ACKNOWLEDGMENTS—Many persons participated in the various activities of the 1977 Census of Manufactures. Primary direction of the program was performed by **Shirley Kallek**, Associate Director for Economic Fields, and **Richard B. Quanrud**, Assistant Director for Economic and Agriculture Censuses (until July 1981).

This report was prepared in the Industry Division under the general direction of **Milton Eisen**, Chief (until February 1980), and **Roger H. Bugenhagen**, his successor. **Arthur W. Horowitz**, assisted by **John S. Berube**, was responsible for overall management of the census and was the Division's liaison officer with other divisions.

Program responsibility was shared by the following individuals who participated importantly in the entire program. **Dale W. Gordon**, Census Durables; **Michael J. Zampogna**, Census Nondurables; **Ruth A. Runyan** (until May 1978), and **John P. Govoni**, her successor, Census Subject Reports; **Paul F. Berard**, Current Durables; **Robert J. Nealon**, Current Nondurables; and **John P. McNamee**, Minerals.

Edward A. Robinson made significant contributions to the basic economic concepts and content of the census. The mathematical techniques used in sampling the respondents were developed by **Donald F. Clark**, assisted by **Preston J. Waite, Gary L. Kusch, Stacey Cole**, and **Marlene Altman. Kenneth I. Hansen**, Chief of the Annual Survey of Manufactures Branch, assisted by **Robert Rosati** and **Stephen Raley**, was responsible for the annual survey component of the census of manufactures. Specifications for the complex computer edit were the responsibility of the staffs of the Statistical Methods and Annual Survey of Manufactures Branches. Computer programs were prepared under the direction of **Howard N. Hamilton** (until November 1978), and **William Norfolk**, his successor. Assisting were **Mary H. Johnson, Sarah W. Mathis, George Anderson, Gerald Turnage, David L. Onions, Robert Brown, Mark I. Kronisch**, and **Barbara Lambert.**

Systems and procedures for mailout and clerical processing were developed in the Economic Surveys Division by **Roger H. Bugenhagen**, Chief (until February 1980), assisted by **Andrew L. Grieco, Robert E. Crowther**, and **Joel Richardson.** Clerical procedures were developed by **Robert Brand**, assisted by **Haydn R. Mearkle, Helen L. Barton**, and **Beverly M. Eng. Walter E. Neece**, assisted by **C. Harvey Monk**, had staff responsibility for industry classification procedures. Administrative record processing specifications were developed by **Lawrence A. Blum** and **John M. Sullivan** under the direction of **Samuel Schweid.** Electronic computer programs for check-in and administrative records were developed and supervised by **Robert G. Willner** and **Donald H. Danbury** under the direction of **Paul E. Poissant.** Data input procedures were developed by **Leonard M. Tauber** and quality control procedures by **Jean F. Biggs.**

Forms design was performed in the Administrative Services Division, **Henry J. Husmann**, Chief (until August 1980). The entire staff of the Forms and Mail Management Branch made significant contributions in planning, design, review, and composition of the forms.

Within the Publications Services Division, many individuals made significant contributions in publication planning and design, editorial review, composition, and printing procurement. These operations were performed under the direction of **Raymond J. Koski**, Chief, assisted by **Milton S. Andersen, Arlene C. Duckett, Gerald A. Mann, Helen M. Curtis, Jacqueline A. Gans, John Overby, Nicholas Preftakes, Rosemary B. Vance**, and **Robert Warunek.**

Clerical and data keying operations were performed in the Data Preparation Division at Jeffersonville, Ind., under the direction of **Don L. Adams**, Chief, assisted by **Robert L. Allen, Rebecca Lamon**, and **George Wilson.** The clerical geocoding effort was directed by **Wendell McManus.**

Computer processing was directed by **C. Thomas DiNenna**, Chief, Computer Services Division. **John E. Halterman, Jesse J. Verdeja, Willie E. Clark**, and **Norman W. Larsen** provided staff assistance.

Lawrence Cox, Statistical Research Division, and **Lawrence E. Cornish**, Systems Software Division, made significant contributions by developing special-purpose computer programs for disclosure analysis and publication preparation.

Donald E. Young, Lawrence H. Lyons, and **Robert S. Taylor**, of the Office of the Assistant Director for Economic and Agriculture Censuses, participated in overall planning and review of the census operations.

Special acknowledgment is also due the many industries whose cooperation has contributed to the publication of these data.

Data in this publication may differ slightly from the industry and area reports previously published. These differences are due to corrections which were made for minor errors identified after the industry and area reports were issued. This report reflects these corrections.

All errors identified in any phase of the review were carried to the computer file used to produce the final subject and special reports. Therefore, those reports represent the most accurate data available.

I. General Background

1. HISTORY OF THE ECONOMIC CENSUSES

General—The economic censuses provide a comprehensive statistical profile of a large segment of the national economy. This program includes censuses of manufactures, retail trade, wholesale trade, service industries, mineral industries, and construction industries. In 1977, these industries accounted for nearly 61 percent of the $1,894.5 billion of the gross domestic product and 70 percent of that originating in the private sector. The principal industry groups not covered were finance, insurance, and real estate; agriculture and forestry; communications; electric, gas, and sanitary services; and transportation. Limited information on transportation is collected, e.g., truck registration and distances travelled, and shipments of commodites by type of transport and distance shipped.

Uses and users of census data—The economic censuses are the primary source of facts about the structure and functioning of a major part of the economy. They are used extensively in compiling the benchmark measures of the national accounts. Census data also serve as weights or benchmarks for indexes of industrial production, productivity, and price; as well as many current surveys of industrial activity.

There is widespread use of the economic censuses, by the Government, in setting economic policy and monitoring economic programs. Manufacturers and distributors rely on census data to measure their potential geographic and industrial markets. The censuses provide the facts needed for economic forecasting; analysis of sales performance; the layout of sales territories; the allocation of advertising budgets; and the location of plants, warehouses, and stores. Trade and professional associations rely on census information to determine how their industries are changing; chambers of commerce and State and local governments depend on them to assess changes in the business structure in their areas. Business magazines and academic researchers rely on census facts as background for many of their articles.

Census reports are purchased by thousands of business and other users; census data are republished and widely circulated by trade associations, business journals, and the daily press; and census volumes are available in all the major public and college libraries.

History—The first economic type census covered the year 1809, when inquiries on manufacturing were included with the 1810 Census of Population. By modern standards, the results of this

pioneer effort would be considered unsatisfactory.[1] However, continued interest in the Nation's economic growth led to successive improvements in economic census-taking during the 19th century. By 1890, the statistical standards and procedures followed in censuses reached a full professional quality.

All of the decennial censuses from 1810 through 1940, with the exception of 1830, included questions on manufacturing. Inquiries on mining first appeared in 1840, and censuses of mineral industries were conducted decennially through 1940. Although some business-related data were collected in 1840, the first census of business was taken for the year 1929. This included retail trade, wholesale trade, and construction; beginning with 1933, selected service trades were covered. Dates of these and other economic censuses from 1809 are shown in table A.

Enterprise statistics—Through the history of the economic censuses, the unit of enumeration has been the establishment—i.e., a single physical location engaged in a specific line of business (for more discussion, see section 8). This unit is best suited for obtaining measures of direct output and input—labor, material, capital, etc. It is also best suited for providing refined industry and geographic tabulations. Statistics measuring overall income and balance sheet data are best collected at the company or enterprise level. In the early 19th century, these two business units were often identical. With the rise of large-scale operations, it became quite common for the large companies to operate separate manufacturing establishments in a number of diverse industries so that today the establishment and enterprise frequently are not the same. Enterprise measures and balance sheet data have typically been provided by the Internal Revenue Service (IRS) in its Statistics of Income and Federal Trade Commission (FTC) in its Quarterly Financial Report of Corporations.

The Bureau of the Census, as a result of the coordinated collection and tabulation of comparable data for several economic sectors in 1954, also developed an enterprise statistics

[1]Actual coverage varied from census to census. [2]Limited information only.

[1] For an appraisal of early censuses of manufacturing, see Meyer H. Fishbein, The Censuses of Manufactures 1810-1890. National Archives Publication No. 63-22, June 1963, Government Printing Office.

program. This program relates census company-level data to data measuring the activities of individual operating units or establishments within the companies. Thus, a measurement of the integration and diversification of the American enterprise system became available. The enterprise statistics program also made it possible to link census establishment-based data on a modified basis to enterprise-based statistical systems such as the IRS's Statistics of Income for Corporations.

Legal provisions—The periodic economic censuses are required by law. Title 13 of the United States Code specifies the frequency of the censuses, the kinds of activities to be covered, the obligation to report, the penalties for failure to report, and the confidentiality of returns. It also authorizes the use of sampling techniques in conducting censuses. As amended in 1964, Title 13 requires the economic censuses to be taken at 5-year intervals, covering the years ending in "2" and "7." The next censuses will cover the year 1982 and will include the census of agriculture, which has been customarily conducted on a different time sequence from the other economic censuses. The pertinent portions of Title 13 are quoted in appendix E.

2. CHARACTERISTICS OF THE INDUSTRIAL SECTOR

General—Manufacturing is the largest sector of the economy. In 1977, manufacturing plants employed nearly 20 million persons, or 20 percent of the civilian labor force of 97.4 million. As shown in table B, gross domestic product (GDP) originating in manufacturing averages almost 24 percent of the total. Wholesale and retail trade combined was the next largest sector with 17 percent of the GDP.

Cyclical changes—The need for frequent and comprehensive statistics on manufacturing derives as much from its sensitivity to cyclical influences as from its relative size. Cyclical changes in income originating in manufacturing tend to be relatively larger than in the economy as a whole, as can be seen in the movement of national income originating in manufacturing from 1929 to 1933 to 1939 in table C.

Within manufacturing, durable goods industries accounted for about 60 percent of all manufactures during recent periods. This category tends to be more volatile than nondurable goods,

[1]Gross national product is the market value of goods and services produced by labor and property supplied by residents of the United States. Gross domestic product is the value of goods and services attributable to labor and property located within the United States. It equals GNP less the "Rest of the world" which is the net inflow of labor and property income from abroad.

generally accounting for a smaller percentage of all manufactures during periods of contraction and a larger percentage during periods of expansion. In the early thirties, for example, as shown in table C, durable goods manufacturing fell to only about one-third of the total.[2]

Geographic distribution—In the early and middle 19th century, manufacturing activity was concentrated in the Northeast. Over the past 130 years, as shown in table D, there has been a steady decline in the proportion accounted for by the Northeastern States. Industry expanded into the north central region in the

[1]Gross national product is the market value of goods and services produced by labor and property of residents of the United States. Gross domestic product is the value of goods and services produced within the United States. National income is gross national product less capital consumption allowances, indirect business taxes, and business transfers plus subsidies less surplus of government enterprises.

Source: Survey of Current Business.

[2] Based on national income rather than gross domestic product (GDP). Industry detail for GDP is available only from 1947; whereas, industry detail for national income is available from 1929 and encompasses the very depressed period of the 1930's.

Table D. **Employment in Manufacturing Establishments by Region: 1849 to 1977**

Year	United States	North-east	North Central	South	West
	Number of employees (thousands)				
1977	19,590	5,008	6,272	5,593	2,717

latter part of the 19th century and, in more recent years, displayed a marked growth in the South and West.

Size distribution—Manufacturing activity tends to be characterized by relative large-scale operations. While there are many small manufacturing plants, they account for a relatively small part of the total output of goods. As shown in table E, over half of the plants covered in the 1977 Census of Manufactures were very small, employing less than 10 workers, but they accounted for less than 3 percent of total manufacturing activity as measured by value added by manufacture. (See appendix A for definition of value added).

Table E. **Number of Establishments and Value Added by Manufacture by Size of Establishment: 1977**

(Cumulative percentage)

Employment size class	Establishments	Value added by manufacture
All establishments	100.0	100.0
1 to 4 employees	40.1	1.0
1 to 9 employees	53.8	2.4
1 to 19 employees	67.6	5.2
1 to 49 employees	82.3	12.2
1 to 99 employees	89.9	20.5
1 to 249 employees	96.0	36.3
1 to 499 employees	98.3	51.0
1 to 999 employees	99.3	65.8
1 to 2,499 employees	99.8	80.1

3. CENSUS OF MANUFACTURES—BENCHMARK STATISTICS

In the farm-oriented economy of the early 19th century, the need for industrial statistics for setting government policy, except for tariffs and taxes, was slight. A few series on physical output of commodities originated either from private sources (flour, iron, steel, etc.) or as a byproduct of tax collection or other government functions (liquors, beer, tobacco products, etc.). The only sources of information on the growing manufacturing sector were the censuses of manufactures, then taken at 10-year intervals. Today, the need for industrial statistics has greatly increased so there is now a vast array of detailed information covering virtually every measurable aspect of industrial activity including employment; payrolls; hours worked; production; prices; inventories; orders; investment in structures, machinery, and equipment; and consumption of raw materials, fuels, and water. Many of these statistics are available at frequent intervals and very promptly after the close of the accounting period. Sophisticated indicators of economic change have also been developed, such as price and production indexes and the gross national product accounts that are published at monthly or quarterly intervals.

The census of manufactures, though conducted only at 5-year intervals, still plays an essential role since no other source measures the structure of the industrial sector in such a comprehensive and detailed way.

For every manufacturing plant with one employee or more, the census obtains data on its input of labor, materials, and capital; its output of products and services; its location; and the legal form of organization of the owning firm.[3]

A set of summary of general statistics are developed for each establishment (that is, total employment, payroll, number of production-worker hours and wages, cost of materials, value of shipments, inventories, capital expenditures, and value added by manufacture) and aggregated by industry, by area, by employment size of establishment, by degree of product specialization within plant, and by type of ownership. Reports are published on the detailed industrial characteristics of each State and large standard metropolitan statistical area (SMSA); and overall measures of manufacturing activity are shown at the county and individual city level provided the information can be published without compromising the confidentiality of individual company data. Since census legislation guarantees confidentiality to the firms that are required to report, it is frequently necessary to suppress some aggregates. Since a significant amount of industry detail cannot be published for the 3,140 counties and county equivalents in the United States, a special computer tape on Location of Manufacturing Plants was developed to provide a complete industry-county cross-section description of manufacturing. This tape includes the number of establishments in each of the 450 industries by county or county-equivalent area, by employment size. Comparison of this complete profile between censuses is used to study shifts in the geographic dispersion of industries and the industrial structure of local areas.

[3] Since 1967, some of this information for 120,000 small companies was not obtained directly but estimated from other government records. See the discussion of coverage of establishments in items 4 and 6.

The census of manufactures also facilitates the conduct of more frequent surveys on a sample basis. In fact, the present legislation specifying that censuses be conducted every 5 years authorizes an annual survey of manufactures (ASM) on a sample basis during the intervening years. The 5-year census provides the framework for selecting a new sample and the periodic universe levels to benchmark the sample estimates. The sample includes about one-fifth of all establishments. All large establishments are included in every sample; the smaller are selected proportionately to their size and are replaced at the end of each census. Thus, there is an annual updating of the census of manufactures in terms of broad measures of economic activity. The ASM contains the same basic measures of economic activity of the plant such as employment, payrolls, value of shipments, value added by manufacture, as does the census of manufactures, but obtains less detailed information on products, materials consumption, and equipment.[4]

The census of manufactures also is used to update other indicators of economic activity, especially the national income accounts. Census data on materials consumed and product output by industry are basic to the input-output matrix developed by the Bureau of Economic Analysis (BEA) for the manufacturing sector. The Federal Reserve Board's monthly Index of Industrial Production—a key indicator of current economic activity—relies on census industry and product data as benchmarks and weights to sum industries to higher levels of aggregation. The census and ASM also provide benchmarks for hundreds of monthly and quarterly surveys of commodity output conducted by the Bureau of the Census, other government agencies, and by manufacturers' associations.

4. INDUSTRY CLASSIFICATION OF ESTABLISHMENTS

Structure of the SIC System—The establishments in the census of manufactures are classified according to the SIC Manual. The SIC Manual covers the entire field of economic activities, subdivided as follows:

Industrial division	Title	Major groups
A	Agriculture, forestry, and fisheries	01-09
B	Mining	10-14
C	Contract construction	15-17
D	Manufacturing	20-39
E	Transportation, communication, electric, gas, and sanitary services	40-49
F	Wholesale and retail trade	50-59
G	Finance, insurance, and real estate	60-67
H	Services	70-89
I	Public administration	91-97
J	Nonclassifiable establishments	99

Below the major group level, the SIC provides for 3-digit groups and finally for 4-digit industries. To illustrate—

Division D—Manufacturing

Major Group. . . . . Food and kindred products
Industry group 202 . . . . . Dairy products
Industry 2023. . . . . Condensed and evaporated milk

The SIC system was developed to classify establishments as distinguished from similar systems used to classify companies or enterprises. An establishment is defined as a single physical location engaged in one of the industry categories of the SIC. (See pp. 1-9 for the application of this definition to collecting data in the economic censuses.)

This SIC system is the responsibility of an intragovernmental technical committee headed by the Office of Federal Statistical Policy and Standards, formerly part of the Office of Management and Budget, but transferred to the Department of Commerce in 1977. The system is used by all Federal Government agencies engaged in the classification of establishments. Many State and local governments and business concerns also organize their own records along SIC system lines in order to facilitate comparison with federal statistics.

The first SIC Manual was issued in 1939. For the manufacturing sector, the nucleus was the set of industry classifications developed over many years for use in the census of manufactures. A revised manual was issued for the manufacturing industries in 1945 and with minor modifications, used in the 1947 and the 1954 Censuses of Manufactures. In 1957, the SIC Manual was extensively revised for manufacturing industries and the historical comparability of some data was seriously affected. The introduction and appendixes to the 1958 census volumes discuss in detail this revision and its effects on census series. Only minor revisions of the SIC Manual were made between 1958 and 1967. The next extensive revision of the SIC Manual affecting the comparability of industry data was completed in 1972. These revisions and their impact on comparability appear in appendix C of the 1972 Census of Manufactures volumes.

Structure of the Manufacturing SIC System—For manufacturing, there are 20 2-digit SIC Major Groups (20 to 39) which are subdivided in 144 3-digit SIC Groups (201 to 399) and into 452 4-digit industries (2011 to 3999). The Bureau of the Census combined some small industries in order to publish data.

Most of the 452 manufacturing industries are defined in terms of specific groups of related products. Usually the products are made of similar materials and by similar processes and many are competitive but the SIC system does not necessarily bring together products which are close substitutes

[4] Since the ASM is based on a sample, the cross-classifications by industry and by area are fewer than in the census of manufactures. At the U.S. level, statistics are published in the annual survey for practically all of the 450 industries. However, at the SMSA level, statistics are published only for 3-digit and 2-digit industry groupings. At the county level, information is published for about 10 percent of the 3,140 counties and equivalent areas. These 300 odd counties are the larger ones in terms of manufacturing activity and account for about 80 percent of total manufacturing employment. Data for cities are shown for those cities having over 20,000 manufacturing employees.

in use and competitive in markets. In determining the boundaries of industries,[5] it is essential that each industry comprise a group of establishments that are highly specialized in making products that define the industry (primary products) and that a large proportion of all the products be made in establishments classified in the industry. While similarity of product is most frequently the determining factor in defining an industry, some industries are defined in terms of the processes or equipment used regardless of the final product of the establishment. (Example: Industry 3361, Aluminium Foundries (castings).) A small number of industries are basically defined by material used as well as final product of the plant. (Example: Industry 2521, Wood Office Furniture, and Industry 2522, Metal Office Furniture.)

There are wide differences among industries in their purity—i.e., the extent to which the establishments classified in the industry:

a. Account for the total production of commodities "primary" to the industry.
b. Produce products or services "belonging" to other industries (that is, secondary products).
c. Use similar materials or processes.

These variations are frequently construed to be shortcomings. However, these limitations in the classification structure arise from the inherent complexity of our economic system and from the variation in types of production that take place in individual establishments.

While the SIC system is the basis for aggregating census data, the data collected, in turn, provide the statistical basis for periodic critical evaluation of that classification system and its revision.[6]

No general-purpose system of industrial classification can satisfy all users of census data. Some business users are interested primarily in a narrow range of products which they and their competitors produce. Others are involved in a wide range of products that move through the same marketing channel. Others seek data relating to the consumers of one or more types of materials. Some are interested only in the data for highly specialized plants; others for plants producing a "full line" of products. Those studying productivity may require data for plants using the same techniques.

The large number of SIC industries provides the analyst with the "building blocks" for making useful approximations, even if specific data cannot be developed to resolve many of these problems. A single general-purpose system of classification can only partially satisfy these diverse needs; a point is soon reached at which the adaptation of a system to serve one use better will reduce its ability (sometimes disproportionately) to serve an alternative use.

Accordingly, users of data frequently regroup detailed SIC industries differently from the 2- and 3-digit SIC categories. The Federal Reserve Board for many years has made combinations to stress such characteristics of products as durable, nondurable, consumer, producer, finished, intermediate goods, etc. Other public and private agencies also recombine the detailed classes. The 4-digit industries are more susceptible to allocation to such categories than the 2-digit SIC groups.

Subindustries—The Bureau of the Census frequently has further classified some of the basic 4-digit SIC industries into "subindustries." Subindustries are employed where there are wide disparities in the input-output relationships (or operating ratios) of the plants in the industry because of differences in the degree of vertical integration, technology, methods of distribution, geographic location, types of materials used, etc. In about 61 manufacturing industries, subindustries were established for editing purposes and many were regarded as significant enough to be used for publication. For example, the bakery industry (SIC 2051) is subdivided into wholesale bakeries, chain-store bakeries, home-service bakeries, and retail multioutlet bakeries; and many apparel industries (major group 23) are subclassified into manufacturers, contractors, and jobbers.

To provide a further measurement of variations with 4-digit industries, the Bureau of the Census also subclassified establishments by the degree to which they produce the primary products or specific classes of primary products of the 4-digit industry into which they are classified. This is, in effect, a subindustry classification based on the degree of product specialization which is published in table 5a in the industry statistics chapters.

Definition of manufacturing—Manufacturing includes a wide range of activities as defined in the SIC Manual. Manufacturing is the mechanical or chemical transformation of inorganic or organic substances into new products. The assembly of component parts of products is also considered to be manufacturing if the resulting product is neither a structure nor other fixed improvement. These activities are usually carried on in plants, factories, or mills, which characteristically use power-driven machines and materials-handling equipment.

Manufacturing production is usually carried on for the wholesale market, for transfer to other plants of the same company, or to the order of industrial users. Typically, manufacturers do not sell directly to the household consumer, although some (for example, baking, milk bottling, etc.) sell, chiefly at retail, to household consumers through the mail, through house-to-house routes, or through salesmen. Some service-type activities (enameling, binding, platemaking, etc.) are included in manufacturing if they are performed primarily for trade; but are considered nonmanufacturing if they are performed primarily to the order of the household consumer. On the other hand, some manufacturing industries include business firms which perform only the entrepreneurial functions

[5] Frequently, business analysts and other data users look at a group of products from more than one point of view. For example, modern high-speed computers are classified as office machines. This describes the purpose of the product. In a physical sense, however, such computers would be described as electronic devices. Similarly, paper bags, wooden boxes, glass bottles, tin cans, and steel barrels may all be classified as containers, or they may be individually grouped with other products of similar materials, such as converted paper products, wood products, glass products, etc.

[6] See Industry Classification and Sector Measures of Industrial Production by James W. McKie, Bureau of the Census Working Paper No. 20, 1965, and Historical Comparability of Census of Manufactures Industries, 1929-1958 by Harold T. Goldstein, Bureau of the Census Working Paper No. 9, 1959.

of buying the materials and designing and marketing the product, but have the actual production done on contract (for example, apparel jobbers).

SIC classifies establishments—The SIC system is an establishment classification system, and the census of manufactures is conducted on an establishment basis. That is, a company with operations at more than one location is required to submit a report for each location. On the other hand, a company engaged in distinctly different lines of activity at one location is required to submit a separate report for each activity if the plant records permit such a separation and if the activities are substantial in size.

The requirement that distinct lines of activity at the same location be separately reported was applied only where the establishment produced and shipped significant amounts of products classified in different SIC industries. In widely varying degrees, many manufacturing establishments make products that fall into different SIC industries. Generally, the amounts involved are not significant enough to warrant the filing of separate reports, even if feasible. However, there are a number of locations at which large numbers of employees are engaged in activities defined in different industries of the SIC system. Frequently, companies organize their operations and their records separately for the diverse activities and report them as separate plants. When they do not do so on their own initiative, the Bureau of the Census requests separate reports if it appears that 100 or more employees are involved in each activity. For the most part, companies have cooperated and "split out" the different activities which would otherwise significantly distort the relationship of the industry and product statistics. Not infrequently, however, the two groups of products are made on the same production lines by many of the same employees and cannot be distinguished sufficiently in company records to provide establishment-type reporting.

The SIC system also recognizes special situations where otherwise separately classifiable activities frequently occur at one location. For example, the definition of Industry 2421, Sawmills and Planing Mills, recognizes that sawmills may include logging operations. Similarly, pulpmills operated in combination with papermills are included in one report.

Establishments included in census of manufactures—For the 1947 Census of Manufactures, the censuses have included only establishments with one employee or more. Prior to 1947, different criteria were used to determine if an establishment had to report in the census. In the censuses of 1921 through 1939, establishments with less than $5,000 value of products were excluded. For 1899 to 1919, the limit was $500. The change in the minimum-size criterion to an employment basis in 1947 did not appreciably affect the overall comparability of earlier census figures, except for the number of establishments.[7]

A sample survey of manufacturing plants with no paid employees was conducted in conjunction with the 1958 census. While there were nearly 52,000 establishments in this category in that year, they accounted for only about one-quarter of 1 percent of the total value of shipments of all manufacturing industries. The proportion was higher for certain industry groups such as lumber and wood products, and printing and publishing. Tabulation of IRS data for 1977 indicates that manufacturers with no paid employees continue to be of very minor importance. They contribute less than one half of 1 percent of the total value of shipments of all manufacturing industries.

Special treatment of very small establishments—Beginning with the 1967 census, an effort was made to relieve the very small establishments from the necessity of filing a census report. Approximately 120,000 small single-unit manufacturing firms identified as having less than 10 employees benefited from this procedure. Limited data on payrolls, sales, and industry classification from the administrative records of the Social Security Administration (SSA) and the IRS were made available to the Bureau of the Census for use in the 1967, 1972, and 1977 economic censuses. (These special arrangements safeguarded the confidentiality of both tax and census records.) Data other than payrolls and sales for these small establishments were estimated from historical industry ratios. The effect on industry aggregates is slight in most industries; for manufacturing as a whole, these small "administrative records" account for only 1.2 percent of the value added. Detailed product and materials data for these small establishments were not estimated; the entire value of product shipments and cost of materials was imputed to a "not specified by kind" (n.s.k.) category. If these establishments had been included in the 1972 Census of Manufactures, they were assigned the industry classifications to which they had been coded. If they had started business later, they were coded on the basis of brief descriptions of the general activity of the establishment as reported to the SSA. Where the description is incomplete or there are relatively fine lines of demarcation between industries or between manufacturing and nonmanufacturing activity, the code assigned to an establishment could differ from that which would have been assigned on the basis of more complete product information. Therefore, the Bureau of the Census conducted a special classification survey in order to clarify the industry codes of some of the establishments in the adminstrative record file. All establishments without specific 4-digit codes and those where there could be significant misclassification between manufacturing and other sectors were sent such a questionnaire. Nevertheless, the total establishment counts in most industries should be viewed as approximations rather than precise measurements. The counts for establishments with 20 employees or more are far more reliable than the total number of establishments.

Auxiliary units—Manufacturing requires a wide range of diverse support activities. These activities include movement to the manufacturing plant, storage, the operation and maintenance of plant and equipment, the design of flow of work through the production process, and necessary arrangements for shipment of output to customers. Also included are a host of subsidiary activities associated with the operation of an establishment (for example, management and policy formation, product and market orientation, engineering and quality control,

[7] This point is discussed at greater length in the Introduction to the 1947 volumes.

recordkeeping and accounting, physical security of plant and equipment, and the like).

Support and subsidiary activities may be performed by personnel located at the manufacturing establishments or at a separate location serving one or more manufacturing locations of the same company. These separate locations are referred to as administrative offices and auxiliaries, where these activities are carried on at a different physical location or are performed for more than one plant, they are excluded from the figures for operating manufacturing establishments and are included in the data shown for administrative offices and auxiliaries. (See the description of the questionnaire used for these establishments, form NC-X6, in item 7.)

Border-line activities—The following types of activities, while having some of the characteristics usually found in manufacturing, are considered as nonmanufacturing and, therefore, are excluded from the census:

a. Processing on farms when the raw materials are grown on the farm and the manufacturing activities (poultry dressing, milk and butter production, logging, etc.) are on a small scale without extensive use of paid labor. Also custom milling, egg hatching, cotton ginning, and similar activities closely associated with agriculture are excluded.
b. Mineral preparation such as the crushing, screening, and concentrating of ores. However, mining performed as a secondary activity in conjunction with manufacturing is included in the census unless a separate report for the mining activity was filed; for example, stone and clay mining at cement, lime, and clay products plants.
c. Custom work to the individual order of household consumers. Examples are custom tailoring, woodworking, lettering on monuments, setting of diamonds, and the making of orthopedic appliances.
d. Repair and other service activities, except specified services performed "for the trade." Repair shops of railroads are also excluded.
e. Production of coke "for own use" by establishments owned by public utility companies.

Census establishment-based data measures manufacturing as primary activity. In the census of manufactures, no attempt is made to measure the extent of manufacturing at locations which are not primarily manufacturing plants, such as retail establishments which sell most of their products on the premises directly to household consumers (retail bakeries,[8] ice cream stores, etc.), or manufacturing by construction contractors at the site (for example, production of paving mixtures).

Conversely, it is not unusual for manufacturing establishments to engage also in some nonmanufacturing activities such as repair work, merchandising of products without further processing, and installation work. Ordinarily, these nonmanufacturing receipts are small in relation to the manufacturing activities and, therefore, it is not difficult to determine that the establishments should be included in the manufactures area. However, if the nonmanufacturing activities account for a significant proportion of total receipts of an establishment, the classification of that establishment into the appropriate major economic sector is more difficult.

In the economic censuses, an establishment engaged in a combination of manufacturing and merchandising is assigned either to the manufacturing or the trade industries depending on which of these activities was estimated to account for the larger share of its "value added" or "income produced." This criterion, even though based on approximation, was considered preferable to treating each dollar of receipts from each type of activity equally in determing the primary industry, since manufacturing requires considerably more worker-hours, salaries and wages, and capital inputs per dollar of receipts than either wholesaling or retailing. However, in classifying establishments engaged in manufacturing and also in mining, repair work, installation, construction, or other nonmanufacturing services, dollar receipts were used as the basis of classification because these activities require substantially comparable input per dollar of receipts.

Product codes—The SIC coding system is designed to describe industries and operates in such a way that the definitions become progressively narrower with successive additions of numerical digits. There are 20 very broad 2-digit groups, 144 3-digit groups, and 452 4-digit industries. Based on the SIC Manual, the Bureau of the Census has developed a product coding system along similar lines which contains about 1,500 5-digit product classes and approximately 13,000 individual 7-digit products. (See "the classification of products and materials" below.) The 7-digit products and 5-digit product classes are considered the primary products of the industry with the same first four digits as the product code. For example, the 7-digit product code number 2023212 refers to canned evaporated milk. The first five digits of this code number, 20232, refer to the "product class" canned milk, and the first four digits, 2023, refer to the industry in which these products are made (the condensed and evaporated milk industry). The same system is applied to the coding of materials. The first four digits of a material code (for example, the code number 024111, whole milk used as a material) describe the industry that produces it; e.g., 0241, agricultural industry, dairy farms.[9]

This SIC-based system is simpler than other systems for the coding of industrial products and materials used, since there is a direct numerical relationship between commodities and industries. Complications occur in the few SIC industries defined in terms of processes or equipment used as well as products made. As an example, women's sweaters are produced in knitting mills (industry 2253) and also in cut-and-sew shops (industry 2339). To retain the industry-of-origin concept, therefore, it is necessary to assign different product code numbers to women's sweaters, depending on where they are made.

The SIC-based commodity classification is used in the Bureau of the Census' entire industrial statistics program, including

[8] Separate data for retail bakeries with baking on the premises were included in the retail census publications.

[9] See tables 6a and 7 in volume II.

monthly, quarterly, and annual surveys, and also in the census of wholesale trade. The Bureau of the Census also publishes data on imports and exports in terms of SIC-based categories as well as the traditional Schedule B and TSUSA systems.[10]

Primary and secondary products of establishments shown in the industry statistics chapters—An establishment is classified in a particular industry if its production of the primary products of that industry exceeds in value its production of products of any other single industry. The industry code assigned to the establishment is derived from a summation of values for 7-digit product codes to their 4-digit industry and the selection of the largest 4-digit value as the establishment's industry classification. However, as mentioned earlier, the industry classification of an establishment may be determined not only by the products it makes but also by the processes employed or materials used in making those products.

While some establishments produce only the primary products of the industry in which they are classified, it rarely happens that all the establishments in an industry specialize to this extent. Therefore, the general statistics (employment, payrolls, inventories, value added by manufacture, total value of shipments, capital expenditures, etc.) shown for a industry (tables 1 to 4), encompass not only the primary activities of the establishments in that industry but also their secondary activities. On the other hand, the product statistics in tables 5a and 6a measure the total output of specific products whether they are produced by establishments classified in the same industry as the product or not. For this reason, in relating the general statistics of an industry, especially the industry total value of shipments (tables 1 to 4), to the product statistics (table 6), the composition of the industry's output as shown in tables 5b and 5c should be considered. Table 5c is a matrix table in which the columns break down industry shipments into primary and secondary products and "miscellaneous receipts." The rows of the table show the amount that each industry produced of a given product class.

The extent to which industry and product statistics may be matched with each other is measured by the two ratios shown in table 5b which are computed from table 5c. The first of the ratios, called the primary product specialization ratio, is the proportion of product shipments (both primary and secondary) of the industry made up of primary products. The second, defined as the coverage ratio, is the proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

Degrees of integration—In many industries, establishments use a wide variety of processes and materials to make the products of the industry. An industry classification based on end products may include establishments which are vertically integrated and those which put only the finishing touches on an already highly-fabricated purchased item. For example, in the refrigeration industry, there are some establishments that are almost completely integrated, producing the compressor and condensing unit, electric motor, and even the castings for those intermediate products, as well as the stamping of the case and the final assembly. In other plants, the condensing unit, the motor, and the case may be purchased and merely assembled into the finished product.

In some instances, nonintegrated plants have been placed in separate industry categories from the integrated plants. In many industries, the census provides separate statistics on departmental operations or on the production of intermediate commodities made and used in the producing plant. When an industry includes plants which ship a significant proportion of their output to other plants of the same company, separate figures are usually shown on the interplant transfers.

These differences in the integration of production processes, types of operations, and types of materials used, should be taken into account when relating the general items (employment, payrolls, value added, etc.) to the product and materials data. Where integrated operations are of consequence in an industry, that fact is pointed out in the explanatory text.

Industry code resistance—The production of many establishments is so evenly divided among two or more industry-determining product groups that the industry codes could change from year to year (industry codes can be based on less than half of the total value if there are three or more groups). In the ASM, plants had always been prevented from shifting back and forth among industries due to minor shifts in product mix in the years between censuses by the application of a "resistance formula" in assigning industry classifications. In census years, such resistence was not applied.

A resistance formula of the ASM type was first used in the 1963 Census of Manufactures. In the 1977 census, the formula was applied only to establishments included in the 1976 ASM sample panel with certainty (that is, included with a probability of "1"). In general, these certainty cases were establishments of companies with at least one manufacturing plant with 250 employees or more.

The formula recognizes the conflicting need to maintain continuity in the establishment composition of an industry to measure change and the need to allow establishments to be reclassified to measure the current composition of the industry.

In the 1977 census, the industry classification of a certainty establishment was allowed to change from that assigned in 1976 under one of the following conditions:

a. The value of the 1977 primary products constituted 60 percent or more of its total value of product shipments.

b. The value of the 1977 primary products, while less than 60 percent of the total, was at least twice the value of products which had determined the 1976 industry code.

c. The value of the 1977 primary products, while not meeting either of the two above conditions, had been the largest group of products for at least two years, i.e., exceeded the value of the 1975 primary industry's products in both 1977 and 1976 by at least 20 percent.

[10] Schedule B is the U.S. export classification while TSUSA is applied to imports.

Table F. **Value Added by Manufacture for Regions, Divisions, and States: 1977**

Region, division, and State	Value added by manufacture (million dollars)	United States, total (percent)	Region, division, and State	Value added by manufacture (million dollars)	United States, total (percent)
United States[1]	585,165.6	100.0	South Region--Con.		
Northeast Region	138,746.4	23.7	South Atlantic Division--Con.

Virginia	10,882.0	1.9	Hawaii	785.5	.1

[1]Total value added differs slightly from summation of the individual States since a few establishments that could not be accurately coded to a State are included in the United States total.

5. GEOGRAPHIC CLASSIFICATION

Census divisions and regions—The 1977 Census of Manufactures measures industrial activity at the State, county, city, and standard metropolitan statistical area levels. In prior censuses, similar information was also provided for the traditional nine geographic divisions (e.g., New England, Middle Atlantic, etc.) and the four geographic regions (northeast, south, north central, and west).

The presentation of data for individual industries and industry groups at all these geographic levels has always created serious problems in protecting the confidentiality of individual company data. Consequently, it has frequently been necessary to set priorities as to what will be published (see item 21). In the past, the preference was given to publishing data for the broad geographic regions over States leading to greater suppression of industry detail at the State level. In recent years, there has been increasing interest in State information in preference to the broader regions. As a result, the 1977 Census of Manufactures gave first precedence to publishing State figures. A decision was also made to forego publication of any divisional and regional totals. This was desirable to avoid suppressing industry detail in one State that could have been published, in order to protect data for another State in the same division, that had to be suppressed to preserve the confidentiality of a respondent's figures.

Thus, some summary tables for the nine geographic divisions and four regions that were published in prior censuses do not appear in Volume III, Area Statistics, of the 1977 Census of Manufactures. (See table F for 1977 value added data for regions, divisions, and States.)

Standard metropolitan statistical areas—In addition to the data for the legally constituted geographic units (States, counties, and cities), all manufacturing totals are shown for approximately 280 SMSA's.[11] In the 1977 tables, detail for 2-, 3-, and 4-digit industries is shown for an SMSA if data for individual companies would not be disclosed, and the industry had at least 250 manufacturing employees. These are the same criteria as those used in the 1972 census. In censuses prior to 1967, detail had not been shown for SMSA's with under 40,000 total manufacturing employment, and only industry group figures were shown for SMSA's with 40,000 to 190,000 employees.

SMSA's are integrated economic and social units with a large volume of daily travel and communication between the central city (having 50,000 or more population) and outlying parts of

[11] See appendix F for a description of each SMSA.

Table G. **The 50 Largest SMSA's Ranked by Value Added by Manufacture: 1977 and 1972**

Standard metropolitan statistical area	Number of employees (thousands)	Value added by manufacture (mil. dol.)	1977 rank	1972 rank	Standard metropolitan statistical area	Number of employees (thousands)	Value added by manufacture (mil. dol.)	1977 rank	1972 rank

Atlanta, Ga.	128.7	4,222.8	24	27	Nashville-Davidson, Tenn.	80.5	1,935.3	50	(1)
Seattle-Everett, Wash.	131.9	4,161.0	25	28					
Kansas City, Mo.-Kans.	117.8	4,119.9	26	21					

Note: The Flint, Mich., SMSA, falls within the top 50 SMSA's but is excluded from this table to avoid disclosing figures for individual companies.

[1]Not in the top 50 SMSA's. [2]New Kent County added in 1977.

the area.[1,2] Each area (except in New England) consists of one whole county or more. An area may contain not only highly industrialized counties but also adjoining counties which, though primarily residential in character, contribute significantly to the industrial counties' labor force and are socially and economically integrated with the central city. These areas were defined by the Federal Committee on Standard Metropolitan Statistical Areas for general-purpose use in presenting economic and social data. In the New England States, similar integration criteria have been applied in defining SMSA's, but on a city and town basis, because towns are regarded as the significant unit in this region of the country.

The requirement that each SMSA consist of county units (except in New England) sometimes results in the inclusion in an area of a considerable amount of territory which would not ordinarily be considered "metropolitan," much less "industrial." It is recognized that metropolitan areas could be more accurately defined in terms of smaller area segments such as minor civil divisions, but the usefulness of areas so defined would be limited by the fact that many types of economic and social data are available only on a county basis. Periodically, the SMSA's are redefined. While some changes can be made at any time, if there are serious reasons, the major restructuring of SMSA's occur after each census of population is completed. Appendix F describes the current SMSA's and the changes since 1972.

Each SMSA is designated by the name of the principal city of the area. In addition to the name of the principal city, the areas title may include one or two additional city names.

Value added by manufacture in all SMSA's accounted for 79 percent of the U.S. total in 1977. The relative importance of the 50 largest SMSA's in 1977 and their rankings in the 1972 and 1967 censuses are shown in table G.

[1,2] Each SMSA must include either (1) a city with 50,000 or more inhabitants, or (2) a city having a population of at least 25,000 which (a) with the addition of the population of contiguous places has a population density of at least 1,000 persons per square mile; (b) constitutes, for general economic and social purposes, a single community with a combined population of at least 50,000; and (c) includes a total population of at least 75,000 in the county or counties in which the city and contiguous places are located.

Standard consolidated statistical areas (SCSA's)—In many highly urbanized areas of the country, SMSA's tend to border on one another. For some purpose, it was desirable to treat them as one geographic area and the SCSA's were developed. Each SCSA includes two or more contiguous SMSA's which meet specific criteria of size, urban character, integration, and contiguity of

urbanized areas. As with the SMSA's, the SCSA's are defined by the Federal Committee on SMSA's of the Office of Management and Budget. Their number has increased from two in the 1972 census to 13 for 1977. All manufacturing totals appear in table 4 of each State chapter. Data for 2-, 3-, and 4-digit industries with 250 manufacturing employees or more are published in table 6.

Industrial counties—In addition to industry statistics for SMSA's, table 7 of each State report presents data by county for each industry group (2- and 3-digit) and industry (4-digit) that had at least 450 manufacturing employees if it would not disclose figures reported by individual companies.

Cities with 450 manufacturing employees or more—Summary totals and industry detail at the 2-, 3-, and 4-digit levels are shown for individual cities with 450 manufacturing employees or more, provided the data do not disclose information for individual companies.

II. Methods

6. PLANNING AND PREPARATION

General—The Bureau of the Census has an obligation to meet public needs for timely and reliable information while holding costs and the burden on respondents to a minimum. During the planning stages of each economic census, the advice of trade and professional associations, Federal and State government agencies, individual companies, labor unions, and research and educational organizations is sought in an effort to reach both the users of data and the respondents who supply the basic figures. Simultaneously, the problems encountered in the previous censuses are studied, and improved methods of collection, processing, and tabulation are explored.

Mailing lists—Beginning with the 1954 economic censuses, the basic mailing lists have been obtained from IRS and SSA records. These records were also sampled to develop statistics for retail and service establishments with no employees. After the 1963 censuses, feasibility studies indicated that greater use could be made of the data in the IRS-SSA records. In the 1967 censuses, over 2,000,000 firms were exempted from the filing requirement, including 120,000 small manufacturers. Instead, census-type statistics for this group were developed from IRS-SSA records. In close cooperation with IRS and SSA, specific procedures for the use of individual tax returns that assured confidential treatment of them were developed and set forth in Executive Order No. 10911, dated January 17, 1961, and Treasury Decision No. 6547 of the same date. The records used were business income tax returns (IRS forms 1040C, 1065, 1120, and 1120S) and payroll tax returns (IRS form 941). The name and address, payrolls, and gross business receipts were obtained from these reports, in addition to the SIC industrial activity code assigned by SSA. Other census statistics for these small firms were imputed using industry average ratios of the data item to payrolls and sales.[13]

This procedure was repeated in the 1972 and 1977 economic censuses. In 1972, there was a concerted effort by the Bureau of the Census to improve the industry coding of the administrative record by mailing a nature-of-business inquiry to establishments whose industry codes could have been affected by the 1972 revision to the SIC Manual. A similar effort was made in 1977 to clarify the classification of firms which SSA had not been able to code precisely.

Content of questionnaires—As in previous censuses, the content of the 1977 questionnaires was developed in consultation with a large number of organizations and individuals, representing both the manufacturers who supply the data and those who use the statistics. Those consulted included Government agencies, individual firms, labor unions, the American Statistical Association, the American Economic Association, the American Marketing Association, the National Association of Manufacturers, and all National Manufacturers' Associations covering specific industries.

Many individual manufacturers and their trade associations were consulted about the content of the sections of the report forms dealing with the output of specific products. Drafts of the proposed 1977 product sections were circulated among 800 trade associations and about 4,000 manufacturing companies, both large and small. These draft report forms included new product detail reflecting suggestions received by the Bureau of the Census after the 1972 canvass. Small items (those valued at $7.5 million or less) were not retained in the list unless they were needed to assure correct classification of other products or were of strategic importance. A restriction was placed on proposals for additional detail; it was stipulated that the 1977 value of any new product category should exceed $20 million. The manufacturers were requested to comment specifically on the availability of the data requested in their ordinary records, and the appropriateness of the product descriptions and units of measure.

The thousands of comments and suggestions received in this clearance procedure and the decisions reached were forwarded to the Office of Federal Statistical Policy and Standards, along with the product sections developed by the Bureau of the Census as a result.

A final review was made by the Office of Federal Statistical Policy and Standards with the assistance of the Advisory Council on Federal Reports. The latter organization is a group of business executives such as controllers, economists, and market research directors, representing a cross section of all industries.

[13] As discussed elsewhere in this introduction, the amount of imputation introduced by this procedure was only about 1 percent of the overall totals.

7. REPORTING FORMS

A representative selection of the reporting forms used in the census is reproduced in appendix D. The users of each of them are discussed below.

General forms—These forms were used in the economic censuses, generally, either as companywide reports or as reports for establishments whose classification was not known precisely in advance of mailing.

NC-X1, Report of Company Organization—This companywide report was used prior to mailing the 1977 census questionnaires to develop the directory of establishments operated by multiunit companies. A more detailed account of their use is given in Section 8, The Mailing Lists.

NC-X2, Listing of Additional Establishments—This form was included with the census of manufactures forms mailed to multiestablishment companies in order to obtain a list of establishments that were acquired after the NC-X1A was filed. These additional plants were classified, added to the NC-X1A directory list, and mailed the appropriate 1977 economic censuses report forms. Plants under construction but not in operation were requested to report the value of construction put in place during 1977 and the total gross book value of assets in place at the end of the year.

NC-X3, General Schedule—This questionnaire was designed to obtain information from small companies for which the industry code available in the SSA records was not precise enough to indicate which one of the standard census questionnaires should be mailed. The information provided on form NC-X3 was used to classify these companies by industry and tabulate their data in the appropriate census.[14]

NC-X6, Administrative Offices or Auxiliary Establishments—Many multiunit companies maintain separate establishments to provide centralized administrative management, or other supporting services for other establishments of the same company, but not for the general public or other companies. They were asked to complete form NC-X6 for those establishments. The form contained questions on the approximate number of employees engaged in such functions as centralized administration, research and development, warehousing, and other auxiliary activities, and on the cost of research and development work performed by these nonmanufacturing establishments. The respondent was also asked to describe the industry activity of the operating establishments serviced by the centralized office or auxiliary unit reporting on form NC-X6.

NC-K1, Company Summary Report—Each multiunit company with 250 employees or more received a form NC-K1, Company Summary Report, in addition to a specific questionnaire for each establishment. The NC-K1 requested consolidated company totals for receipts, new capital expenditures, inventories, and fixed assets, which are published as part of the Bureau of the Census' Enterprise Statistics Program described in section I.

Census of manufactures forms—The questionnaire reproduced in the appendix, form MC-36B, is typical of the approximately 200 forms used for operating manufacturing establishments. Each of these forms was designed to be used for a specific group of industries. Since it is desirable to retain comparability in the annual survey of manufactures for establishments reporting in the sample, form MA-100 was substituted as the front sheet of the census form (e.g., MC-36B) to collect the information common to all industries. Whether or not form MA-100 was used, the inquiries on the 200 forms were identical except for the detailed questions on products shipped, materials used, and miscellaneous topics such as operations performed, equipment used, and delivery of products.

Short forms—Some industries include a large number of small- to medium-sized firms that account for a significant portion of the industry's output. Usually, these firms are not so small that the limited data in the administrative record files would meet the needs of the census. To obtain sufficient data, yet hold the reporting burden down for these smaller firms, special abbreviated short forms were designed. They obtain the key input and output statistics without the detail requested on the standard forms. A sample form is included in appendix D.

Annual survey of manufactures forms—Form MA-100 is the establishment report used in the ASM since 1949 (with modifications). The establishment's 1976 data were imprinted on the report form before mailing, thus aiding the respondent in following the instructions for the census. Item 11-A, "value of products shipped and other receipts," on form MA-100, corresponds to item 18 on the census forms such as MC-36B.

In years between censuses, the ASM collects data for broad classes of products; whereas, every 5 years, in the census, item 18 calls for information or individual product shipments.

Other related forms—Form CB-50F, Census of Distributive Trades Electrical Goods, which is reproduced in appendix D, is typical of the several forms used for wholesale establishments in the census of business. Some manufacturers operate their own wholesale establishments which the Bureau of the Census classifies as "manufacturers' sales branches and sales offices." The wholesale forms differed only in the kinds of products sold as listed in item 10. Item 18 provides the information needed to classify the establishment as a sales branch or sales office.

MC-171, Department of Defense Establishments, and MC-D4, Penal Institutions—These forms were used to collect information on government-owned and government-operated manufacturing establishments. They were used for two types of establishments:

[14] The use of form NC-X3 is also discussed in item B, Mailing Lists.

a. Manufacturing facilities owned and operated by the Department of Defense.
b. Prison industries (Federal, District of Columbia, and State).

The data were prepared with the cooperation of the Department of Defense, the Department of Justice, and the District of Columbia and State prison systems. For Department of Defense installations, information was provided on employment, worker-hours, payrolls, cost, and value of work done, by industry group and by State. For prison industries, however, only product data were requested. The data are presented in a special report included in volume I and are not included in the totals for operating manufacturing establishments.

8. MAILING LISTS

General—As discussed in item 6, the list of respondents for 1977 was obtained from IRS-SSA records. Since the IRS-SSA lists consist essentially of the names and addresses of companies rather than establishments,[15] it was necessary to follow separate procedures for multiunit companies (those operating at more than one location).

The precanvass—Multiunit companies were required to file at least one establishment report[16] covering each location. In order to mail the appropriate questionnaires, it was necessary to determine the type of activity at each location operated by multiestablishment companies. The Bureau of the Census has conducted an annual update of its directory of establishments operated by large companies in which Report of Company Organization (form NC-X1)[17] is mailed each year to multiunit companies.

All of these forms consist of a report on company affiliation and a list of the domestic establishments operated by the company. The company's establishments as identified in census records are prelisted and the respondents are asked to correct this list. They are also asked to describe new establishments not prelisted and indicate their approximate size.

Large multiunit companies are segregated for special handling because of possible overlaps and duplication. Many of these companies are active in retail and wholesale trade as well as in manufacturing. The reporting instructions are reviewed in discussions with officials of the accounting departments of many of these firms to make certain that the procedure is understood and the establishments are properly described on form NC-X1.

Single-unit companies—The mailing lists for single-unit companies (those operating at only one location) were developed from an initial control file assembled from IRS and SSA records. Out-of-scope companies (those whose activities were not to be surveyed in the economic censuses) and those identified as multiunits in the multiunit directory were removed. A special survey of out-of-scope companies with more than 50 employees was conducted, in some industries, to make certain they should not be included in the census. Some names were added to the mailing list as a result. Single units with over 150 employees were mailed form NC-X1 to determine if they were multiunits.

The final step was to identify the small companies which were not to be mailed because census-type statistics were to be developed from administrative records. The remaining records constituted the mailing lists for single-unit companies.

General schedule—While these lists generally contained adequate industry information to determine the proper form for mailing, a number of the records did not have precise industry information associated with them. Form NC-X3, General Schedule, which is reproduced in appendix D was mailed to these companies. Since it was assumed that these companies were quite small, only a few key figures were requested. The completed reports were coded and included in the tabulations. If form NC-X3 indicated that the company was actually large, it was later requested to file one or more of the appropriate standard questionnaires.

9. COVERAGE AND ACCURACY

Since the list of companies obtained from IRS and SSA records was considered to be complete, no field coverage check was conducted. The precanvass and other special procedures for multiunit companies described in item 8, Mailing Lists, and item 11, Data Collection, were designed to secure complete lists of establishments; thereby simplifying the IRS-SSA company list. Control totals, in terms of employment and payrolls of multiunit companies, were also used to verify the completeness of establishment coverage.

It was possible to compare statistics tabulated from the census of manufactures with the Bureau of the Census' Current Industrial Reports Series, or with data originating with other agencies and, thus provide a further confirmation of completeness and accuracy. These figures range from employment and wage totals compiled by the Bureau of Labor Statistics to detailed commodity output figures published by the IRS, the Fish and Wildlife Service, and the Department of Agriculture. In this volume, differences between the census of manufactures and other statistics are explained wherever possible. Census of manufactures comparability with broad measures such as national income, new capital expenditures, and production indexes are discussed elsewhere in this introduction. The Bureau of the Census' other procedures designed to improve the accuracy of the census data are discussed above in the items on data collection and processing.

[15] The SSA records for multiunit companies identify "reporting units," which in many instances correspond to census establishments. The differences are such, however, that it was found necessary to obtain up-to-date lists of establishments as described in this section. Also, the Bureau of the Census concept of a company differs from the IRS-SSA definition, since the census company includes all establishments under common ownership or control. In the IRS-SSA records, subsidiary corporations are often treated as independent companies.

[16] If two or more distinct lines of activity were carried on at one location, separate reports were obtained under some circumstances. (For a complete discussion, see "Establishment Basis of Reporting" in section 4.)

[17] This form is reproduced in appendix D.

A discussion of the valuation of intracompany shipments by multiunit companies is included in item 15.

10. GEOGRAPHIC CODING

Accurate and complete information on the physical location of each establishment is required in order to tabulate the census data by standard metropolitan statistical areas, counties, and cities. As in previous censuses, the post office address and ZIP code of the establishment were not always accepted as defining the physical location, but respondents were required to describe the actual location in terms of street address; city, town, or village; county; and State. For establishments located in rural territory, the name or number of the nearest highway was requested and the distance from the nearest town or other urban place.

In censuses prior to 1963, clerks assigned geographic code numbers to each establishment based on the description furnished by the respondent. This process was slow and required careful verification. Beginning with 1963, a computerized system was developed which assigned an area code number and a prefix symbol to the mailing address before the questionnaires were mailed. The prefix symbol indicated whether or not the mailing address was clearly acceptable as describing the physical location. If there was any question about its acceptability, the respondent's description was later carefully reviewed after the questionnaire was received. The assignment of tentative code numbers by the computer was based on extensive reference files containing nearly a million business names and addresses.

11. DATA COLLECTION

Although the greater use of administrative records in 1977 substantially reduced the number of companies canvassed directly, there remained nearly 2 million which were required to file, including about 205,000 manufacturers. Small manufacturers, for whom the administrative records sufficed, numbered about 145,000. The assembly of several hundred different questionnaires into mailing packages correctly labeled and coded, combined with the correct instruction booklets, was an extensive operation.

Most of the 1977 questionnaires were mailed by mid-January 1978 with a due date of February 15. The collection phase was completed by late July 1978.

Companies which did not return their questionnaires by the due date had to be reminded that their returns were overdue. In all, there were five routine followups. Telephone calls were made to the large companies to help with reporting problems and to request that the forms be completed and returned.

Estimates based on data from administrative records were included in the census tabulations for the relatively small number which had not responded by the closeout date in July 1978. Thus, reported or estimated data for all companies and establishments in the original mailing list (except those determined to be inactive during 1977) were included in the final statistical results. A special effort was made to obtain actual returns from all large firms, so that the dollar volume of business represented by proxy returns was relatively very small.

12. DATA PROCESSING

General—The editing,[18] coding, and tabulation of data for the 5 million establishments represented in the 1977 economic censuses was a complicated task. Automatic data processing and other advanced techniques were used in all phases.

The questionnaires were mailed from and returned to the Bureau of the Census office at Jeffersonville, Ind., where most noncomputer (that is, clerical) processing operations were performed. The returns were screened to identify major problems that could be resolved by routine correspondence with respondents. Acceptable data were placed on a key-to-disc system, and the encoded data sent to Washington, D.C. on a high-speed transmission system. The Washington, D.C. staff handled computer operations and all operations in connection with the use of IRS and SSA records.

Preliminary screening—After they were checked in and assigned geographic codes, the questionnaires were reviewed clerically to see that they conformed to certain minimum requirements before further processing. For multiunit companies, the sum of employment and payrolls reported on its establishment questionnaires was compared with the control totals received on IRS form 941. Questionnaires received on single-unit forms were reviewed to ascertain whether they had become multiunits through merger or acquisition. Questions arising in the screening operation were resolved by writing or telephoning the respondents. Complex problems were referred to the Washington, D.C. professional staff.

Computer editing—As in the 1972 Census of Manufactures, most of the review for consistency among data items and completeness was done on the computer. Average values and tolerance limits for key operating ratios (for example, cost of materials per dollar of shipments, payroll per employee, production-worker wages per hour, etc.) played a fundamental role in the editing process. More than half of all 4-digit SIC industries had one or more data cells changed by more than 5 percent as a result of the application of these programs.

A detailed description of the step-by-step processing procedures appears in the Bureau of the Census publication, History of the 1977 Economic Census. This volume describes the procedures followed in both the centralized overall processing and in the individual censuses such as manufactures.

[18] In data processing, the term "editing" means the review of information collected on questionnaires or from other sources, with the objective of locating and correcting erroneous entries.

III. Comments on Statistical Measures and Tables

(Explanations and definitions of the various measures of activity for which statistics are compiled in the census of manufactures are presented in appendix A. In the following text, the limitations and other characteristics of some of these measures are discussed, the content of the statistical tables is described, and comparisons with other statistical series are presented.)

13. EMPLOYMENT AND PAYROLLS IN ADMINISTRATIVE OFFICES AND AUXILIARIES

In the industry statistics chapters, the data on employment and payrolls are limited to operating manufacturing establishments. In the summary tables and the area reports, the employment and payrolls of administrative offices and auxiliaries are included as well. The report filed for administrative offices and auxiliaries requested a description of the activity of the establishments that they serviced. However, the administrative offices and auxiliaries were coded only to the 2-digit industry group of the establishments they served, whereas the operating establishments were coded to a 4-digit manufacturing industry. In most of the tables with industry detail, the administrative offices and auxiliaries are shown as a separate industry group, but statistics for them by 2-digit industry appear in each volume in the general summary tables. As indicated in table H, the relative importance of administrative offices and auxiliaries has increased substantially in recent years because of a tendency to centralize functions formerly performed in manufacturing plants. Such functions include accounting (particularly where computerized), warehousing repair services, and miscellaneous others.

Table H. **Employment in Administrative Offices and Auxiliaries and in Operating Manufacturing Plants: 1977 and Earlier**

Census year	Employees in operating manufacturing establishments		Employees in administrative offices and auxiliaries		
	Thousands of employees	Percent change from previous census year	Thousands of employees	Percent change from previous census year	Percent of total employment[1]
1977	18,516	+2.7	1,074	+8.0	5.5
1972	18,032	-2.5	994	+19.8	5.2
1967	18,492	+14.0	830	+14.3	4.3
1963	16,235	+5.3	726	+20.6	4.3
1958	15,423	-1.4	602	[1]+32.9	3.8
1954	15,645	(NA)	453	(NA)	2.8

(NA) Not available.

[1]The apparent increase from 1954 to 1958 is believed to be somewhat overstated, because coverage of administrative offices and auxiliaries was more complete in the 1958 census.

Source: Census of Manufactures.

14. MATERIALS CONSUMED

Every establishment was requested to report the total cost of materials. In addition, quantity and cost information was collected for approximately a thousand specific materials. About 350 of these were "complete coverage" materials; i.e., every industry that consumed appreciable quantities of the material was canvassed so that the data would aggregate to at least 90 percent of manufacturing consumption. For the remaining materials, information on consumption was obtained only in those industries in which the materials were important inputs. Detailed consumption information was collected in item 17, the standard material inquiry; in item 18, the product inquiry (for items that were produced and consumed in the same plant); and in a few instances in a special inquiry. The resulting statistics are presented mainly in tables 6a and 7a of the industry statistics chapters.

Because American industry uses an enormous variety of materials, the choice of materials for which "complete coverage" consumption data (90 percent or higher) were obtained had to be strictly limited. The selection of a particular material for such coverage was based on the following criteria:

a. The importance as measured by the total value of U.S. consumption of the material.
b. The percentage of total consumption accounted for by manufacturing establishments.
c. The availability of consumption information from manufacturers' records.
d. Other factors such as the strategic importance of the material or the availability of historical data on the use of the material.

The "limited-coverage" materials were chosen, not only because they constituted important inputs for particular industries, but frequently because they provided information necessary to classify plants by SIC industry. In using the detailed data on materials consumed which appear in table 7 in the industry statistics chapters, of the following limitations should be noted:

a. Materials were reported for the establishment as a whole and no attempt was made to ascertain how much of the material was used in each of various products. Thus, the industry totals appearing in table 7 include consumption in secondary products as well as primary products

of the industry. The extent of secondary production in each industry is measured by its specialization coverage ratio shown in table 5b of the industry chapters.

b. Special attention should be paid to the codes ending in "000" and captioned "materials, parts, containers, and supplies, n.s.k." The amounts appearing on these lines are totals imputed for (1) establishments whose statistics were developed from administrative records, and (2) totals for establishments which returned report forms but failed to report their consumption in specific terms. Thus, for most industries, the data for a specific material are understated. A judgment on the statistical significance of the understatement may be made from the ratio of the value shown for the "n.s.k." (code 000) to the total of materials, components, parts, containers, and supplies for the industry.

c. Establishments consuming less than a specified amount of material were not requested to report consumption of the material separately. For the majority of individual materials, the minimum amount was $10,000. The use of this cutoff is not believed to have had a significant effect on the totals, although in 1972 a lower cutoff of $5,000 was used.

d. A total of "n.e.c." material code 970099 was collected on most forms and is published for each industry. This is the total cost of materials for an industry for which no material items were prelisted on the form. A sample survey, MA-131, 1977 Supplemental Survey of Materials Consumed, was conducted to provide material consumption estimates for the cost of materials reported in material code 970099 for selected industries. Results of this survey are shown in the subject report Selected Materials Consumed.

15. VALUE OF SHIPMENTS

Value of shipments of multiunit companies—Except for a few industries, the respondents were instructed to report net selling values, f.o.b. plant, after discounts and allowances and excluding freight charges and excise taxes. Multiunit companies were instructed to report for each establishment as if it were a separate economic unit and, in particular, to report interplant transfers at their full economic value. Full economic value is defined as not only the cost of production but also a reasonable proportion of company overhead and profits. Generally, there is no advertising or other selling cost assigned by companies to interplant transfers, so it would be expected that the value per unit of such transfers would be less than that for commercial sales. To assure consistency in the valuation as the interplant transfer moved though the company, the plant receiving the transferred goods was instructed to include them in its cost of materials at the same value as at the shipping point, plus the cost of freight and other handling charges.

If the goods were transferred to sales branches, or sold through separate sales offices, the "f.o.b. plant" instruction implies that the value is somewhat lower than the final invoice value, because the cost of selling (mainly the cost of operating the sales branch or office) is excluded.

However, there is reason to believe that these instructions were not followed uniformly by all companies. In a record-keeping practice study of 54 multiunit companies conducted a few years ago, it was found that about half of them had reported interplant transfers of semifinished products at commercial or market prices, which tend to be somewhat higher than the "cost plus overhead and profit" requested in the census instructions. Where finished products were transferred to separate selling organizations, half of the companies interviewed valued the products leaving the manufacturing plant at their final or invoice price, or somewhat higher than the requested "f.o.b. plant" transfer value. It appears from this study and other observations that the value of shipments of products reported by multiunit companies tends to be overstated. If it was known that a substantial amount of a product tended to be transferred to establishments of the same company, separate quantity and value figures were requested on the amount transferred and the amount sold outside the company. Data on these shipments, the unit value of which tends to be different from the unit value for shipments outside the company, are presented separately in table 6a in the industry statistics chapters.

Individual products—In the 1977 census program, information was collected on the output of approximately 13,000 individual product items.[19] A "product" as used in the census of manufactures is the finest level of detail for which output information was requested. It is not necessarily synonymous with the term "product" as used in the marketing sense. In some cases, it may be much more detailed and, in other cases, it is more aggregative. For example, there is a long list of pharmaceutical preparations but a single item for all canned meats. If detailed production figures were available from other government sources or reliable private surveys, it was not considered necessary to request extensive detail in the census.

Some 6,000 of the product items were listed separately on the 1977 census report forms. Data for the remaining 7,000 products were obtained monthly, quarterly, or annually in commodity surveys of the current industrial reports program of the Bureau of the Census. Totals for the year 1977 for these items compiled in the commodity surveys are shown in table 6a, "products shipped," in the industry statistics chapters. On the 1977 census forms, only an overall control total or "tieline" was obtained. In table 6a, both the tieline total and the total of the detail obtained in the current industrial reports are shown to indicate how closely the two surveys were reconciled.

Typically, both quantity and value of shipments were collected. However, physical quantity measures are not meaningful for some product lines, and for these, only value of shipments was collected. If a product was used to a large degree in the fabrication of other products within the same establishment in which it was produced, total quantities produced and often the quantities consumed were collected. Information on production, as well as shipments, was also collected for products for which there are significant differences between the two

[19] See 1977 Census of Manufactures MC77-R-1, Numerical List of Manufactured Products.

because of wide fluctuations in finished goods inventories. Alternate measures of output of products, such as value of work done for products with long production cycles, were used as appropriate and feasible.

Classes of products—The individual products were aggregated into classes of products which were, in turn, grouped into the primary products of each industry. In the code structure, a 7-digit number is assigned to the individual product, a 5-digit code to the class of product, and a 4-digit code to the total primary products in an industry. (See section 4 for application of coding structure to the assignment of SIC codes for establishments).

The 13,000 product items in the 1977 census (including products from the current industrial reports program) were grouped into approximately 1,500 separate product classes. General similarity was the basis for the product class combinations within each 4-digit industry, i.e., kind or use of products, the manufacturing processes, type of markets, or materials used. The economic significance of the class was also taken into account; residual products of an industry were grouped when the dollar value of the products did not warrant separate classes.

Since preserving confidentiality of the data of respondent companies is a determinant of the amount of detail that can be published, the larger number of respondents included in the product-class shipments totals permit many more cross tabulations than do the 7-digit products. In the industry statistics chapters, product classes by State appear in table 6b and by industry of the establishment producing them in table 5c. The latter table clearly shows the primary and secondary product mix of an industry, as well as the interrelationship between the 4-digit industry value of shipments and the 4-digit product group value of shipments.

It is possible to classify individual establishments not only by 4-digit industry, but also by the largest class of products they produce within that industry. Table 5a provides finer industry-type general statistics for establishments classified according to the degree to which they specialize in producing a specific class of products.

The class-of-product concept was incorporated by the Bureau of the Census into the 1947 Census of Manufactures after it developed the technique in the compilation of World War II production statistics. Product classes were used to collect product information in the first ASM conducted in 1949. The product classes tend to be redefined more frequently than the SIC on which they are based in order to keep abreast of the growth and decline of products.

Effect of use of administrative records on product data—As noted elsewhere in this Introduction, 140,000 small manufacturers were not mailed report forms and most of their detail was imputed based on limited information in IRS and SSA administrative records. All of the value of products of these small establishments were coded only to the 4-digit products of the industry in which they were classified. These product shipment are uniquely identified in table 6a. Also uniquely identified are product shipments of reporting companies which were described too generally to code below the 4-digit level. Frequently, these were residuals in the company's records which the company felt it could not further break down. Table I, summarized by 2-digit group, reflects the importance of these "n.s.k." product shipments. Except in a few industries, they tend to be moderate in size—except in lumber, furniture, and printing (SIC 24, 25, and 27). The "n.s.k." of the respondents tends to be larger than that of the administrative records.

One factor tends to reduce the value of products, n.s.k., attributed to administrative record companies that affects table I, particularly. In some 4-digit industries, there is only one product category (an example is Industry 3273, Ready-Mixed Concrete). Administrative-record estimates for these products were treated as specific information and not tabulated as "n.s.k." headings.

In using the data for the specific 7-digit products shown in table 6a, the importance of the "n.s.k." has to be considered. The shipments of individual products tend to be understated somewhat in proportion to the size of the "n.s.k." Census-to-census comparison of 7-digit products should be made with caution if there has been a significant increase or decrease in the importance of the n.s.k.

16. DUPLICATION IN COST OF MATERIALS AND VALUE OF SHIPMENTS

The aggregates of the cost of materials and value of shipments figures for industry groups, and for all manufacturing industries, include large amounts of duplication since the products of some industries are used as materials by others. With some important exceptions, such as SIC 3312, Blast Furnaces and Steel Mills, this duplication is not significant within individual 4-digit industries. However, it is significant at the 2- and 3-digit industry levels because these group totals often include industries which are successive stages in the production of a finished manufactured product. Examples are the addition of flour mills to bakeries in the total value of shipments of SIC major group 20 and the addition of pulpmills to papermills in group 26. Economists have estimated that the value of manufactured products exclusive of such duplication—the value of finished manufactures—tends to approximate two-thirds of the total value of shipments reported in the census of manufactures.

Because the amount of duplication of the cost of materials in the value of products figures cannot be measured with any degree of precision, caution is urged with the use of the value of shipments totals at the 2- and 3-digit industry group levels.

Even where there is no significant amount of duplication within an industry group, value of shipments figures are not the best measures of the relative economic importance of individual manufacturing industries or geographic areas. There are wide variations in the ratio of materials, labor, and other processing costs to value of shipments; both among industries and within the same industry. The manufacturing process contributes only a small amount to the sales value of some products; but a large amount to the final value of others. Value added by manufacture is a better measure of the net contribution of an industry to the Nation's overall output.

Table I. **Value of Products, Not Specified by Kind: 1977 and 1972**

Product group code	Total value of product shipments (mil. dol.)		Products not specified by kind											
			Total (mil. dol.)		Large companies (mil. dol.)		Small companies (mil. dol.)		Percent attributed to--					
									Total		Large companies		Small companies	
	1977	1972	1977	1972	1977	1972	1977	1972	1977	1972	1977	1972	1977	1972

37	161,607.6	91,522.0	1,999.9	1,413.5	1,084.9	1,126.8	915.0	286.7	1.2	1.5	.7	1.2	.6	.3
38	26,949.1	14,484.8	1,277.4	556.1	662.6	413.8	614.8	142.3	4.7	3.9	2.5	2.9	2.3	1.0
39	17,254.1	11,270.0	2,373.3	1,521.7	1,600.1	903.2	773.2	618.5	13.8	13.5	9.3	8.0	4.5	5.5

Note: These values are product shipments, irrespective of the industry in which the products were made and exclusive of miscellaneous receipts, and, therefore, differ from the industry group totals shown in the general summary tables. However, products primary to more than one product group are classified based on the industry in which they were made. Data for some product groups may differ slightly from the data collected in order to avoid disclosing operations of individual companies which have previously been withheld from the tables 6a of the 1977 and 1972 Censuses of Manufactures Industry Series.

17. VALUE ADDED BY MANUFACTURE

General—The first step in the calculation of value added is the conversion of the value of shipments (including resales and miscellaneous receipts) to value of production by adding the ending inventory of finished foods and work in process inventories and subtracting the beginning inventory. The cost of materials (including materials, supplies, fuel, electric energy, cost of resales, and cost of contract work) is then subtracted from this value of production to obtain value added.[20]

Value added avoids the duplication in the value of shipments figure which results from the inclusion of the shipments of establishments producing materials and components, along with the shipments of establishments producing finished products. It does not exclude the cost of services purchased from other business firms, as does the concept of value added, used in the national income accounts.[21] Nevertheless, it is considered to be the best value measure available in census data for comparing the relative economic importance of manufacturing among industries and geographic areas.

Gross national product, national income, and value added—The national income accounts provide two measures of national output or value added originating in manufacturing: (1) gross national product (GNP), or, more precisely, gross domestic product (GDP),[22] and (2) national income without capital consumption adjustment. These two measures are statistically different and neither is completely comparable to census value added.

GDP originating in manufacturing is the net value of the output of goods and services produced in the U.S. at market prices before deductions for depreciation charges and capital consumption allowances. It differs, in part, from the census value added since it includes indirect business taxes (e.g., sales, excise, and property). Excise and sales taxes are excluded from the f.o.b. census value of shipments and, thus, from census value added. Property taxes are part of the cost of doing business included in census value added, since only the cost of materials is deducted from f.o.b. shipments. A greater difference between GDP and census value added rests in the exclusion of purchased business services from GDP, but not from census value added. Both GDP and census value added include the basic factor costs of production—labor costs, property costs including depreciation, and profits. Depreciation in the two series is calculated differently, however. The census collects depreciation as carried on the books of the establishment. Thus, it tends to be the depreciation

[20] For a few industries (for example, ship building) where value of work done is substituted for value of shipments, no adjustment is made for change in inventories. In a few other industries where value of production is collected, the inventory adjustment is made only on the basis of change in work-in-process inventories.

[21] Collection of data on the cost of purchased business services at the plant level presents many problems. Advertising by multiunit companies, for example, is frequently charged at the company level and the cost either not allocated to plants or, if allocated, are only included as part of a broader company overhead category. National income data, on the other hand, are compiled, in part, from company rather than plant data, such as the IRS Statistics of Income in which advertising is presented as a separate cost item based on company reports.

[22] Gross national product is the market value of goods and services producted by labor and property supplied by *Residents* of the United States. Gross domestic product is the goods and services attributable to labor and property *located within* the United States.

charged against the original purchase price of the plant or equipment on a tax return basis. In calculating GDP, these tax return allowances are adjusted to account for the economic service lives, straight-line depreciation, and replacement cost.

In compiling the national accounts, it is necessary to rely on two different sources of data: (1) establishment-based data similar to the census for labor income, and (2) company-based data for profit and other company level income and cost charges. In estimating the GDP for manufacturing, the property-type incomes, interest, depreciation, and profit have been reestimated to an establishment basis by the Bureau of Economic Analysis (BEA). Thus, conceptually, both the GDP and value added tend to be on a comparable establishment-industry basis.

In the national accounts, 2-digit detailed statistics within manufacturing are compiled only on a national income basis, without the capital consumption adjustment. National income differs from GDP by the exclusion of indirect business taxes and capital consumption allowances, but before the capital consumption adjustment. Unlike GDP, it remains a mixture of establishment-based data and company-based data for profits and company-type costs. This results in the inclusion in national income of the net value added created by nonmanufacturing establishments of companies primarily engaged in manufacturing, but the exclusion of value added created by manufacturing plants of primarily nonmanufacturing companies. It is thought that this tends to raise the national income attributed to manufacturing. This effect can be seen in the petroleum and coal products industry group where nonmanufacturing activities are so significant that national income exceeds value added (see tables J and K).

Table K provides a year by year comparison of GDP and national income to value added. GDP tends to be 10 to 20 percent lower. In recent years, there are some erratic variations in these relationships. In part, this is thought to be the result of the different treatment of the change in inventory that is used in the two series. The census inventory figures are book value inventories and, thus, a mixture of last-in-first-out (LIFO) and first-in-first-out (FIFO) and other historic accounting methods. In the national income accounts, these inventories are converted to current prices comparable to the prices used to value the GDP, and, thus, the change in inventories is on a current-priced value consistent with sales. Significant differences occur in the change in book value and currently-priced inventories in years of rapidly changing prices. The magnitude of these differences can be partially judged by the size of the inventory valuation adjustment used by BEA (see table L).

Reconciliation of GDP and value added—In recent years, the census and the annual survey of manufactures have been obtaining data on some of the residual costs included in census value added. As a result, it is possible to reconcile in more detail the differences between GDP and value added in manufacturing. In table M, the census value added, at $585.2 billion, exceeded GDP at $462.4 billion. When indirect business taxes (other than property taxes) are deducted from GDP, it drops to $444.0 billion, or $141.2 billion less than census value added. The labor components of the two series are reasonably close, although not identical. Census depreciation, on a book value basis, however,

[1]Source: Revised estimates of gross domestic product by major industries, Survey of Current Business, July 1978, p. 28; National Income and Product Accounts.

[2]In comparing gross domestic product and national income originating in manufacturing with value added, the role of change in inventories must be recognized. Census value added is value of shipments less the cost of materials adjusted for the change in book value inventories (finished goods and work in process in most industries.) Gross domestic product and national income originating in manufacture include the change in business inventories as part of gross private domestic investment. In the National Income Accounts, the book value change in inventories is adjusted for change in prices to convert it to prices similar to those used to measure the value of output. This adjustment is referred to as the inventory valuation adjustment. In periods of significant inflation, such as 1974, this adjustment can be substantial and create a slower year-to-year growth in gross domestic product originating than in value added in manufacturing, so there is a drop in gross domestic product and national income originating as a percent of value added in manufacturing. In periods of stable prices, the movements of the two inventory series usually are similar.

[3]Value added for 1947 and earlier years is unadjusted.

Table L. **Change in Manufacturing Inventories: 1977**

(Billion dollars)

Item	Value
Change in book value inventories (census)	$13.4
Inventory valuation adjustment	-8.4
Change in inventories (gross national product)	5.0

Note: In calculating gross national product, the Bureau of Economic Analysis uses the change in total inventories. In compiling value added, the Bureau of the Census typically uses finished goods and work in process inventories only. In 1977, these inventories were $9.3 billion compared with total inventories of $13.4 billion.

Source: U.S. Department of Commerce, Bureau of Economic Analysis.

is less than the GDP capital consumption allowance, adjusted for economic service lives, straight-line depreciation, and replacement cost. Census book-value depreciation was $26.7 billion, the adjusted GNP capital consumption allowance, $40.0 billion. After measurable labor costs and depreciation were deducted, unexplained census value was $231.4 billion compared with an explained GNP of $81.4 billion. Census has not been able to measure all the remaining components of value added, especially those parts which are company-type charges and profits. In 1977, information was collected on rentals and cost of communication services, and maintenance and repair purchased from other companies, a total of $22.4 billion, leaving the unexplained portion of value added at $209.0 billion. If the GDP estimates of $9.9 billion for property taxes and $71.4 billion for profits and interest payments are applied to this, there is a final unexplained portion of value added amounting to $127.7 billion.

This residual is attributable to company overhead other than central office payroll, e.g., company-level depreciation, business taxes, and purchased services (advertising, legal, accounting, and other professional services, patents, royalties, etc., not readily measurable separately at the plants).

18. CAPITAL EXPENDITURES AND GROSS ASSETS

Capital expenditures—The manufacturers were instructed to report expenditures of the type chargeable to fixed assets

Table M. COMPARATIVE STATISTICS ON CENSUS VALUE ADDED AND GROSS DOMESTIC PRODUCT: 1977

(Billion dollars)

Item	Census value added	GDP
Total	—	462.4
Less: Indirect tax (except property) business and not subsidies[1]	—	18.4
Equals	[1] 585.2	444.0
Less: Compensation of employees total	327.1	322.6
Census payrolls of operating plants	242.0	—
Census payroll supplements of operating plants	49.9	—
Census payrolls of central offices and auxiliaries	[2] 22.0	—
Census payrolls of sales branches offices	[2] 13.2	—
Equals	258.1	121.4
Less. Additional cost measured by census of manufactures	49.1	40.0
a. Included in GDP: Capital consump. allowance[3]	26.7	40.0
b. Excluded from GDP	22.4	—
Purchased communication service	3.6	—
Purchased maintenance and repairs	11.9	—
Rental payments, building and equipment	6.9	—
Equals: Residual costs included in census value added	209.0	81.4
Less: Costs or incomes assumed to be equal to those measured in GDP	93.6	81.3
Property tax	9.9	9.9
Interest and profit type income	71.4	71.4
Difference between census book value depreciation and GDP depreciation[3]	12.3	—
Equals: Remaining costs in value added (company overhead, other than payrolls included above: e.g., company-level depreciations, business taxes, and services purchased by company or directly by plants (advertising, legal, accounting, and other professional services; communications, patent fees, royalties, travel costs, etc.)	115.4	(.1)

[1] Census measures value of shipments exclusive of sales and excise taxes. Property taxes are a cost included in value added.

[2] There is strong evidence that most companies include the payroll of administrative offices and auxiliaries and all sales offices in setting the f.o.b. value of shipments from their manufacturing plants. Those costs are, thus, included in value added. Many companies also indicate that they include the cost of sales branches, although this may not be universally true (see "value of shipments" in text).

accounts, for which depreciation reserves are normally maintained. Actual capital outlays during the year were requested, not the final value of equipment put in place or structures completed during the year.

The Bureau of the Census estimates of capital expenditures tend to be lower than those published by BEA in its quarterly survey of expenditures for plant and equipment. In addition to normal sampling variation, a major source of difference rests in the scope of the two series. Census data relate only to manufacturing establishments.

The BEA series relating to manufacturing includes all establishments of manufacturing companies, nonmanufacturing as well as manufacturing, but excludes manufacturing establishments of companies that they have classified as chiefly nonmanufacturing. This difference in the two series is particularly important in the petroleum industry where company expenditures for developing new wells and new distribution facilities are ordinarily much larger than their capital expenditures at refineries. The BEA and Census data for recent years are shown in tables N and O.

Table N. Expenditures for New Plant and Equipment—BEA Series and Census: 1977 and Earlier Years

(Billion dollars)

Year	BEA-series[1] (A)	Census (census of manufactures and ASM)[2] (B)	Column B divided by column A (C)
1977	69.2	47.5	.69
1976	59.9	40.5	.68
1975	54.9	37.3	.68
1974	53.2	35.7	.67
1973	42.4	27.0	.64
1972	35.4	24.1	.69
1971	33.6	20.9	.62
1970	37.0	22.2	.60
1969	36.3	22.3	.61
1968	32.3	20.6	.64
1967	32.3	21.5	.67
1966	31.4	20.2	.64

1961	15.5	9.8	.63
1960	16.4	10.0	.61
1959	13.8	9.3	.67
1958	13.0	9.6	.74
1954	12.0	8.2	.68
1947	8.7	[2]6.0	.69

[1] Source, U.S. Department of Commerce, Survey of Current Business, October 1980.

[2] Excludes data for establishments under construction but not yet in operation.

[3] Capital consumption allowances in GDP and depreciation as collected in the census are not completely comparable. Depreciation reported in the census is that carried on the books of the establishment and is charged against the original purchase cost of the assets. In the GNP accounts, a "capital consumption adjustment" is made to place the depreciation more on a replacement cost basis. Specifically, it is "the tax-return-based capital consumption allowances, less capital consumption allowances, that are based on estimates of economic service lives, straight-line depreciation, and replacement cost."

[1]Source: U.S. Department of Commerce, Survey of Current Business, October 1980.

Gross value of fixed assets—In addition to reporting capital expenditures during the year, the manufacturers were requested to report the original cost value of fixed assets (structures and machinery and equipment) in place at the end of the year, along with depreciation and retirements during the year. This series, however, is based on reports filed in the ASM sample. It is conceptually comparable with the capital expenditures data. As the census capital expenditures series differs from the BEA series, so the census gross assets series will differ from similar series based on company level reports, i.e., those appearing in the IRS Statistics of Income and the FTC Quarterly Financial Report of Corporations. Since the census assets series is also based on sample estimates from the ASM, it is subject to a sampling error. (See appendix A for more complete definitions of terms.)

19. INVENTORIES

The value of end-of-year inventories held by each manufacturing establishment was obtained for each year. Separate information was requested for—

a. Finished goods,
b. Work-in-process, and
c. Materials, supplies, fuel, and other inventories.

A measure of the changes in inventories from the beginning to the end of each year is essential to the conversion of value of shipments during the year to value of production, and, therefore, to the calculation of value added. The ratios of inventories to shipments at different times are also used in analysis of trends and business-cycle movements. For the best use of all of these measures, the inventories should be valued in the same prices as the shipments. Census inventory statistics have some limitations in these uses.

The inventories, as collected currently and in the past, have been the inventories as carried in the books of each respondent. In aggregating those inventories and calculating inventory changes, census procedures make no adjustments for the different methods of inventory valuation used by the respondents. Change in inventories and the relationship of inventories to shipments can vary significantly depending on whether last-in first-out (LIFO) or some historical method such as first-in first-out (FIFO) is used. These differences can become very significant in periods of rapid- and large-price changes. In recent years, the Bureau of the Census has been obtaining information on the preparation of inventories valued by the different accounting methods, both in its monthly surveys and the annual survey of manufactures. Some results have been published in the monthly Manufacturers' Shipments, Inventories, and Orders survey but none for the ASM. Considerable difficulty has been encountered in obtaining results of publication quality because of the complexity of the accounting at the establishment level and corporate level in large companies. Unofficial results have been made available to BEA to assist them in their adjustment of book value inventories to current and constant prices for use in the national income accounts. Some of the anomalies in the census value added and the national income originating in manufactures are due to the different treatment of inventory change in the two series.

In using inventory data by stage of fabrication for all industries at the industry level, it should be noted that an item treated as a finished product by an establishment in one industry may be reported as a raw material by another establishment in a different industry. For example, the finished-product inventories of a steel mill would be reported as raw materials by a stamping plant. Such differences are present in the inventory figures by stage of fabrication shown for individual industries, industry groups, and all manufacturing which are merely aggregates of figures reported by establishments in specified industries.

For a few industries in the food group, there are special problems in the handling of inventories by stage of fabrication. These are industries in which the products are aged. Included among such types of products are stemmed and dried tobacco, cheese, and whiskey. It is not clear whether such products should be treated as finished-goods inventories or as work in process while in storage. In all these industries, substantial finished goods inventroies have been reported. These data have been summarized in the inventory tables in a consistent manner for all of the years included in this report.

20. PLANT SPECIALIZATION

As discussed in item 4 above, the primary products of a plant are those which determine its industry classification; all other products are referred to as secondary products. The value of a plant's primary products in comparison to its total production is referred to as its degree of specialization. For each plant, two measures of specialization were computed:

a. A 4-digit primary product-specialization ratio, which is the sum of the values of all the plant's primary products divided by the sum of all its primary and secondary products.

b. A 5-digit primary product-class specialization ratio, which is the sum of the largest 5-digit product-class value divided by the sum of its primary and secondary products (the miscellaneous receipts of the establishment were not included in these calculations). For example, assume that an establishment reported the following:

Total value of shipments and other receipts	$1,000
Miscellaneous receipts (resales, etc.)	15
Total value of products shipped	985
32731, Concrete pipe products	100
32722, Precast concrete products	785
32730, Ready-mixed concrete	100

This plant would be coded into Industry 3272, Concrete Products, with a primary product specialization ratio of 90 percent ($885 ÷ 985); it would be subclassified into the 5-digit Class 32722, Precast Concrete, with a primary product class specialization ratio of 80 percent ($785 ÷ 985).

21. CONFIDENTIALITY

The Bureau of the Census is prohibited by law from publishing any statistics that disclose information reported by individual companies. In suppressing figures to avoid disclosing information of individual companies, individual States are given precedence over geographic regions and divisions. This is an innovation for 1977, since in prior censuses the larger geographic areas were given precedence. As a result of this change in philosophy, it has become more difficult to produce industry detail for the larger geographic areas and data for the these areas are no longer published. States are given precedence over standard metropolitan statistical areas; standard metropolitan statistical areas over counties; and counties over cities.

In tables showing industry detail, major industry group (2-digit) totals take precedence over industry group (3-digit) totals which, in turn, take precedence over individual (4-digit) industries. Similarly, in product tables, 4-digit product groupings take precedence over 5-digit product classes and the latter over individual 7-digit products.

Such order of precedence was used because:

a. It was considered preferable to show State data for an industry, even at the cost of withholding data for a region. In recent years, there seemed to be more need for and use of data for individual States than for the larger regions—especially since many regional development programs encompassed clusters of States different from the standard regions and divisions.
b. By giving preference to industry-group statistics over individual industries within each State, the extent to which individual States can be compared within the SIC industry classification framework is greatly increased.

22. MICROFICHE AND COMPUTER TAPES

Data in many tables in the census volumes are available on microfiche and on computer tape.

One major data series, the Location of Manufacturing Plants, will be available only on computer tape. This series presents the number of establishments by employment size class by 4-digit SIC industry codes for States, counties, and places of 2,500 inhabitants or more. These data are available for both State and county by industry and State and place by industry.

Microfiche reports and computer tapes are sold by Customer Services (Microfiche/Tapes), Data User Services Division, Bureau of the Census, Washington, D.C. 20233.

23. SPECIAL TABULATIONS

Special tabulations of data collected in the 1977 Census of Manufactures may be obtained on computer tape or in tabular form. The data will be in summary form and subject to the same rules prohibiting disclosure of confidential information (including name, address, kind of business, or other data for individual business establishments or companies) as are the regular publications.

Special tabulations are prepared on a cost basis. A request for a cost estimate as well as exact specifications on the type and format of the data to be provided, should be directed to the Chief, Industry Division, Bureau of the Census, Washington, D.C. 20233.

24. ABBREVIATIONS

The following abbreviations and symbols occur frequently in text, tables, and footnotes:

—	Zero
(X)	Not applicable
(NA)	Not available
(D)	Withheld to avoid disclosing operations of individual companies
n.e.c	Not elsewhere classified
n.s.k.	Not specified by kind
(S)	Suppressed
(Z)	Less than one half of unit of measure shown
lin.	Linear
equiv.	Equivalent
hp	Horsepower
kWh	Kilowatt-hours
SIC	Standard Industrial Classification
IRS	Internal Revenue Service
SSA	Social Security Administration
ASM	Annual Survey of Manufactures
CIR	Current Industrial Reports
BEA	Bureau of Economic Analysis
SEC	Securities and Exchange Commission
GNP	Gross National Product

Other abbreviations, such as lb, gal, yd, doz, and bbl, are used in the customary sense. Where the term "tons" only is used, it refers to short tons of 2,000 pounds; where the figures are expressed in tons of 2,240 pounds, the unit of measure is specified as "long tons" or "gross tons."

Data in this publication may differ slightly from the industry and area reports previously published. These differences are due to corrections which were made for minor errors identified after the industry and area reports were issued. This report reflects these corrections.

USERS' GUIDE IN LOCATING STATISTICS BY TABLE NUMBER IN THE INDUSTRY CHAPTERS

(For explanation of terms, see appendix A)

	Item	4-digit industry statistics		
		Historical	Operating ratios	By geographic area
1	Number of manufacturing establishments	1a		2
	Employment and payroll:			
2	Number of employees	1a	1b	2
3	Payroll	1a	1b	2
4	Supplemental labor costs			
5	Production workers	1a	1b	2
6	Production worker hours	1a	1b	2
7	Production worker wages	1a	1b	2
	Shipments, cost of materials, and value added:			
8	Value of shipments (4-digit)	1a	1b	2
9	Product class shipments (5-digit)			
10	Product shipments (7-digit)			
11	Value added by manufacture	1a	1b	2
12	Cost of materials	1a	1b	2

(NA) Not available.

[1]The figures for 1939 to 1977 include data for employees at manufacturing establishments who were engaged in distribution and in construction work. The extent to which data for such employees were included in the figures for earlier years is not known. In addition to the employment and payroll for operating manufacturing establishments, manufacturing companies reported separately for administrative offices or auxiliary units (e.g., research laboratories, storage warehouses, power plants, garages, repair shops, etc.) that service the manufacturing establishment(s) of a company. These data are included in the total employment, payroll, and establishment figures for the years 1949 to 1977.

[2]The method of compiling these figures varied, as follows: All employees: For 1955 to 1977, figures represent the average of the number of production workers for the payroll period ended nearest the 12th of March, May, August, and November, plus all other employees for the payroll period ended nearest the 12th of March; for 1949 to 1954, they represent an average of all employees for the payroll period ended nearest the 12th of March, May, August, and November; for 1947, an average of 12 monthly figures for all employees; and for 1939 and prior years, the average number of production workers based on 12 monthly figures, plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1949 to 1977, figures are based on employment for the payroll period ended nearest the 12th of March, May, August, and November; and for 1947 and prior years, they represent the average of 12 monthly figures.

[3]For the period 1954 to 1977, value added by manufacture represents adjusted value added, and for earlier years, unadjusted value added. Unadjusted value added is obtained by substracting the cost of materials, supplies and containers, fuel, purchased electric energy, and contract work from the value of shipments for products manufactured plus receipts for services rendered. Adjusted value added also takes into account (a) value added by merchandising operations (that is, the difference between the sales value and cost of merchandise sold without further manufacture, processing, or assembly), plus (b) the net change in finished goods for work-in-process inventories between the beginning and end of the year. For 1849 to 1933, cost of contract work was not subtracted from value of shipments in calculating value added by manufacture.

[4]The figures for 1951 to 1977 include expenditures for plants under construction and not yet in operation. This information was not collected prior to 1951.

Footnotes are continued on next page.

[5]Source: Board of Governors, Federal Reserve System.

[6]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[7]The 1958 and subsequent years figures include establishments classified in Industry 3273, Ready-Mixed Concrete, and establishments classified in Industry 3599, Machinery, Except Electrical, N.E.C., that were engaged exclusively or almost exclusively in machine shop repair work. The data for such establishments are excluded from the figures for the period 1939 to 1957, but are included for 1929 and earlier years. The 1954 to 1966 figures include data for establishments engaged in the processing and distribution of fluid milk, Industry 202, Dairy Products. These establishments were not included in the figures for earlier census years. In addition, beginning with 1954, the figures include data for Industry 2411, Logging Camps and Logging Contractors, which were not included within the scope of the 1947 census. There were also a number of changes in the definition of manufacturing industries during earlier census years that affect the comparability of the historical series. Among the more important of these were the following: Figures for 1935 and later years exclude data for railroad repair shops and manufactured gas, which were included in 1899 to 1933 figures; the minimum size of establishment included for 1947 to 1966 was one employee; for 1921 to 1939, manufacturing establishments reporting value of shipments of $5,000 or more were within scope; whereas, for 1919 and earlier years, the cutoff was $500. (These changes in procedure have not appreciably affected the comparability of the historical data except for the figures on number of establishments.)

[8]The figures for 1939, but not for earlier years, have been revised on the basis of retabulation of the returns to exclude data for establishments classified as manufacturing in 1939 and prior years but classified as nonmanufacturing beginning with 1947. Value added by manufacture for 1939, prior to revision and on a basis comparable with 1937 and previous year, was $24.7 billion.

[9]The 1939 figures for all employees were revised on the basis of estimates rather than by retabulation of the 1939 reports. The estimates were made in the following manner: For the number of employees, by multiplying the retabulated figure for number of production workers by the ratio of all employees to production workers computed from the unrevised 1939 statistics; for salaries and wages, by multiplying the retabulated wage figure by the ratio for salaries and wages also derived from the unrevised 1939 statistics.

[10]Not including data for salaried officers of corporations and their salaries and, therefore, not strictly comparable with figures for other years.

[11]These figures for 1899 and earlier years represent hand and neighborhood manufacturing operations.

Table 2. **Operating Ratios for All Manufacturing Establishments Including Administrative Offices and Auxiliaries: 1977 and Earlier Years**

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

Note: 1977 and 1972 payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. (X) Not applicable.

[1]The total value of shipments for industry groups (2- and 3-digit) and a few individual industries (4-digit) includes extensive duplication arising from shipments between establishments in the same industry classification.

[2]Establishments in this industry reported value of production instead of value of shipments. Consequently, the formula for computing value added by manufacture was modified to exclude any change in finished product inventories between the beginning and end of the year.

[3]Value added data include government-owned, contractor-operated plants which were estimated based upon averages reported for commercial establishments in prior years. Cost of materials data exclude government-owned materials furnished to government-owned, contractor-operated plants and include fuel and electricity purchased by or for the establishments. Value of shipments data include a calculated value of shipments for government-owned, contractor-operated plants comprised of adjusted value added plus the cost of fuels and electric energy. New capital expenditures include expenditures for plants under construction but not in operation. Capital expenditures of government-owned, contractor-operated plants are excluded from the totals for the industry.

[4]Includes expenditures for plants in operation and for plants under construction but not yet in operation.

[5]Government-owned, privately-operated establishments did not enter into the calculation of "primary product specialization ratio" or "coverage ratio" as all other dollar receipts for these establishments were included in "miscellaneous receipts."

[6]Minumum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[7]The value of shipments and cost of materials for this industry include substantial duplication; therefore, the specialization ratios and coverage ratios were not calculated.

[8]Relationships are not meaningful because of the predominance of receipts for contract and commission work on materials owned by others. Such receipts are treated as primary products for this industry.

[9]Establishments in this industry were requested to report value of work done instead of value of shipments. Consequently, the formula for computing value added by manufacture was not adjusted for any inventory change between the beginning and end of the year.

[10]In 1977 and 1972, in addition to the employment and payroll reported for operating manufacturing establishments, manufacturing concerns reported separately for administrative offices or auxiliary units which serve the manufacturing establishments of a company (e.g., storage warehouses, power plants, research laboratories, garages, repair shops, etc.) rather than the general public. Separate reports were obtained if these units were at different general locations from the establishments served or if they serviced more than one manufacturing establishment. The figures shown for these units do not represent a separate industry but rather a balancing total for all manufacturing industries.

Table 4. Selected Statistics for Major Industry Groups by Employment Size of Establishment: 1977

Item	All establishments (no.)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)	End-of-year inventories (million dollars)
		Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

Note: Data for administrative offices and auxiliary operations are excluded from this table.

(D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1--10 to 19 percent; E2--20 to 29 percent; E3--30 to 39 percent; E4--40 to 49 percent; E5--50 to 59 percent; E5--50 to 59 percent; E6--60 to 69 percent; E7--70 to 79 percent; E8--80 to 89 percent; E9--90 to 99 percent; E0--100 percent.

[2]Data are also included in respective size classes shown.

(Z) Less than 50 employees.

[1]Detailed establishment data exceed totals since some establishments participate in more than one activity.

[2]Total payroll data for each industry group are actual. Detail data are estimates based on reported employment and average annual salaries determined from data collected in the 1977 Enterprise Statistics series.

Table 6. Employment Statistics for Operating Manufacturing Establishments and Administrative Offices and Auxiliaries by Major Industry Group: 1977 and Prior Census Years

1977 code	Major industry group and year	All establishments		Operating manufacturing establishments		Administrative offices and auxiliaries	
		Employees (1,000)	Payroll (million dollars)	Employees (1,000)	Payroll (million dollars)	Employees (1,000)	Payroll (million dollars)

[1]Includes administrative offices and auxiliaries.

[2]Aggregate of cost of materials and value of shipments for industry groups and for all manufacturing industries includes extensive duplication, since products of some industries are used as materials by others.

Table 9. Gross Book Value of Depreciable Assets, Capital Expenditures, Retirements, Depreciation Charges, and Rental Payments for Buildings and Machinery by Major Industry Group: 1977

Note: Expenditures data, shown in table 3a, are census universe figures and may differ from ASM sample estimates shown in this table. Table 3b figures represent best estimate of year-to-year change as measured by continuing ASM sample, but are subject to sampling errors. Hence, as estimates of level, they are not as reliable as universe figures. For a description of the standard error of estimate, see the section "Qualifications of data" in appendix B.

Table 10. **Cost of Purchased Services by Major Industry Group: 1977**

Description of Industries 2

TABLES

INDUSTRY STATISTICS

1a. Historical Statistics: 1977 and Earlier Years 5
1b. Selected Operating Ratios: 1977 and Earlier Years 7
2. Geographic Area: 1977 and 1972 9
3a. Summary Statistics: 1977 17
3b. Supplemental Statistics Based on Sample Estimates: 1977 19
4. Employment Size of Establishment: 1977 20
5a. Industry and Primary Product Class Specialization: 1977 23

PRODUCT STATISTICS

5b. Industry-Product Analysis—Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967 24
5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977 25
6a. Products and Product Classes—Quantity Sold and Value of Receipts of All Producers: 1977 and 1972 27
6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972 34
6c. Product Classes—Value Shipped by All Producers: 1963, 1967, 1972 to 1977 39

MATERIAL STATISTICS

7. Materials Consumed by Kind: 1977 and 1972 40

DESCRIPTION OF INDUSTRIES

NEWSPAPERS, PERIODICALS, BOOKS, AND MISCELLANEOUS PUBLISHING

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code	Title
2711	Newspapers
2721	Periodicals
2731	Book Publishing
2732	Book Printing
2741	Miscellaneous Publishing

The industry statistics (employment, payroll, cost of materials, value of receipts, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing receipts or shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

As in previous censuses, publishing, printing, and allied activities, other than those performed in government-owned and operated establishments, are included as manufacturing activities. Establishments engaged in publishing newspapers, and establishments primarily engaged in publishing periodicals, books, and miscellaneous publications (including those primarily engaged in book printing) are assigned to one of the five separately described industries below. As noted in the Introduction, this report does not incorporate any data reported by religious, social, charitable, educational, and other nonprofit organizations whose employees are not covered under the Social Security System. News syndicates are classified in service industries and their activities are included in the census of business.

The term "publisher" is used to designate the person or organization by whom or in whose name newspapers, periodicals, and other publications are listed. In order to provide the fullest possible coverage of the publishing field in the census of manufactures, a separate report was requested from each publishing establishment, whether or not any printing was done at the publishing location. All establishments engaged in the publishing of one newspaper or more are classified as newspaper publishers, without regard to the ratio of receipts from other activities (e.g., job printing) to their total receipts.

Publishers of newspapers and periodicals were asked to report separately for each of their publications, where possible, information on circulation and dollar receipts by frequency of issue as well as by type of revenue. The more common frequencies of issue were listed on the report forms supplied to all newspapers, and a special inquiry was addressed to publishers of periodicals to provide uniform designation of periodicals by type of issue. Newspaper and periodical publishers were required to break their total revenues into two parts—receipts from subscriptions and sales, and receipts from advertising. "Total revenue" was defined as net after deducting advertising agency commissions, cash discounts, newstand, carrier, and wholesalers' commissions, and other similar items.

As in 1972, the data on number of employees for newspaper and periodical publishing do not include newsboys or carrier boys. Again, periodical and book publishers have been subdivided to group separately those who publish only from those who print as well as publish. Newspapers are also subdivided into daily and weekly and other papers. The industry statistics shown in tables 2, 3, and 4 provide this subindustry treatment for industries 2711, 2721, 2731, and 2741.

INDUSTRY 2711, NEWSPAPERS

This industry comprises establishments primarily engaged in publishing newspapers, or in publishing and printing newspapers. These establishments carry on the various operations necessary for issuing newspapers, including the gathering of news and the preparation of editorials and advertisements, but may or may not perform their own printing. Commercial printing is frequently carried on by establishments engaged in publishing and printing newspapers, but, even though the commercial printing may be of major importance, such establishments are included in this industry. For the purposes of the census of manufactures, the term "newspaper" includes those publications issued at regular frequencies which contain news of interest to the general public whether or not they are published in the English language. Establishments not engaged in publishing newspapers, but which print or lithograph newspapers for publishers, are classified in industry group 275. News syndicates are classified in service industry 7351.

Publications have been classified as periodicals (industry 2721) rather than as newspapers if their news and editorial

presentations do not appear to be directed to the public at large. Among the types of publications sometimes considered newspapers, but treated in the census as periodicals, are the following: Trade journals, house organs, local church or school papers, and like publications with very limited or specialized news treatment. Generally, publications issued by nonprofit organizations (educational, religious, charitable, labor, business, professional, etc.) are classified as periodicals, as are magazine and comic supplements for Sunday newspapers.

The total value of receipts for establishments classified in the Newspapers industry amounted to $13,056 million in 1977, an increase of 58 percent from 1972. The value of receipts of products classified as primary to the industry was $12,468 million, an increase of 58 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were daily and Sunday newspapers, for which receipts increased 54 percent, and weekly and other newspapers, for which receipts increased 98 percent. Value added by manufacture, at $9,519 million in 1977, was 53 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 349.9 thousand employees. The leading States in employment were California, New York, Pennsylvania, and Illinois accounting for approximately 30 percent of the industry's 1977 employment. Data for Pennsylvania have been withheld to avoid disclosing operations of individual companies. However, establishments counts and employment size ranges are provided. These same States were in the forefront for 1972 when they accounted for 29 percent of the industry's employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 5 percent of total value of shipments.

INDUSTRY 2721, PERIODICALS

This industry comprises establishments primarily engaged in publishing periodicals, or in preparing, publishing, and printing periodicals. These establishments carry on the various operations necessary for issuing periodicals, but may or may not perform their own printing. Establishments not engaged in publishing periodicals, but which print or lithograph periodicals for publishers are classified in industry group 275.

Data on the periodical publishing activities of nonprofit organizations (religious, educational, social, charitable, etc.) have been included to the extent that the employees of such organizations are covered under the Social Security System. For the distinction between newspapers and periodicals which has been applied in classifying establishments for the census of manufactures, see the foregoing statements under industry 2711.

The total value of receipts for establishments classifed in the Periodicals industry amounted to $6,057 million in 1977, an increase of 72 percent from 1972. The value of receipts of products classified as primary to the industry was $5,529 million, an increase of 73 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were general periodicals, for which receipts increased 89 percent, and business and professional periodicals, for which receipts increased 43 percent. Value added by manufacture, at $3,763 million in 1977, was 78 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 69.9 thousand employees, an increase of 5 percent from 1972. The leading States in employment were New York, Illinois, California, and Pennsylvania, accounting for 63 percent of the industry's 1977 employment. This represents a shift from 1972 when New York, Illinois, California, and the District of Columbia accounted for 60 percent of the industry's employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 7 percent of total value of shipments.

INDUSTRY 2731, BOOK PUBLISHING

This industry comprises establishments primarily engaged in publishing only or in publishing and printing books and pamphlets. Establishments primarily engaged in printing or in printing and binding (but not publishing) books and pamphlets are classified in industry 2732. Establishments primarily engaged in book binding are classified in industry 2789.

Industry 2731 also includes data on book publishing activities obtained from nonprofit organizations whose employees are covered under the Social Security System and were able to report their book publishing operations as a separate establishment.

The data presented in table 6a for number of books sold represent the total number of books sold (shipped and billed) by publishers during 1977, without regard to whether these books were actually published or printed in 1977. The value figures shown in this table and in tables 6b and 6c are net publishers' receipts after deducting cash discounts, returns, and allowances; i.e., they represent net sales.

"Books" are considered to include all collections of 49 or more pages, exclusive of the cover, bound by any method, and all hardboard collections, irrespective of the number of pages. (The designation "hardbound" describes books which are bound with paper over board, cloth over board, and artificial or genuine leather.) "Pamphlets" are defined to mean any collection to be offered for sale of at least 5 but less than 49 paperbound pages.

The total value of receipts for establishments classified in the Book Publishing industry amounted to $4,794 million in 1977, an increase of 68 percent from 1972. The value of receipts of products classified as primary to the industry was $5,008 million, an increase of 72 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were general books, for which receipts increased 88 percent, and textbooks, for which receipts increased 74 percent. Value added by manufacture, at $3,262 million in 1977, was 69 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 59.5 thousand employees, an increase of 4 percent from 1972. The leading States in employment were New York, Illinois, California, and Massachusetts, accounting for 61 percent of the industry's 1977 employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 5 percent of total value of shipments.

INDUSTRY 2732, BOOK PRINTING

This industry comprises establishments primarily engaged in printing only or in printing and binding books, and pamphlets, but not engaged in publishing. Establishments primarily engaged in publishing or in publishing and printing books and pamphlets are classified in industry 2731. Establishments engaged in both printing and binding books, but primarily binding books printed elsewhere are classified in industry 2789.

Establishments classified in industry 2732 are similar in character to some establishments primarily engaged in commercial printing (industries 2751, 2752, and 2754). The distinction is that all the establishments classified in industry 2732 derive the greater part of their revenue from printing books and pamphlets, while such operations are secondary activities for establishments classified in industries 2751, 2752, and 2754.

The total value of receipts for establishments classified in the Book Printing industry amounted to $1,692 million in 1977, an increase of 80 percent from 1972. The value of receipts of products classified as primary to the industry was $1,831 million, an increase of 74 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were books, printed and bound, lithographic process, from which receipts increased 100 percent, and books, printed only, lithographic process, for which receipts increased 59 percent. Value added by manufacture, at $1,029 million in 1977, was 70 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 46.9 thousand employees, an increase of 15 percent from 1972. The leading States in employment were New York, Tennessee, Indiana, and Pennsylvania, accounting for 35 percent of the industry's 1977 employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 6 percent of total value of shipments.

INDUSTRY 2741, MISCELLANEOUS PUBLISHING

This industry comprises establishments primarily engaged in miscellaneous publishing activities, not elsewhere classified, whether or not engaged in printing. Establishments primarily engaged in offering financial, credit, or other business services, and which may publish directories as part of this service, are not included in this industry, but are classified in service industries.

The total value of receipts for establishments classified in the Miscellaneous Publishing industry amounted to $1,851 million in 1977, an increase of 73 percent from 1972. The value of receipts of products classified as primary to the industry was $1,935 million, an increase of 83 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were telephone directories, for which receipts increased 96 percent, and business service publications, for which receipts increased 72 percent. Value added by manufacture, at $1,291 million in 1977, was 66 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 42.1 thousand employees, an increase of 9 percent from 1972. The leading States in employment were New York, Illinois, New Jersey, and California, accounting for 53 percent of the industry's 1977 employment. These same States were in the forefront for 1972 when they accounted for approximately 55 percent of the industry's employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 10 percent of total value of shipments.

Table 1a. Historical Statistics for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year[1]	Companies[2] (no.)	All establishments: Total (no.)	All establishments: With 20 employees or more (no.) - Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. r Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4]Data for 1967 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5]Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus these estimates may be of limited reliability.

[6]Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[9]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[10]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Used capital expenditures	do	7.0	6.0	1.0	7.5	1.9	1.0	0.9

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977

Buildings and other structures	69.5	5	14.4	6	8.6	6	6.2	14	5.6	7
Machinery and equipment	279.3	3	36.3	8	44.0	1	42.9	4	20.6	8

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

– Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977—Con.

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. Industry-Product Analysis—Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

Table 5c. Industry-Product Analysis — Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

27410 00	Miscellaneous publishing, n.s.k., typically for companies with 5 employees or more (see note)	.....	(NA)	(X)	247.7	(X)	95.7
27410 02	Miscellaneous publishing, n.s.k., typically for companies with less than 5 employees (see note)	.....	(NA)	(X)	86.8	(X)	75.5

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00" or, in some cases, to appropriate product group code (4 digits) followed by "0 00."

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.

[1]Quantity and value reported by all producers of product, not just those with receipts of $100,000 or more.

[2]For some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figures * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[3]Includes paid, free, bulk, etc. "Issue" means the sum of all editions published on a given day in the case of establishments publishing newspapers on a combined frequency-of-issue basis (morning and Sunday, evening and Sunday, etc.). Separate average circulation figures were computed for morning editions, evening editions, and Sunday editions.

[4]Circulation data for weekly and other newspapers not shown because information was not reported by many small newspapers.

[5]For 1977, the term "mass market paperbound books" was introduced, replacing the 1972 term "wholesale paperbound books." The old term appears to have caused a misclassification of books between adult trade paperbound books and wholesale paperbound books in 1972.

[6]For 1972, data for mass merchandised juvenile books were collected separately but included with data for "general books (trade, etc.), n.s.k.," to avoid disclosing operations of individual companies. For 1977, data for mass merchandised juvenile books were included with "juvenile books, fiction and nonfiction, excluding toy and coloring books."

[7]For 1972, data for university press books were not collected separately but were included with data for "other books, n.e.c."

[8]Value reported by all producers of product, not just those with receipts of $100,000 or more.

9For 1977, product code 27328 16 was combined with product code 27328 24.

[10]For 1977, product code 27328 31 was combined with product code 27328 21.

[11]For 1972, for receipts detail, see 1972 Census of Manufactures Volume II, Industry Statistics, Part 2, table 6A, pp. 27A-32 and 33. 1977 format revision precluded showing 1972 data here.

[12]For 1977, product code 27413 95 was included with product code 27413 98.

Table 6b. Product Classes — Value of Shipments by All Producers by Geographic Area: 1977 and 1972

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

Table 6b. **Product Classes — Value of Shipments by All Producers by Geographic Area: 1977 and 1972** — Con.

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards.

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

[2]Individual product codes included in product class for years prior to 1972 differ from product codes for 1972. Products shifting into or out of product class represent approximately 14 percent of total 1972 receipts.

[3]Withheld because estimated figure is negative. This is consequence of using difference method of estimation (see estimating procedures in appendix B) and of improved establishment reporting that resulted in changing classification of shipments from n.s.k. code for 1972 Census to specified 5-digit product classes for this year. Four-digit total is best estimate, even though smaller than sum of 5-digit values.

Table 7. Materials Consumed by Kind: 1977 and 1972

(Includes quantity and cost of materials consumed or put into production by establishments classified only in this industry. For further explanation, see appendix A, Cost of materials)

n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable.

[1]For some establishments, data have been estimated from central unit values, which are based on quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[2]1972 data may not be directly comparable to 1977 data because of revision in description. For 1972, material code 386151 read "unexposed lithographic plates and metal for lithographic plates."

[3]For 1972, material code 279512 was included with material code 970099.

[4]Total cost of materials of establishments that did not report detailed materials data, including establishments that were not mailed a form.

[5]For 1972, material codes 220011, 289101, 279512, 386181, and 349704 were included with material code 970099.

[6]10 to 30 percent of quantity was estimated.

[7]For 1977, material code 289311 was included with material code 289305.

DESCRIPTION OF INDUSTRIES

COMMERCIAL PRINTING AND MANIFOLD BUSINESS FORMS

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code	Title
2751	Commercial Printing, Letterpress
2752	Commercial Printing, Lithographic
2753	Engraving and Plate Printing
2754	Commercial Printing, Gravure
2761	Manifold Business Forms

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

INDUSTRY 2751, COMMERCIAL PRINTING, LETTERPRESS

This industry comprises establishments primarily engaged in letterpress, and screen commerical or job printing, including flexographic. This industry includes general printing shops, as well as shops specializing in printing newspapers and periodicals for others, and those which specialize in screen printing. Establishments primarily engaged in printing books, without publishing, are classified in industry 2732, and greeting cards in industry 2771. Establishments primarily engaged in printing from lithographic plates are classified in industry 2752, and gravure and rotogravure printing in industry 2754.

The total value of receipts for establishments classified in the Commerical Printing, Letterpress industry amounted to $4,284 million in 1977, an increase of 30 percent from 1972. The value of receipts for products classified as primary to the industry was $4,621 million, an increase of 37 percent from 1972. (See the Introduction for a discussion of the difference between value of receipts for the industry and value of product receipts.) The products accounting for a significant portion of this change were other general job printing, for which receipts increased 58 percent, and labels and printed rolls and sheets for packaging purposes, for which receipts increased 49 percent. Value added by manufacture, at $2,440 million in 1977, was 21 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 110.9 thousand employees, a decrease of 15 percent from 1972. The leading States in employment were Illinois, New York, California, and Ohio, accounting for 44 percent of the industry's 1977 employment. These same States were in the forefront for 1972 when they accounted for 44 percent of the industry's employment, although there has been some shift in the relative importance of individual States. This represents a shift from 1972 when New York was first and Illinois second.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 25 percent of total value of receipts.

INDUSTRY 2752, COMMERCIAL PRINTING, LITHOGRAPHIC

This industry comprises establishments primarily engaged in printing by the lithographic process. The greater part of the work in this industry is performed on a job or custom basis, but in some cases lithographed calendars, maps, posters, decalcomanias, etc., are made for sale. Offset printing, photo-offset printing, and photo lithographing are also included in this industry. Establishments primarily engaged in lithographing books and pamphlets, without publishing, are classified in industry 2732; and greeting cards in industry 2771. Establishments primarily engaged in preparing lithographic plates and in related services are classified in industry 2795.

The total value of receipts for establishments classified in the Commercial Printing, Lithographic industry amounted to $9,360 million in 1977, an increase of 83 percent from 1972.

The value of receipts for products classified as primary to the industry was $8,980 million, an increase of 83 percent from 1972. (See the Introduction for a discussion of the difference between value of receipts for the industry and value of product receipts.) The products accounting for a significant portion of this change were advertising printing, for which receipts increased 55 percent, and general job printing, for which receipts increased 125 percent. Value added by manufacture, at $5,338 million in 1977, was 69 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 216.3 thousand employees, an increase of 18 percent from 1972. The leading States in employment were New York, Illinois, California, and Pennsylvania, accounting for 37 percent of the industry's 1977 employment. These same States were in the forefront for 1972 when they accounted for 40 percent of the industry's employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 10 percent of total value of receipts.

INDUSTRY 2753, ENGRAVING AND PLATE PRINTING

This industry comprises establishments primarily engaged in engraving and etching steel, copper, wood, or rubber plates; in using plates to print stationery, visiting and other cards, invitations, maps, etc.; and in making woodcuts for use in printing illustrations, posters, etc. Establishments primarily engaged in engraving for purposes other than printing are classified in industry 3479.

The total value of receipts for establishments classified in the Engraving and Plate Printing industry amounted to $315 million in 1977, an increase of 56 percent from 1972. The value of receipts for products classified as primary to the industry was $289 million, an increase of 40 percent from 1972. (See the Introduction for a discussion of the difference between value of receipts for the industry and value of product receipts.) The change reflected a general trend in the receipts for most of the products of the industry. Value added by manufacture, at $231 million in 1977, was 51 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 9.8 thousand employees, an increase of 2 percent from 1972. The leading States in employment were New York, Pennsylvania, California, and Illinois, accounting for 54 percent of the industry's 1977 employment. This represents a shift from 1972 when New York, Illinois, Massachusetts, and New Jersey accounted for 40 percent of the industry's employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 11 percent of total value of receipts.

INDUSTRY 2754, COMMERCIAL PRINTING, GRAVURE

This industry comprises establishments primarily engaged in gravure printing. This industry also includes establishments primarily engaged in preparing gravure plates and cylinders.

The total value of receipts for establishments classified in the Commercial Printing, Gravure industry amounted to $1,057 million in 1977, an increase of 51 percent from 1972. The value of receipts for products classified as primary to the industry was $1,147 million, an increase of 51 percent from 1972. (See the Introduction for a discussion of the difference between value of receipts for the industry and value of product receipts.) The products accounting for a significant portion of this change were catalogs, for which receipts increased 57 percent, and magazines and periodicals, for which receipts increased 33 percent. Value added by manufacture, at $541 million in 1977, was 45 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 19.0 thousand employees, a decrease of 5 percent from 1972. The leading States in employment were Illinois, Pennsylvania, California, and Indiana accounting for approximately 45 percent of the industry's 1977 employment. Data for Indiana have been withheld to avoid disclosing operatios of individual companies. However, establishment counts and employment size ranges are provided.

Establishments of single-unit companies in this industry with up to 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time of the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 3 percent of total value of receipts.

INDUSTRY 2761, MANIFOLD BUSINESS FORMS

This industry comprises establishments primarily engaged in designing and printing, by any process, special forms for use in the operation of a business, in single and multiple sets, including carbonized or interleaved with carbon or otherwise processed for multiple reproduction.

The total value of shipments for establishments classified in the Manifold Business Forms industry amounted to $2,894 million in 1977, an increase of 102 percent from 1972. The value of shipments of products classified as primary to the industry was $2,703 million, an increase of 96 percent from

1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were custom continuous forms, for which shipments increased 62 percent, and unit set forms, for which shipments increased 72 percent. Value added by manufacture, at $1,492 million in 1977, was 81 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 45.3 thousand employees, an increase of 17 percent from 1972. The leading States in employment were California, Texas, Ohio, and Illinois, accounting for 36 percent of the industry's 1977 employment. These same States were in the forefront for 1972 when they accounted for 36 percent of the industry's employment, although there has been some shift in the relative importance of individual States.

Establishments of single-unit companies in this industry with up to 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 5 percent of total value of shipments.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. r Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4]Data for 1967 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5]Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus these estimates may be of limited reliability.

[6]Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[9]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[10]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. Summary Statistics for the Industry: 1977

[For explanation of terms, see appendix A]

Item	Unit of measure	Commercial printing, letterpress (SIC 2751)	Commercial printing, lithographic (SIC 2752)	Engraving and plate printing (SIC 2753)	Commercial printing, gravure (SIC 2754)	Manifold business forms (SIC 2761)

New machinery and equipment	do	131.0	303.3	14.3	76.0	69.6
Used capital expenditures	do	9.8	42.5	0.5	2.8	8.9

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977

(For explanation of terms, see appendix A. For description of annual survey of manufactures (ASM), see appendix B)

Item	Commercial printing, letterpress (SIC 2751)		Commercial printing, lithographic (SIC 2752)		Engraving and plate printing (SIC 2753)		Commercial printing, gravure (SIC 2754)		Manifold business forms (SIC 2761)

Retirements	47.2	14	137.2	8	(2.7)	18	14.0	6	38.5	13
End of year	1,149.6	1	2,773.4	1	83.2	10	453.6	2	737.3	3
Total gross value of depreciable assets:										
Beginning of year	1,309.1	2	3,116.9	1	89.7	12	508.4	3	842.1	3
New capital expenditures	198.4	8	376.4	6	18.7	9	95.0	2	90.8	8
Used capital expenditures	(16.5)	22	(61.6)	21	(0.5)	29	(2.2)	22	(16.9)	54
Retirements	58.1	14	148.7	9	(3.1)	19	15.8	6	41.3	12
End of year	1,465.9	2	3,406.1	1	105.8	10	589.7	2	908.4	3
Depreciation charges during 1977	106.4	3	270.2	5	6.5	9	34.4	3	57.7	3
Buildings and other structures	15.2	8	35.2	10	(0.9)	28	4.5	4	6.5	7
Machinery and equipment	91.2	4	235.0	5	5.7	8	29.9	3	51.2	4

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

[For explanation of terms, see appendix A]

Industry and employment size class	E[1]	All establishments (no.)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)	End-of-year inventories (million dollars)

– Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)

See footnotes at end of table.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977—Con.

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. Industry-Product Analysis—Value of Receipts for an Industry and Primary Product Receipts, and Specialization and Coverage Ratios: 1977, 1972, and 1967

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

Table 5c. Industry-Product Analysis — Receipts by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

27617 71	One part	23	36.1	4.8
	Multiple parts:			
27617 73	One-time carbon	32	41.8	20.5
27617 75	Carbonless	17	11.1	4.5
27617 79	All other stock forms, including stock tabulating cards, fanfold, and autographic register	13	8.7	2.8
27617 00	Stock continuous forms, n.s.k.	(NA)	6.8	3.3
27610 00	Manifold business forms, n.s.k., typically for establishments with 10 employees or more (see note)	(NA)	116.6	47.6
27610 02	Manifold business forms, n.s.k., typically for establishments with less than 10 employees (see note)	(NA)	53.1	10.1

Footnotes are on next page.

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00" or, in some cases, to appropriate product group code (4 digits) followed by "0 00."

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. [r] Revised.

[1] Value reported by all producers of product, not just those with receipts of $100,000 or more.

[2] For 1972, product class 27541 included directories (now part of product class 27543). 1972 27541 n.s.k. includes 27543 n.s.k.

[3] For 1977 and 1972, product class 27544 was included with product code 27546 98.

[4] For 1972, product codes 27546 13, 27546 51, 27546 71, 27546 83, and 27546 91 were included with product code 27546 98.

[5] For 1972, this industry was new and administrative records were not separately identified. Data for these small establishments remained classified under Industry 2751, Commercial Printing, Letterpress.

[6] Value reported by all producers of product, not just those with shipments of $100,000 or more.

[7] For 1972, product code 27613 11 was included with product codes 27613 22 and 27613 42.

[8] For 1972, product code 27615 55 was included with product codes 27615 58, 27615 62, and 27615 64.

Table 6b. Product Classes — Value of Receipts by All Producers by Geographic Area: 1977 and 1972

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

(NA) Not available. n.s.k. Not specified by kind. rRevised. (S) Withheld because estimate did not meet publication standards.

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

[2]Product class 27544 included with product class 27546.

[3]Withheld because estimated figure is negative. This is consequence of using difference method of estimation (see Estimating Procedures in appendix B) and of improved establishment reporting that resulted in changing classification of shipments from n.s.k. code for 1972 Census to specified 5-digit product classes for this year. Four-digit total is best estimate, even though smaller than sum of 5-digit values.

Table 7. Materials Consumed by Kind: 1977 and 1972

(Includes quantity and cost of materials consumed or put into production by establishments classified only in this industry. For further explanation, see appendix A, Cost of materials)

1977 material code	Material	Unit of measure	1977 Quantity[1]	1977 Delivered cost (million dollars)	1972 Quantity	1972 Delivered cost (million dollars)

- Represents zero. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards.
(X) Not applicable. (Z) Less than 50 thousand dollars or less than half the unit of measure specified.

[1]For some establishments, data have been estimated from central unit values, which are based on quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[2]For 1972, material codes 220011, 289101, 279512, and 349704 were included with material code 970099.

[3]Total cost of materials of establishments that did not report detailed materials data, including establishments that were not mailed a form.

[4]For 1972, material codes 220011, 289101, 279512, 264140, and 349704 were included with material code 970099.

[5]For 1972, material codes 289101, 386155, 386166, and 386181 were included with material code 970099.

[6]For 1977, material codes 263105, 220011, and 279512 were included with material code 970099.

[7]For 1972, material codes 220011, 289101, 279512, and 264140 were included with material code 970099.

[8]For 1972, pressure sensitive base stock accounted for $1.9 million.

7. Materials Consumed by Kind: 1977 and 1972. 28

DESCRIPTION OF INDUSTRIES

GREETING CARDS; BOOKBINDING; PRINTING TRADE SERVICES

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code	Title
2771	Greeting Card Publishing
2782	Blankbooks and Looseleaf Binders
2789	Bookbinding and Related Work
2791	Typesetting
2793	Photoengraving
2794	Electrotyping and Stereotyping
2795	Lithographic Platemaking Services

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

INDUSTRY 2771, GREETING CARD PUBLISHING

This industry comprises establishments primarily engaged in the designing, publishing, and printing, by any process, of greeting cards for all occasions.

The total value of shipments for establishments classified in the Greeting Card Publishing industry amounted to $1,072 million in 1977, an increase of 38 percent from 1972. The value of shipments of products classified as primary to the industry was $765 million, an increase of 31 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were other greeting cards (everyday), for which shipments increased 20 percent, and Christmas cards for which shipments increased 38 percent. Value added by manufacture, at $656 million in 1977, was 24 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 18.1 thousand employees, a decrease of 23 percent from 1972. The leading States in employment were Missouri, Ohio, Arkansas, and Massachusetts, accounting for approximately 55 percent of the industries 1977 employment. Data for Missouri, Ohio, and Arkansas have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 2 percent of total value of shipments.

INDUSTRY 2782, BLANKBOOKS AND LOOSELEAF BINDERS

This industry comprises establishments primarily engaged in the manufacture of blankbooks, looseleaf devices, and library binders; and in ruling paper.

The total value of shipments for establishments classified in the Blankbooks and Looseleaf Binders industry amounted to $1,123 million in 1977, an increase of 90 percent from 1972. The value of shipments of products classified as primary to the industry was $1,040 million, an increase of 82 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were checkbooks, for which shipments increased 102 percent, and looseleaf binders, for which shipments increased 65 percent. Value added by manufacture, at $740 million in 1977, was 91 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 31.8 thousand employees, an increase of 14 percent from 1972. The leading States in employment were Illinois, New York, New Jersey, and Massachusetts, accounting for approximately 41 percent of the

industry's 1977 employment. These same States were in the forefront for 1972 when they accounted for approximately 49 percent of the industry's employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 3 percent of total value of shipments.

INDUSTRY 2789, BOOKBINDING AND RELATED WORK

This industry comprises establishments primarily engaged in edition, trade, job, and library bookbinding; in book or paper bronzing, gilding, and edging, in map and sample mounting; and other services related to bookbinding. Establishments primarily engaged in binding books printed elsewhere are classified in this industry, but those primarily binding books printed in the same establishment are classified in Industry group 273.

The total value of receipts for establishments classified in the Bookbinding and Related Work industry amounted to $534 million in 1977, an increase of 41 percent from 1972. The value of receipts of products classified as primary to the industry was $508 million, an increase of 38 percent from 1972. (See the Introduction for a discussion of the difference between value of receipts for the industry and value of product receipts.) The change reflected a general trend in the receipts of most of the products of the industry. Value added by manufacture, at $409 million in 1977, was 38 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 24.1 thousand employees, a decrease of 4 percent from 1972. The leading States in employment were New York, Illinois, New Jersey, and Pennsylvania, accounting for approximately 51 percent of the industry's 1977 employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 10 percent of total value of receipts.

INDUSTRY 2791, TYPESETTING

This industry comprises establishments primarily engaged in typesetting for the trade, including advertisement typesetting.

The total value of receipts for establishments classified in the Typesetting industry amounted to $731 million in 1977, an increase of 51 percent from 1972. The value of receipts of products classified as primary to the industry was $782 million, an increase of 54 percent from 1972. (See the Introduction for a discussion of the difference between value of receipts for the industry and value of product receipts.) The product accounting for a significant portion of this change was computer-controlled photographic typesetting, for which receipts increased 178 percent. Value added by manufacture, at $623 million in 1977, was 46 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 27.2 thousand employees, an increase of 5 percent from 1972. The leading States in employment were New York, Pennsylvania, Illinois, and California, accounting for approximately 48 percent of the industry's 1977 employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 19 percent of total value of receipts.

INDUSTRY 2793, PHOTOENGRAVING

This industry comprises establishments primarily engaged in preparing photoengraved plates (halftones and linecuts). These establishments do not, as a rule, print from the plates which they make, but prepare them for use by others.

The total value of receipts for establishments classified in the Photoengraving industry amounted to $218 million in 1977, a decrease of 5 percent from 1972. The value of receipts of products classified as primary to the industry was $224 million, an increase of 1 percent from 1972. The change reflected a general trend in the receipts of most of the products of the industry. (See the Introduction for a discussion of the difference between value of receipts for the industry and value of product receipts.) Value added by manufacture, at $168 million in 1977, was 12 percent below value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 5.7 thousand employees, a decrease of 42 percent from 1972. The leading States in employment were New York, California, Illinois, and New Jersey, accounting for approximately 60 percent of the industries 1977 employment. Data for New Jersey have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 8 percent of total value of receipts.

INDUSTRY 2794, ELECTROTYPING AND STEREOTYPING

This industry comprises establishments primarily engaged in preparing electrotype and stereotype plates. These establishments do not, as a rule, print from the plates which they make, but prepare them for use by others.

The total value of receipts for establishments classified in the Electrotyping and Stereotyping industry amounted to $14 million in 1977, a decrease of 63 percent from 1972. The value of receipts of products classified as primary to the industry was $16 million, a decrease of 56 percent from 1972. (See the Introduction for a discussion of the difference between value of receipts for the industry and value of product receipts.) The change reflected a general trend in the receipts of most of the products of the industry. Value added by manufacture, at $10 million in 1977, was 65 percent below value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had .4 thousand employees, a decrease of 76 percent from 1972.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 10 percent of total value of receipts.

INDUSTRY 2795, LITHOGRAPHIC PLATEMAKING SERVICES

This industry comprises establishments primarily engaged in making plates and positives or negatives from which lithographic plates are made, and in related services. Establishments primarily engaged in printing by the lithographic process are classified in industry 2752.

The total value of receipts for establishments classified in the Lithographic Platemaking Services industry amounted to $667 million in 1977, an increase of 160 percent from 1972. The value of receipts of products classified as primary to the industry was $631 million, an increase of 140 percent from 1972. (See the Introduction for a discussion of the difference between value of receipts for the industry and value of product receipts.) The products accounting for a significant portion of this change were lithographic platemaking services, for which receipts increased 206 percent, and lithographic plates, for which receipts increased 63 percent. Value added by manufacture, at $467 million in 1977, was 152 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 15.2 thousand employees, an increase of 71 percent from 1972. The leading States in employment were Illinois, New York, New Jersey, and California, accounting for approximately 50 percent of the industry's 1977 employment. Data for Illinois and New York have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 5 percent of total value of receipts.

Table 1a. Historical Statistics for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year[1]	Companies[2] (no.)	All establishments: Total (no.)	All establishments: With 20 employees or more (no.)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Expenditures and assets: New capital expenditures (million dollars)	Expenditures and assets: Gross value of fixed assets (million dollars)	End-of-year inventories (million dollars)	Ratios: Specialization (percent)	Ratios: Coverage (percent)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. r Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4]Data for 1967 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5]Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus these estimates may be of limited reliability.

[6]Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[9]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[10]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

– Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. **Summary Statistics for the Industry: 1977**

[For explanation of terms, see appendix A]

Item	Unit of measure	Greeting card publishing (SIC 2771)	Blankbooks and looseleaf binders (SIC 2782)	Bookbinding and related work (SIC 2789)	Typesetting (SIC 2791)	Photoengraving (SIC 2793)	Electrotyping and stereotyping (SIC 2794)	Plate making services (SIC 2795)
Primary product specialization ratio[1]	percent	78	86	96	97	83	79	87
Coverage ratio[2]	do	95	91	94	89	79	66	89

New capital expenditures	do	18.8	36.0	19.3	36.7	7.5	0.1	27.4
New buildings and other structures	do	5.8	9.0	2.2	5.9	1.2	(Z)	3.5
New machinery and equipment	do	13.0	27.1	17.1	30.8	6.3	0.1	23.9
Used capital expenditures	do	1.7	4.3	2.2	1.8	1.0	(Z)	2.7

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977

Machinery and equipment	4.9	11	(0.2)	36	(20.0)	15

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimate shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

This page is intentionally blank.

Covered by administrative records[2]	E0	137	0.4	7.7	0.3	0.6	5.4	13.5	5.9	19.4	1.5	1.7

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. Industry-Product Analysis—Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

Table 5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

See footnotes at end of table.

Table 6a. **Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972** – Con.

(Includes value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation, see appendix A, Value of shipments)

1977 product code	Product	1977		1972, value of receipts (million dollars)
		Number of companies with shipments of $100,000 or more	Value of receipts[5] (million dollars)	
	ELECTROTYPING AND STEREOTYPING			
2794- --	Total	(NA)	15.6	35.5
27940 --	Electrotyping and stereotyping duplicate plates made for others:			
27940 11	Electrotypes	10	7.1	17.5
27940 31	Stereotyping	-	.7	1.9
27940 51	Matrices	2		7.6
27940 00	Electrotyping and stereotyping, n.s.k., typically for establishments with 5 employees or more (see note)	(NA)	6.7	6.8
27940 02	Electrotyping and stereotyping, n.s.k., typically for establishments with less than 5 employees (see note)	(NA)	1.1	1.6
	LITHOGRAPHIC PLATEMAKING SERVICES			
2795- --	Total	(NA)	630.7	263.0
27951 --	Lithographic plates	(NA)	183.6	112.3
27951 13	Diazo type plates (prepared for printing)	24	62.5	32.7
27951 15	Wipe on plates	28	32.3	18.4
27951 17	Deep etch plates	26	19.0	r19.8
27951 23	Multimetal plates	18	11.4	11.4
27951 29	All other lithographic plates	44	21.7	30.0
27951 00	Lithographic plates, n.s.k	(NA)	36.7	
27952 --	Lithographic platemaking services	(NA)	403.3	131.6
27952 31	Color corrected process positives or negatives on film	200	221.6	94.4
27952 39	All other film	111	66.5	24.3
27952 41	Assembled flats for platemaking	73	47.2	12.9
27952 00	Lithographic platemaking services, n.s.k	(NA)	68.0	-
27950 00	Lithographic platemaking services, n.s.k., typically for establishments with 5 employees or more (see note)	(NA)	24.4	19.1
27950 02	Lithographic platemaking services, n.s.k., typically for establishments with less than 5 employees (see note)	(NA)	19.4	(6)

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00" or, in some cases, to appropriate product group code (4 digits) followed by "0 00."

- Represents zero. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
(X) Not applicable. (Z) Less than 50 thousand dollars or less than half the unit of measure specified.

[1]Quantity and value reported by all producers of product, not just those with shipments of $100,000 or more.

[2]For some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[3]Quantity reported in 1972 is not comparable with quantity reported in 1977. For 1972, quantity was reported in number of packs (plastic, vinyl, and cello); in 1977, in number of cards.

[4]Value reported by all producers of product, not just those with shipments of $100,000 or more.

[5]Value reported by all producers of product, not just those with receipts of $100,000 or more.

[6]For 1972, administrative records were not separately identified between lithographic platemaking services and lithographic printing (prior to 1972, lithographic platemaking services were a part of Industry 2752, Commercial Printing, Lithographic). 1972 value of receipts for these establishments was included in product code 27520 02.

Table 6b. Product Classes — Value of Shipments by All Producers by Geographic Area: 1977 and 1972

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some states are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

[2]Withheld because estimated figure is negative. This is consequence of using difference method of estimation (see Estimating Procedures in appendix B) and of improved establishment reporting that resulted in changing classification of shipments from n.s.k. code for 1972 Census to specified 5-digit product classes for this year. Four-digit total is best estimate, even though smaller than sum of 5-digit values.

Table 7. Materials Consumed by Kind: 1977 and 1972

(Includes cost of materials consumed or put into production by establishments classified only in this industry. For further explanation, see appendix A, Cost of materials)

1977 material code	Material	1977, delivered cost (million dollars)	1972, delivered cost (million dollars)
	INDUSTRY 2771, GREETING CARD PUBLISHING

TABLES

INDUSTRY STATISTICS

1a. Historical Statistics: 1977 and Earlier Years 5
1b. Selected Operating Ratios: 1977 and Earlier Years 6
1c. Statistics for Privately Owned and Operated Establishments: 1977 and 1972 7
2. Geographic Area: 1977 and 1972 8
3a. Summary Statistics: 1977 10
3b. Supplemental Statistics Based on Sample Estimates: 1977 11
4. Employment Size of Establishment: 1977 12
5a. Industry and Primary Product Class Specialization: 1977 13

PRODUCT STATISTICS

5b. Industry-Product Analysis—Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967 14
5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977 15
6a. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1977 and 1972 17
6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972 . . . 30
6c. Product Classes—Value Shipped by All Producers: 1963, 1967, 1972 to 1977 33

MATERIAL AND SPECIAL STATISTICS

7. Materials Consumed by Kind: 1977 and 1972 34
8. Employees Engaged in Construction: 1977 38

DESCRIPTION OF INDUSTRIES

INDUSTRIAL INORGANIC CHEMICALS

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title	
2812	Alkalies and Chlorine
2813	Industrial Gases
2816	Inorganic Pigments
2819	Industrial Inorganic Chemicals, N.E.C.

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.) This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

INDUSTRY 2812, ALKALIES AND CHLORINE

This industry comprises establishments primarily engaged in the manufacture of alkalies and chlorine.

The total value of shipments for establishments classified in the Alkalies and Chlorine industry amounted to $1,655 million in 1977, an increase of 101 percent from 1972. The value of shipments of products classified as primary to the industry was $1,787 million, an increase of 122 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were chlorine, compressed or liquefied, for which shipments increased 147 percent, and sodium hydroxide (caustic soda), for which shipments increased 143 percent. Value added by manufacture, at $824 million in 1977, was 81 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 11.8 thousand employees, a decrease of 11 percent from 1972. The leading States in employment were Michigan, New York, Texas, and Louisiana, accounting for approximately 60 percent of the industry's 1977 employment. Data for Michigan, Texas, and New York have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

The 1977 census obtained data on shipments of alkalies and chlorine only at product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of alkalies and chlorine are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-28A, Inorganic Chemicals. Some of these data are also shown in table 6a.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 3 percent of total value of shipments.

INDUSTRY 2813, INDUSTRIAL GASES

This industry comprises establishments primarily engaged in the manufacture of gases for sale in compressed, liquid, and solid forms. Establishments primarily engaged in the manufacture of fluorine and sulfur dioxide are classified in industry 2819, household ammonia in industry 2842, other ammonia in industry 2873, and chlorine in industry 2812. Distributors of industrial gases and establishments primarily engaged in shipping liquid oxygen are classified in trade industries.

The total value of shipments for establishments classified in the Industrial Gases industry amounted to $1,235 million in 1977, an increase of 82 percent from 1972. The value of shipments of products classified as primary to the industry was $1,199 million, an increase of 82 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) Value added by manufacture, at $733 million in 1977, was 57 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 7.5 thousand employees, a decrease of 22 percent from 1972. The leading States in employment

were California, Pennsylvania, and Texas, accounting for approximately 40 percent of the industry's 1977 employment. Data for Pennsylvania and Texas have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

The 1977 census obtained data on shipments of industrial gases only at product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of industrial gases are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-28C, Industrial Gases. Some of these data are also shown in table 6a.

Establishments of single-unit companies in this industry with up to 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 6 percent of total value of shipments.

INDUSTRY 2816, INORGANIC PIGMENTS

This industry comprises establishments primarily engaged in the manufacture of inorganic pigments. Important products of this industry include black pigments (except carbon black, channel and furnace processes, which are classified in industry 2895), white pigments, and color pigments. Establishments primarily engaged in the manufacture of organic color pigments, except animal black and bone black, are classified in industry 2865.

The total value of shipments for establishmnts classified in the Inorganic Pigments industry amounted to $1,260 million in 1977, an increase of 58 percent from 1972. The value of shipments of products classified as primary to the industry was $1,280 million, an increase of 69 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were titanium pigments, for which shipments increased 76 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $568 million in 1977, was 48 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 11.9 thousand employees, a decrease of 7 percent from 1972. The leading States in employment were Pennsylvania, Ohio, New Jersey, and Michigan, accounting for approximately 45 percent of the industry's 1977 employment.

The 1977 census obtained data on shipments of titanium dioxide pigments and chrome colors only at product group levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of these products are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-28A, Inorganic Chemicals. Some of these data are also shown in table 6a.

Establishments of single-unit companies in this industry with up to 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 2 percent of total value of shipments.

INDUSTRY 2819, INDUSTRIAL INORGANIC CHEMICALS, N.E.C.

This industry comprises establishments primarily engaged in the manufacture of industrial inorganic chemicals, not elsewhere classified. Important products of this industry include inorganic salts of sodium (excluding refined sodium chloride), potassium, aluminum, calcium, chromium, magnesium, mercury, nickel, silver, tin; inorganic compounds such as alums, calcium carbide, hydrogen peroxide, sodium silicate, ammonia compounds (except fertilizers), rare earth metal salts and elemental bromine, fluorine, iodine, phosphorus, and alkali metals (sodium, potassium, lithium, etc.). Establishments primarily engaged in mining, milling, or otherwise preparing natural potassium, sodium, or boron compounds (other than common salt) are classified in Industry 1474, Potash, Soda, and Borate Minerals. Establishments primarily engaged in the manufacture of household bleaches are classified in Industry 2842, Polishes and Sanitation Goods; phosphoric acid in Industry 2874, Phosphatic Fertilizers; and nitric acid, anhydrous ammonia, and other nitrogenous fertilizer materials in Industry 2873, Nitrogenous Fertilizers.

Beginning with 1954, statistics include information for government-owned, contractor-operated (GOCO) establishments, but exclude the activities of government-owned and/or operated plants. General statistics are shown for all plants (private and government) in table 1A, and for privately owned and operated plants only, in table 1C. Data for all materials consumed except fuels and electric energy, as well as data for fixed assets, capital expenditures and inventories, are excluded for the GOCO plants because these are paid for by current billings to the United States Government. Value of shipments and value added by manufacture have been estimated for the GOCO plants from averages reported for commercial establishments in prior years.

The total value of shipments for establishments classified in the Industrial Inorganic Chemicals, N.E.C. industry amounted to $8,616 million in 1977, an increase of 125 percent from 1972. The value of shipments of products classified as primary to the industry was $6,920 million, an increase of 130 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $4,333 million in 1977, was 113 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 78.2 thousand employees, an increase of 23 percent from 1972. The leading States in employ-

ment were Tennessee, South Carolina, Ohio, and California, accounting for approximately 45 percent of the industry's 1977 employment. Data for South Carolina have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

The 1977 census obtained data on shipments of industrial inorganic chemicals, n.e.c. only at product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of industrial inorganic chemicals, n.e.c. are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-28A, Inorganic Chemicals. Some of these data are also shown in table 6a.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

Table 1a. Historical Statistics for the Industry: 1977 and Earlier Years

(For explanation of terms, see appendix A)

Year[1]	Companies[2] (no.)	All establishments: Total (no.)	All establishments: With 20 employees or more (no.)	All employees: Number (1,000)	All employees: Payroll (mil. dol.) - Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. N.E.C. Not elsewhere classified. [r]Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

(For explanation of terms, see appendix A)

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

(NA) Not available. N.E.C. Not elsewhere classified.

[1]This industry was redefined for 1972 Census of Manufactures, so no data prior to 1972 exist.

[2]Value added for government-owned, contractor-operated plants, included in total, was estimated based upon averages reported for commercial establishments in prior years.

[3]Total data exclude government-owned materials furnished to government-owned, contractor-operated plants, and include fuels and electric energy purchased by or for these plants.

[4]Total data include a calculated value of shipments for government-owned, contractor-operated plants, comprised of adjusted value added (estimated as described in footnote 3) plus cost of fuels and electric energy.

[5]Total excludes expenditures, inventories, and fixed assets of government-owned, contractor-operated plants.

[6]Ratio excludes government-owned, contractor-operated establishments because their dollar receipts were included in miscellaneous receipts. See appendix B for discussion of calculation of specialization and coverage ratios.

[7]Includes both privately owned and operated plants and government-owned, contractor-operated plants.

Table 2. Industry Statistics by Geographic Area: 1977 and 1972

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. Summary Statistics for the Industry: 1977

[For explanation of terms, see appendix A]

Item	Unit of measure	Alkalies and chlorine (SIC 2812)	Industrial gases (SIC 2813)	Inorganic pigments (SIC 2816)	Industrial inorganic chemicals, n.e.c (SIC 2819)
Primary product specialization ratio[1]	percent	83	97	88	87
Coverage ratio[2]	do	58	93	84	77
All establishments	number	49	562	105	564
With 1 to 19 employees	do	16	460	40	276
With 20 to 99 employees	do	11	89	37	174
With 100 employees or more	do	22	13	29	114
All employees, average for year	1,000	11.8	7.5	11.9	78.2
Payroll for year, all employees	mil. dol.	215.9	117.2	179.8	1 326.7
Production workers:					
Average for year	1,000	8.0	4.6	8.0	47.0
March	do	7.7	4.6	7.7	46.7
May	do	7.8	4.6	7.9	47.3
August	do	8.3	4.7	8.2	47.0
November	do	8.0	4.6	7.9	47.1
Hours	millions	16.0	9.6	16.4	96.2
January to March	do	3.9	2.4	4.1	24.0
April to June	do	4.0	2.4	4.2	23.9
July to September	do	4.1	2.4	4.1	24.0
October to December	do	4.1	2.4	4.0	24.4
Wages	mil. dol.	136.2	67.0	110.2	717.9
Cost of materials, etc.	do	825.9	515.9	695.9	4 344.0
Materials, parts, containers, etc., consumed	do	436.1	168.8	561.0	2 988.9
Resales	do	6.4	43.8	21.2	169.6
Fuels consumed	do	143.6	46.2	75.3	324.6
Purchased electric energy	do	183.2	255.8	33.5	814.1
Contract work	do	56.6	1.2	4.9	46.9
Value of shipments, including resales	do	1 655.0	1 234.6	1 259.9	8 615.7
Value of resales	do	9.4	68.3	30.0	200.5
Value added by manufacture	do	823.5	732.8	567.9	4 333.1
Manufacturers' inventories:					
Beginning of year	do	132.4	27.8	240.7	751.3
Finished products	do	56.2	20.7	111.1	241.7
Work in process	do	1.3	1.9	22.5	149.6
Materials, supplies, fuel, etc.	do	74.9	5.2	107.1	360.0
End of year	do	141.8	45.6	251.5	858.4
Finished products	do	50.5	32.5	113.5	280.1
Work in process	do	1.4	4.1	24.1	172.6
Materials, supplies, fuel, etc.	do	89.8	8.9	113.9	405.7
Capital expenditures for plant and equipment	do	186.9	264.1	125.3	472.2
New capital expenditures	do	186.5	243.0	124.3	456.4
New buildings and other structures	do	17.3	23.2	11.7	81.4
New machinery and equipment	do	169.2	219.8	112.5	385.1
Used capital expenditures	do	0.3	21.1	1.0	5.8

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977

(For explanation of terms, see appendix A. For description of annual survey of manufactures (ASM), see appendix B)

Item	Alkalies and chlorine (SIC 2812)		Industrial gases (SIC 2813)		Inorganic pigments (SIC 2816)		Industrial inorganic chemicals, n.e.c. (SIC 2819)	
	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)
Purchased services:								
Cost of purchased services for repair of--								
Buildings and other structures	5.2	1	0.7	7	4.5	3	15.3	4

Retirements	8.5	1	2.7	5	2.8	2	6.7	9
End of year	228.8	2	156.8	3	163.2	2	774.9	1
Machinery and equipment:								
Beginning of year	1,393.5	1	1,316.9	2	697.5	2	3,022.7	1
New capital expenditures	196.0	1	220.7	3	114.5	4	345.4	2
Automobiles, trucks, etc., for highway use[3]	(0.5)	(A)	(1.9)	(A)	(0.8)	(A)	(4.7)	(A)
Computers and peripheral data processing equipment[3]	-	(X)	(3.3)	(A)	(0.4)	(A)	(3.7)	(A)
All other[3]	194.0	12	202.6	9	(100.4	20	325.5	6
New machinery and equipment, n.s.k.[4]	(1.6)	(A)	(13.0)	(A)	(13.0)	(A)	(11.6)	(A)
Used capital expenditures	0.3	1	21.0	10	(1.0)	30	(5.8)	(A)
Retirements	45.7	2	32.8	2	18.2	2	61.0	2
End of year	1,544.3	1	1,525.9	1	794.9	2	3,312.9	1
Total gross value of depreciable assets:								
Beginning of year	1,608.9	1	1,457.1	2	851.0	2	3,731.7	1
New capital expenditures	218.1	2	238.6	3	126.8	5	417.0	2
Used capital expenditures	0.3	1	22.6	9	(1.3)	23	(6.9)	15
Retirements	54.2	2	35.5	2	21.0	2	67.9	2
End of year	1,773.1	1	1,682.8	2	958.1	2	4,087.7	1
Depreciation charges during 1977	72.5	2	95.6	2	56.7	2	318.2	3
Buildings and other structures	6.9	3	6.7	5	7.1	2	34.1	3
Machinery and equipment	65.6	7	88.9	2	49.6	2	284.0	3

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

[For explanation of terms, see appendix A]

Industry and employment size class	E[1]	All establishments (no.) - Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. Industry-Product Analysis — Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

1977 product code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. [1] Government-owned, contractor-operated (GOCO) establishments did not enter into calculation of "primary products specialization ratio" or "coverage ratio" as all dollar receipts for these establishments were included in "miscellaneous receipts."

Table 5c. Industry-Product Analysis — Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

See footnotes at end of table.

Table 5c. **Industry-Product Analysis—Shipments by Product Class and Industry: 1977**—Con.

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

1977 product code	Industry and miscellaneous receipts	Other industries
	Other industries with over $5 million shipments of primary products:	
2812-	2611 Pulp mills	(D)
	2821 Plastics materials and resins	(D)
	2841 Soap and other detergents	(D)
	2865 Cyclic crudes and intermediates	(D)
	2869 Industrial organic chemicals, n.e.c	(D)
2813-	2821 Plastics materials and resins	(D)
	2869 Industrial organic chemicals, n.e.c	(D)
	2873 Nitrogenous fertilizers	(D)
2816-	2865 Cyclic crudes and intermediates	66.6
	2869 Industrial organic chemicals, n.e.c	(D)
	2899 Chemical preparations, n.e.c	(D)
	3333 Primary zinc	(D)
	3341 Secondary nonferrous metals	29.1
2819-	2821 Plastics materials and resins	(D)
	2823 Cellulosic manmade fibers	(D)
	2833 Medicinals and botanicals	(D)
	2841 Soap and other detergents	(D)
	2865 Cyclic crudes and intermediates	(D)
2819-	2869 Industrial organic chemicals, n.e.c	(D)
	2873 Nitrogenous fertilizers	(D)
	2874 Phosphatic fertilizers	(D)
	2879 Agricultural chemicals, n.e.c	(D)
	2891 Adhesives and sealants	(D)
	2899 Chemical preparations, n.e.c	(D)
	2911 Petroleum refining products	(D)
	3079 Miscellaneous plastics products	(D)
	3312 Blast furnace and steel mills	(D)
	3313 Electrometallurgical products	(D)
	3331 Primary copper	50.2
	3333 Primary zinc	(D)
	3334 Primary aluminum	(D)
	3341 Secondary nonferrous metals	(D)
	3399 Primary metal products, n.e.c	(D)
	3443 Fabricated plate work (boiler shops)	(D)
	3861 Photographic equipment and supplies	(D)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

Table 6a. Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972

(Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation, see appendix A, Value of shipments)

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00" or, in some cases, to appropriate product group code (4 digits) followed by "0 00."

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. rRevised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or less than half the unit of measure specified.

[1]Quantity and value reported by all producers of product, not just those with shipments of $100,000 or more.

[2]Includes quantities liquefied for use, storage, or shipments.

[3]Ammonia soda and caustic carbonation processes.

[4]Includes quantities used to manufacture caustic soda, finished sodium bicarbonate, finished light and dense soda ash, calcium carbonate, etc.

[5]Quantity figures reported in terms of soda ash processed to refined bicarbonate.

[6]Includes quantities later evaporated to solid caustic and reported as such.

[7]Includes some liquid shipped as interplant transfers to other establishments for further processing to dry forms.

[8]Includes unspecified amounts produced from liquid caustic received from other establishments.

[9]Includes potassium carbonate, modified sodas, electrolytic soda ash, sodium carbonate (monohydrate), and sal soda; excludes products classified as alkaline detergents.

[10]Excludes quantities converted to finished dense soda ash and finished bicarbonate.

[11]Excludes value for helium produced in government owned plants.

[12]Excludes information for railroad ships, shipyards, welding shops, and small establishments using portable generators.

[13]For 1977, data for acetylene produced for consumption in some plants were combined with data for acetylene produced for pipeline shipment (excluding that shipped to be compressed) to avoid disclosing operations of individual companies.

Footnotes continued on next page.

[14]Excludes production of liquid and gas carbon dioxide converted to and reported as dry ice and also amounts converted from pure carbon dioxide (liquid or solid) purchased or received from other plants. Also, excludes quantity produced and consumed in plants manufacturing soda ash or urea and quantity produced and transferred to other plants for further processing.

[15]Excludes amounts produced and consumed in manufacture of synthetic ammonia or ammonia derivatives.

[16]Data for nitrogen and oxygen are combined with other elemental gases and compressed and liquefied gases.

[17]Excludes amounts vented, used as fuel, etc., and amounts produced and consumed in manufacture of synthetic ammonia and methanol, but includes an unspecified amount produced for sale or interplant transfer to plants consuming this gas in production of ammonia. Also, excludes amounts produced by ammonia dissociation process (cracking of ammonia). Also excludes amounts produced in petroleum refineries for captive use.

[18]For 1977, product code 28137 71 was combined with product code 28137 98 to avoid disclosing operations of individual companies.

[19]Excludes hydrocarbon gases such as propane, butane, and propylene, or halogenated hydrocarbons and cyclopropane, which are reported to U.S. International Trade Commission. Also excludes sulfur dioxide, which is classified as primary to industry 2819, and chlorine, primary to industry 2812.

[20]For 1977, for some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[21]For 1972, product code 28162 25 was included with product code 28162 98.

[22]For 1972, product code 28163 61 was included with product code 28163 98.

[23]For 1977, quantity and value reported by all private producers of product, not just those with shipments of $100,000 or more. Value of shipments from government-owned, contractor-operated plants is included in value of industry shipments as miscellaneous receipts.

[24]Includes value of inorganic chemicals shipped by establishments classified in both "manufacturing" and "nonmanufacturing" industries. Value of shipments reported by "nonmanufacturing" establishments classified in mineral industries and Tennessee Valley Authority for industry 2819 amounted to $377.8 million in 1977 and $175.4 million in 1972.

[25]Source: Current Industrial Reports M28A, Supplement 1, Sulfuric Acid. 1972 data include all revised figures published in CIR.

[26]For 1977, product code 28193 51 was combined with product code 28193 31 to avoid disclosing operations of individual companies.

[27]Represents complete coverage of all manufacturing by inclusion of estimates which account for less than 5 percent of total.

[28]For 1977 includes anhydrous hydrochloric acid shipments of 138,238 short tons valued at $20,557 thousand; for 1972, 217,473 short tons valued at $7,943 thousand.

[29]For 1977 and 1972, product codes 28194 51 and 28194 67 were combined with product code 28194 98.

[30]For 1977 and 1972, product codes 28196 11 and 28196 15 were combined with product code 28196 71.

[31]Does not include quantity produced by municipalities. For 1977, that quantity was withheld to avoid disclosing operations of individual companies; for 1972, amount produced by municipalities was 5,023 short tons.

[32]Represents quantities produced only for sale or interplant transfer.

[33]For 1977 and 1972, product code 28197 39 was combined with product code 28197 87.

[34]Excludes quantities consumed in manufacture of meta-, ortho-, and sesqui-silicates. Shipments figures included unspecified amounts shipped to other plants for use in manufacturing these silicates.

[35]For 1977, value of shipments included value of radioactive isotopes, nucleur fuels, and other radiation sources produced in privately owned and operated plants. These shipments are excluded from Current Industrial Reports data for 1977. This accounts for difference between two totals.

[36]For 1977, value of calcium hypochlorite was combined with product code 28199 30. For 1972, value of calcium hypochlorite and other industrial bleaches were combined with product code 28199 30.

[37]For 1977 and 1972, product code 28199 41 was combined with product code 28199 23.

[38]For 1977, value includes $21.4 million shipped by "nonmanufacturing" establishments classified in mineral industries. For 1972, value includes $19.8 million.

[39]Excludes pigment grades.

[40]Excludes quantity of liquid used to produce solid calcium chloride.

[41]For 1977 and 1972, product code 28199 36 was combined with product code 28199 37.

[42]Includes unspecified amounts of hydrogen peroxide produced but not withdrawn from system.

[43]For 1977 and 1972, product code was combined with product code 28199 44.

[44]For 1977, product code 28199 50 was combined with product codes 28199 51 and 28199 52.

[45]For 1977 and 1972, product code 28199 64 was combined with product code 28199 98.

[46]For 1977, product codes 28199 71 and 28199 72 were combined with product code 28199 73.

[47]Includes unspecified amounts produced and shipped on contract basis.

[48]Production and shipments data for 1969-77 were collected by Bureau of Mines.

[49]For 1977 and 1972, product code 28199 80 was combined with product code 28199 81.

[50]For 1977, data are not available; for 1972, data are based on that published in Current Industrial Reports MA-38Q(74)-1, Selected Atomic Energy Products.

[51]For 1972, product code 28197 43 was combined with product code 28197 45.

[52]For 1972, value of activated carbon, deodorizing grade and solvent recovery and gas absorption grade was included with product code 28199 98.

Table 6b. **Product Classes — Value of Shipments by All Producers by Geographic Area: 1977 and 1972**

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

Product class and geographic area	Value of product shipments	
	1977	1972
28121, CHLORINE, COMPRESSED OR LIQUEFIED		
United States	520.0	210.2
Middle Atlantic Division:		
New York	27.5	EE

- Represents zero. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. r Revised.

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

[2]Withheld because estimated figure is negative. This is consequence of using difference method of estimation (see Estimating Procedures in appendix B) and of improved establishment reporting that resulted in changing classification of shipments from n.s.k. code for 1972 Census to specified 5-digit product classes for this year. Four-digit total is best estimate, even though smaller than sum of 5-digit values.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable.

[1]For 1977, for some establishments, data have been estimated from central unit values, which are based on quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[2]Total cost of materials of establishments that did not report detailed materials data, including establishments that were not mailed a form.

[3]For 1972, material codes 289911, 281301, 140107, 147007, 265001, and 340001 were included with material code 970099.

[4]For 1972, materials consumed by kind amounted to $333.1 million. Detailed materials consumed data are not available.

[5]Total cost of materials purchased and consumed by privately owned and operated plants only; excludes data on materials purchased and consumed by government-owned, contractor-operated plants.

[6]Excludes quantities of sulfur derived from other sources, such as copper pyrites, hydrogen, sulfide, and smelter gas.

[7]For 1972, material codes 289911, 281301, 286519, 291167, 282104, 100107, 100207, 140107, 147007, 131111, 265001, and 340001 were included with material code 970099.

Table 8. **Employees Engaged in Construction: 1977**

Industry	Total		Establishments reporting construction employees				Response coverage ratio C/A
			Total		Engaged in construction		
	Employees (1,000)	Payroll (millions)	Employees (1,000)	Payroll (millions)	Employees (1,000)	Payroll (millions)	
	A	B	C	D	E	F	G
2819, Industrial inorganic chemicals, n.e.c.....	78.2	1,326.7	13.8	239.2	2.9	48.2	.18

Note: Establishments in selected industries were instructed to report number of employees, included in total employment, that were engaged in construction of major additions to the plant and utilized as a separate work force. Workers engaged in regular maintenance and repair operations were not included. Coverage Ratio (column G) indicates proportion of industry employment represented by establishments that reported construction employees. Coverage Ratio excludes: (a) construction workers not employed by the establishment (e.g., working under contract or provided by another establishment of the company); (b) establishments that reported having no construction employees; (c) establishments that did not respond to the inquiry, and (d) establishments that were not mailed a form, or from which a form had not been received at the time data were tabulated.

Plastics Materials, Synthetic Rubber, and Manmade Fibers

6a. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1977 and 1972 16
6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972 . . . 20
6c. Product Classes—Value Shipped by All Producers: 1963, 1967, 1972 to 1977 21

MATERIAL STATISTICS

7. Materials Consumed by Kind: 1977 and 1972 22

DESCRIPTION OF INDUSTRIES

PLASTICS MATERIALS, SYNTHETIC RUBBER, AND MANMADE FIBERS

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code	Title
2821	Plastics Materials and Resins
2822	Synthetic Rubber
2823	Cellulosic Manmade Fibers
2824	Organic Fibers, Noncellulosic

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

INDUSTRY 2821, PLASTICS MATERIALS AND RESINS

This industry comprises establishments primarily engaged in the manufacture of synthetic resins, plastics materials, and nonvulcanizable elastomers. Important products of this industry include cellulose plastic materials; phenolic and other tar acid resins; urea and melamine resins; vinyl resins; styrene resins; alkyd resins; acrylic resins; polyethylene resins; polypropylene resins; rosin modified resins; coumarone-indene and petroleum polymer resins; and miscellaneous resins including polyamide resins, silicones, polyisobutylenes, polyesters, polycarbonate resins, acetal resins, and fluorohydrocarbon resins; vulcanized fiber; and casein plastics. Establishments primarily engaged in the manufacture of fabricated plastics products or plastics film, sheet, rod, nontextile monofilaments, and regenerated cellulosic products, and vulcanized fiber are classified in industry 3079, whether from purchased resins or from resins produced in the same plant. Establishments primarily engaged in compounding purchased resins are also classified in industry 3079. Establishments primarily engaged in the manufacture of adhesives are classified in industry 2891. For a detailed list of products of industry 2821, see table 6a, product codes 28213 00 and 28214 00.

The total value of shipments for establishments classified in the Plastics Materials and Resins industry amounted to $10,818 million in 1977, an increase of 141 percent from 1972. The value of shipments of products classified as primary to the industry was $12,181 million, an increase of 171 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The change reflected a general trend in the shipments of all of the products of the industry. Value added by manufacture, at $4,143 million in 1977, was 92 percent above value added in 1972. All dollar digures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 57.2 thousand employees, an increase of 4 percent from 1972. The leading States in employment were Texas, New Jersey, Ohio, and Pennsylvania, accounting for approximately 35 percent of the industry's 1977 employment. Data for New Jersey and Pennsylvania have been withheld to avoid disclosing operations of individual companies.

The 1977 census obtained data on shipments of plastics materials and resins only at product class levels. Detailed figures on the production and sales of many of the products primary to the Plastics Materials and Resins industry are published annually by the U.S. International Trade Commission, in the report Synthetic Organic Chemicals: U.S. Production and Sales.

No establishments in this industry were excluded from the mail portion of the census. The data for a small number of establishments whose reports were not received at the time the data were tabulated were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for less than 1 percent of total value of shipments.

INDUSTRY 2822, SYNTHETIC RUBBER

This industry comprises establishments primarily engaged in the manufacture of synthetic rubber by polymerization or copolymerization. An elastomer, for the purpose of this classification, is a rubber-like material capable of vulcanization,

such as copolymers of butadiene and styrene or butadiene and acrylonitrile, polybutadienes, chloroprene rubbers, and isobutylene-isoprene copolymers. Butadiene copolymers containing less than 50 percent butadiene are classified in industry 2821. Natural chlorinated rubbers and cyclized rubbers are considered as semifinished products and are classified in industry 3069.

The total value of shipments for establishments classified in the Synthetic Rubber industry amounted to $1,863 million in 1977, an increase of 71 percent from 1972. The value of shipments of products classified as primary to the industry was $2,354 million, an increase of 82 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) Value added by manufacture, at $569 million in 1977, was 16 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 10.0 thousand employees, a decrease of 15 percent from 1972. The leading States in employment were Texas, Kentucky, Louisiana, and Ohio, accounting for approximately 90 percent of the industry's 1977 employment. Data for these States have been withheld to avoid disclosing operations of individual companies.

The 1977 census obtained data on shipments of synthetic rubber only at product class levels. Detailed figures on the shipments of synthetic rubber are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-30A, Rubber: Supply and Distribution for the U.S.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 2823, CELLULOSIC MANMADE FIBERS

This industry comprises establishments primarily engaged in the manufacture of cellulosic fibers (including cellulose acetate and regenerated cellulose such as rayon, by the viscose or cuprammonium process) in the form of monofilament, yarn, staple, or tow suitable for further manufacturing on spindles, looms, knitting machines, or other textile processing equipment. Establishments primarily engaged in the manufacture of textile glass fibers are classified in industry 3229. For a detailed list of products for industry 2823, see table 6a, product codes 28233 -- to 28233 61.

The 1977 definition of this industry has been revised from that given in the 1972 SIC manual, but the SIC number and title are unchanged. The 1977 revision transferred the manufacture of textured cellulosic manmade fibers produced in manmade fiber plants from industry 2282, to this industry. The change in classification had no significant effect on data for either industry.

The total value of shipments for establishments classified in the Cellulosic Manmade Fibers industry amounted to $999 million in 1977, an increase of 69 percent from 1972. The value of shipments of products classified as primary to the industry was $851 million, an increase of 24 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $326 million in 1977, was 34 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 15.9 thousand employees, a decrease of 7 percent from 1972. The leading States in employment were Tennessee, Virginia, South Carolina, and West Virginia, accounting for approximately 75 percent of the industry's 1977 employment. Data for these States have been withheld to avoid disclosing operations of individual companies.

No Establishments were excluded from the mail portion of the census. There were no establishments for which administrative records were used.

INDUSTRY 2824, ORGANIC FIBERS, NONCELLULOSIC

This industry comprises establishments primarily engaged in the manufacture of synthetic organic fibers, except cellulosic, in the form of monofilament yarn, staple, or tow suitable for further manufacture on spindles, looms, knitting machines, or other textile processing equipment. Establishments primarily engaged in the manufacture of glass fibers are classified in industry 3229.

The 1977 definition of this industry has been revised from that in the 1972 SIC manual, but the SIC number and title are unchanged. The 1977 revision transferred the manufacture of textured organic fibers, noncellulosic, produced in manmade fiber plants, from industry 2282 to this industry.

The effect of the revisions on the data are summarized in table 1c, Composition of New (1977) Industry Based on Old (1972) Standard Industrial Classification.

The total value of shipments for establishments classified in the Organic Fibers, Noncellulosic industry amounted to $6,380 million in 1977, an increase of 75 percent from 1972. The value of shipments of products classified as primary to the industry was $5,472 million, an increase of 86 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were nylon fibers, except producer textured, for which value of shipments increased 57 percent and polyester fibers, except producer textured, which showed a 58 percent increase in value of shipments. Value added by manufacture, at $2,804 million in 1977, was 37 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 74.0 thousand employees, a decrease of 5 percent from 1972. The leading States in employ-

ment were South Carolina, North Carolina, Virginia, and Tennessee, accounting for approximately 80 percent of the industry's 1977 employment. Data for Tennessee have been withheld to avoid disclosing operations of individual companies.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

Table 1a. Historical Statistics for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year[1]	Companies[2] (no.)	All establishments: Total (no.)	All establishments: With 20 employees or more (no.)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Expenditures and assets: New capital expenditures (million dollars)	Expenditures and assets: Gross value of fixed assets (million dollars)	End-of-year inventories (million dollars)	Ratios: Specialization (percent)	Ratios: Coverage (percent)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. r Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4]Data for 1967 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5]Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus these estimates may be of limited reliability.

[6]Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[9]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[10]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable.

Table 1c. Composition of New (1977) Industry Based on Old (1972) Standard Industrial Classification

(Under "Composition of new industry," row of data for "New industry" is for industry as now composed and rows of data for "Old industry" is for industries as they would have been if industry definition had not been changed. Under "Totals for industries on old SIC," data are for industries before revision and reflect amounts classified in specified new industry as well as in other new industries. The data in first five columns shows that portion of "old industry" that was moved to "new industry")

Industry	Composition of new industry--1977 data					Totals for industries on old SIC--1977 data				
	Establishments					Establishments				
	Total (number)	With 20 employees or more (number)	All employees (1,000)	Value added by manufacture (million dollars)	Value of shipments (million dollars)	Total (number)	With 20 employees or more (number)	All employees (1,000)	Value added by manufacture (million dollars)	Value of shipments (million dollars)
New industry 2824--Organic fibers, noncellulosic (includes producer-textured noncellulosic yarns).....	66	58	74.0	2,804.4	6,379.7	(X)	(X)	(X)	(X)	(X)
Old industry 2824--Organic fibers, noncellulosic (excludes producer-textured noncellulosic yarns).....	59	51	67.7	2,400.6	5,975.9	59	51	67.7	2,400.6	5,975.9
Old industry 2282--Throwing and winding mills.....	7	7	6.3	199.8	403.8	203	155	36.8	696.7	1,913.9

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. Summary Statistics for the Industry: 1977

[For explanation of terms, see appendix A]

Item	Unit of measure	Plastics materials and resins (SIC 2821)	Synthetic rubber (SIC 2822)	Cellulosic manmade fibers (SIC 2823)	Organic fibers, noncellulosic (SIC 2824)
Primary product specialization ratio[1]	percent	85	91	(D)	84
Coverage ratio[2]	do	74	71	(D)	97
All establishments	number	397	63	10	66
With 1 to 19 employees	do	87	33	-	8
With 20 to 99 employees	do	180	10	1	9
With 100 employees or more	do	130	20	9	49
All employees, average for year	1,000	57.2	10.0	15.9	74.0
Payroll for year, all employees	mil. dol.	985.6	185.2	212.8	1 086.1
Production workers:					
Average for year	1,000	36.7	7.1	12.5	54.8
March	do	36.3	7.0	12.4	54.0
May	do	36.7	7.2	12.5	55.6

Contract work	do	48.4	(D)	(D)	48.9
Value of shipments, including resales	do	10 818.2	1 863.3	998.9	6 379.7
Value of resales	do	168.8	(D)	(D)	62.7
Value added by manufacture	do	4 142.7	568.6	325.7	2 804.4
Manufacturers' inventories:					
Beginning of year	do	982.3	148.9	108.1	614.9
Finished products	do	545.4	93.9	43.7	317.7
Work in process	do	101.9	14.5	12.8	100.6
Materials, supplies, fuel, etc.	do	335.0	40.6	51.7	196.6
End of year	do	1 093.6	154.3	110.8	661.8
Finished products	do	618.7	92.6	50.8	351.9
Work in process	do	125.7	15.9	13.0	109.3
Materials, supplies, fuel, etc.	do	349.2	45.8	47.0	200.7
Capital expenditures for plant and equipment	do	915.5	53.5	33.5	349.6
New capital expenditures	do	895.2	53.2	29.3	338.5
New buildings and other structures	do	101.2	3.9	1.1	45.8
New machinery and equipment	do	794.0	49.3	28.2	292.7
Used capital expenditures	do	20.3	0.3	4.2	11.2

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977

(For explanation of terms, see appendix A. For description of annual survey of manufactures (ASM), see appendix B)

Item	Plastics materials and resins (SIC 2821)		Synthetic rubber (SIC 2822)		Cellulosic manmade fibers (SIC 2823)		Organic fibers, noncellulosic (SIC 2824)	
	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)
Purchased services:								
Cost of purchased services for repair of--								
Buildings and other structures	16.7	4	1.4	3	0.1	1	13.3	1
Response coverage ratio[2] (percent)	60	(X)	57	(X)	77	(X)	77	(X)
Machinery	119.7	2	12.6	2	2.9	1	16.7	1
Response coverage ratio[2] (percent)	62	(X)	68	(X)	82	(X)	75	(X)
Cost of purchased communication services	13.0	5	1.1	5	1.7	1	6.0	1
Response coverage ratio[2] (percent)	68	(X)	85	(X)	93	(X)	97	(X)
Rental payments	35.0	5	5.4	8	3.7	1	19.2	1
Buildings and other structures	5.5	8	1.6	14	0.3	1	4.0	1
Machinery and equipment	29.5	6	3.9	7	3.5	1	15.2	1
Supplemental labor costs	225.8	1	43.5	1	47.0	1	249.5	1
Legal costs	70.3	1	12.3	1	15.0	1	68.8	1
Voluntary costs	155.5	1	31.3	1	32.0	1	180.8	1
Gross value of depreciable assets:								
Buildings and other structures:								
Beginning of year	1,212.9	1	100.9	1	131.6	1	1,130.0	1
New capital expenditures	94.2	3	3.7	2	1.1	1	47.1	3
Used capital expenditures	2.9	2	-	(X)	-	(X)	1.1	1

End of year	1,282.5	1	104.3	1	126.0	1	1,131.5	1
Machinery and equipment:								
Beginning of year	4,721.8	1	621.6	1	669.4	1	5,089.9	1
New capital expenditures	786.6	1	48.8	1	28.2	1	299.6	3
Automobiles, trucks, etc., for highway use[3]	(2.1)	(A)	(0.1)	(A)	(0.1)	(A)	(0.2)	(A)
Computers and peripheral data processing equipment[3]	(0.7)	(A)	(Z)	(A)	(0.9)	(A)	(11.2)	(A)
All other[3]	756.2	3	(44.0)	(A)	(25.6)	78	268.0	8
New machinery and equipment, n.s.k.[4]	(27.5)	(A)	(D)	(A)	(D)	(A)	(20.2)	99
Used capital expenditures	16.5	1	0.2	1	4.2	1	10.1	1
Retirements	94.2	2	7.8	2	42.8	1	280.8	1
End of year	5,430.7	1	662.9	1	659.0	1	5,118.8	1
Total gross value of depreciable assets:								
Beginning of year	5,934.7	1	722.5	1	801.1	1	6,219.8	1
New capital expenditures	880.8	1	52.6	1	29.3	1	346.7	3
Used capital expenditures	19.4	1	0.2	1	4.2	1	11.2	1
Retirements	121.7	3	8.1	2	49.6	1	327.4	1
End of year	6,713.1	1	767.2	1	784.9	1	6,250.3	1
Depreciation charges during 1977	391.8	1	38.8	1	39.5	1	369.7	1
Buildings and other structures	56.6	1	4.1	2	4.0	1	59.0	1
Machinery and equipment	335.2	1	34.6	1	35.5	1	310.7	1

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

[For explanation of terms, see appendix A]

Industry and employment size class	E[1]	All establishments (no.)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)	End-of-year inventories (million dollars)

Covered by administrative records[2]	E0	4	(D)	(D)	(D)	(D)	(D)	(D)	(D)	(D)	(D)	(D)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. **Industry-Product Analysis — Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967**

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

1977 product code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. Table 5c. Industry-Product Analysis — Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

1977 product code	Product group, product class, and miscellaneous receipts	All industries	Plastics materials and resins (SIC 2821)	Synthetic rubber (SIC 2822)	Cellulosic manmade fibers (SIC 2823)	Organic fibers, noncellulosic (SIC 2824)	Other industries

Footnotes are on next page.

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00" or, in some cases, to appropriate product group code (4 digits) followed by "0 00."

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than $50,000 dollars or hours; under 50 employees.

[1]Quantity and value reported by all producers of product, not just those with shipments of $100,000 or more.

[2]Data on production and quantity and value of sales of specific resins are published in U.S. International Trade Commission report, Synthetic Organic Chemicals.

[3]For 1977, there were no establishments for which administrative records were used.

[4]For some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quanity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[5]For quantity of production of individual synthetic rubbers, see Current Industrial Reports MA-30A, "Rubber: Supply and Distribution for the U.S." For 1977 and 1972. For quantity of production and quantity and value of sales, see International Trade Commission's Annual Report, "Synthetic Organic Chemicals" for 1977 and 1972.

[6]Data include shipments of producer-textured manmade fibers, formerly classified in industry 2282, product code 22814 00, Textured, crimped, or bulked filament yarns, including stretch yarns.

[7]For 1972, product class totals 28243 and 28244 exclude values of noncellulosic manmade fibers, except producer textured, n.s.k. Producer textured n.s.k. data are included with product code 28245 00.

[8]Because of 1977 revisions in standard industrial classification, data for producer textured manmade fibers, are not available for 1972. 1972 data may be found in industry 2282, product class 22824.

Table 6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

Product class and geographic area	Value of product shipments	
	1977	1972
28213, THERMOPLASTIC RESINS AND PLASTICS MATERIALS		
United States	9,897.7	3,567.8

- Represents zero. (NA) Not available. n.s.k. Not specified by kind.

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

[2]For 1976 and earlier, value of shipments for industries 2823 and 2824 excluded shipments of producer textured manmade fibers. Data for those years were included in industry 2282, product class 22824.

Table 7. Materials Consumed by Kind: 1977 and 1972

(Includes quantity and cost of materials consumed or put into production by establishments classified only in this industry. For further explanation, see appendix A, Cost of materials)

Footnotes are on next page.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable.

[1]For some establishments, data have been estimated from central unit values, which are based on quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[2]For 1972, these material codes were included with material code 970099.

[3]Total cost of materials of establishments that did not report detailed materials data, including establishments that were not mailed a form.

[4]For 1977, these codes were included with material code 286001 to avoid disclosing operations of individual companies.

[5]From 1972 Census of Manufactures Supplemental Inquiry: Consumption of Materials, Parts, Containers, and Supplies During 1972 (Form MA-131).

TABLES

INDUSTRY STATISTICS

1a. Historical Statistics: 1977 and Earlier Years 5
1b. Selected Operating Ratios: 1977 and Earlier Years 6
2. Geographic Area: 1977 and 1972 7
3a. Summary Statistics: 1977 9
3b. Supplemental Statistics Based on Sample Estimates: 1977 10
4. Employment Size of Establishment: 1977 11
5a. Industry and Primary Product Class Specialization: 1977 12

PRODUCT STATISTICS

5b. Industry-Product Analysis—Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967 13
5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977 14
6a. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1977 and 1972 16
6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972 23
6c. Product Classes—Value Shipped by All Producers: 1963, 1967, 1972 to 1977 25

MATERIAL STATISTICS

7. Materials Consumed by Kind: 1977 and 1972 26

DESCRIPTION OF INDUSTRIES

DRUGS

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code	Title
2831	Biological Products
2833	Medicinals and Botanicals
2834	Pharmaceutical Preparations

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

INDUSTRY 2831, BIOLOGICAL PRODUCTS

This industry comprises establishments primarily engaged in the production of bacterial and virus vaccine, toxoids and analogous products (such as allergernic extracts), serums, plasmas, and other blood derivatives for human or veterinary use.

The total value of shipments for establishments classified in the Biological Products industry amounted to $899 million in 1977, an increase of 150 percent from 1972. The value of shipments of products classified as primary to the industry was $1,068 million, an increase of 115 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $563 million in 1977, was 143 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 15.7 thousand employees, an increase of 55 percent from 1972. The leading States in employment were California, New Jersey, Maryland, and Florida, accounting for approximately 48 percent of the industry's 1977 employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 4 percent of total value of shipments.

INDUSTRY 2833, MEDICINALS AND BOTANICALS

This industry comprises establishments primarily engaged in the manufacture of bulk organic and inorganic chemicals and their derivatives; and processing (grading, grinding, and milling) bulk botanical drugs and herbs. Establishments primarily engaged in the manufacture of agar-agar and similar products of natural origin, endocrine products, manufacture or isolation of basic vitamins, and the isolation of active medicinal principals such as alkaloids from botantical drugs and herbs are also included in this industry.

The total value of shipments for establishments classified in the Medicinals and Botanicals industry amounted to $1,890 million in 1977, an increase of 271 percent from 1972. The value of shipments of products classified as primary to the industry was $2,206 million, an increase of 178 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were synthetic organic chemicals, in bulk, for which shipments increased 181 percent. Value added by manufacture, at $1,162 million in 1977, was 347 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 14.4 thousand employees, an increase of 85 percent from 1972. The leading States in employment were New Jersey, Connecticut, Missouri, and Indiana, accounting for approximately 70 percent of the industry's 1977 employment. Data for these States have been withheld to avoid disclosing operations of individual companies.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 3 percent of total value of shipments.

INDUSTRY 2834, PHARMACEUTICAL PREPARATIONS

This industry comprises establishments primarily engaged in manufacturing, fabricating, or processing drugs in pharmaceutical preparations for human or veterinary use. The greater part of the products of these establishments is finished in the form intended for final consumption, such as ampuls, tablets, capsules, ointments, medicinal powders, solutions, and suspensions. Products of this industry consist of two important lines, namely: (1) pharmaceutical preparations promoted primarily to the dental, medicinal, or veterinary professions; and (2) pharmaceutical preparations promoted primarily to the public.

The total value of shipments for establishments classified in the Pharmaceutical Preparations industry amounted to $11,459 million in 1977, an increase of 60 percent from 1972. The value of shipments of products classified as primary to the industry was $9,640 million, an increase of 53 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were pharmaceutical preparations acting on the central nervous system and the sense organs, for human use, for which shipments increased 38 percent, vitamin, nutrient and hematinic preparations, for human use, for which shipments increased 91 percent. Value added by manufacture, at $8,214 million in 1977, was 46 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 126.4 thousand employees, an increase of 13 percent from 1972. The leading States in employment were New Jersey, New York, Illinois, and Pennsylvania, accounting for approximately 54 percent of the industry's 1977 employment. This represents a shift from 1972 when New Jersey, New York, Indiana, and Pennsylvania accounted for approximately 59 percent of the industry's employment.

The 1977 census obtained data on shipments of pharmaceutical preparations only at product class levels. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of pharmaceutical preparations are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-28G, Pharmaceutical Preparations, Except Biologicals. Some of these data are also shown in table 6a.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 2 percent of total value of shipments.

Table 1a. Historical Statistics for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year[1]	Companies[2] (no.)	All establishments: Total (no.)	All establishments: With 20 employees or more (no.)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Expenditures and assets: New capital expenditures (million dollars)	Expenditures and assets: Gross value of fixed assets (million dollars)	End-of-year inventories (million dollars)	Ratios: Specialization (percent)	Ratios: Coverage (percent)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. r Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4]Data for 1967 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5]Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus these estimates may be of limited reliability.

[6]Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[9]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[10]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. Summary Statistics for the Industry: 1977

[For explanation of terms, see appendix A]

Item	Unit of measure	Biological products (SIC 2831)	Medicinals and botanicals (SIC 2833)	Pharmaceutical preparations (SIC 2834)
Primary product specialization ratio[1]	percent	93	82	86
Coverage ratio[2]	do	73	68	97
All establishments	number	310	177	756
With 1 to 19 employees	do	197	101	463
With 20 to 99 employees	do	74	53	135
With 100 employees or more	do	39	23	158
All employees, average for year	1,000	15.7	14.4	126.4
Payroll for year, all employees	mil. dol.	210.2	219.9	2 029.5
Production workers:				
Average for year	1,000	8.8	8.4	63.1
March	do	8.8	8.3	62.3
May	do	8.7	8.4	63.0
August	do	8.8	8.5	63.5
November	do	8.7	8.5	63.4
Hours	millions	17.3	17.1	123.1
January to March	do	4.2	4.2	30.8
April to June	do	4.5	4.3	31.4
July to September	do	4.3	4.3	30.2
October to December	do	4.4	4.3	30.7
Wages	mil. dol.	90.5	127.2	779.4
Cost of materials, etc.	do	350.6	739.0	3 394.2
Materials, parts, containers, etc., consumed	do	309.4	616.1	2 831.3
Resales	do	24.6	48.5	318.6
Fuels consumed	do	4.0	48.6	63.9
Purchased electric energy	do	9.8	23.5	79.4
Contract work	do	2.9	2.2	101.0
Value of shipments, including resales	do	898.5	1 889.9	11 459.4
Value of resales	do	45.4	63.4	544.6
Value added by manufacture	do	563.4	1 162.2	8 214.4
Manufacturers' inventories:				
Beginning of year	do	222.3	297.9	1 711.5
Finished products	do	57.1	110.6	667.8
Work in process	do	106.0	91.5	416.5
Materials, supplies, fuel, etc.	do	59.1	95.8	627.2
End of year	do	246.9	307.0	1 892.6
Finished products	do	59.0	109.3	740.4
Work in process	do	119.6	104.0	493.2
Materials, supplies, fuel, etc.	do	68.3	93.7	659.0
Capital expenditures for plant and equipment	do	35.6	125.1	424.1
New capital expenditures	do	35.4	123.8	419.3
New buildings and other structures	do	11.3	19.8	123.8
New machinery and equipment	do	24.2	104.0	295.5
Used capital expenditures	do	0.2	1.3	4.9

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. *n.e.c.* Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977

(For explanation of terms, see appendix A. For description of annual survey of manufactures (ASM), see appendix B)

Item	Biological products (SIC 2831)		Medicinals and botanicals (SIC 2833)		Pharmaceutical preparations (SIC 2834)	
	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)
Purchased services:						
Cost of purchased services for repair of--						
Buildings and other structures	2.1	5	6.1	2	19.6	5
Response coverage ratio[2] (percent)	71.0	(X)	73.1	(X)	84.4	(X)
Machinery	4.3	9	12.5	3	42.0	13
Response coverage ratio[2] (percent)	64.0	(X)	64.7	(X)	88.2	(X)
Cost of purchased communication services	5.8	8	3.3	10	30.6	11
Response coverage ratio[2] (percent)	67.0	(X)	69.8	(X)	87.4	(X)
Rental payments	6.7	5	(3.7)	23	66.8	12
Buildings and other structures	3.2	8	(2.0)	41	(21.2)	16
Machinery and equipment	3.5	6	1.7	9	(45.6)	17
Supplemental labor costs	41.9	2	41.9	2	374.9	1
Legal costs	20.4	1	13.8	4	133.4	1
Voluntary costs	21.5	4	28.1	2	241.5	1
Gross value of depreciable assets:						
Buildings and other structures:						
Beginning of year	145.1	4	237.5	4	1,548.1	2
New capital expenditures	(13.0)	28	17.3	7	125.3	3
Used capital expenditures	(0.1)	67	0.1	1	3.7	2
Retirements	1.6	9	3.2	5	16.6	8
End of year	156.6	3	251.7	4	1,660.5	1
Machinery and equipment:						
Beginning of year	158.0	4	815.7	2	1,850.9	1
New capital expenditures	27.9	13	99.7	4	293.1	1
Automobiles, trucks, etc., for highway use[3]	(1.7)	(A)	(0.6)	(A)	(7.6)	(A)
Computers and peripheral data processing equipment[3]	(0.9)	(A)	(1.4)	(A)	(9.5)	(A)
All other[3]	(17.4)	(A)	(93.8)	21	257.8	8
New machinery and equipment, n.s.k.[4]	(7.8)	(A)	(3.9)	(A)	(18.2)	(A)
Used capital expenditures	(0.3)	69	0.2	1	(1.9)	38
Retirements	4.2	4	18.3	3	68.5	9
End of year	182.0	3	897.3	2	2,077.3	1
Total gross value of depreciable assets:						
Beginning of year	303.1	4	1,053.1	2	3,398.9	1
New capital expenditures	(40.9)	18	117.0	5	418.4	1
Used capital expenditures	(0.3)	54	0.3	1	5.6	13
Retirements	5.8	4	21.4	4	85.1	6
End of year	338.5	3	1,148.9	2	3,737.8	1
Depreciation charges during 1977	21.4	3	62.9	4	202.8	4
Buildings and other structures	7.8	2	8.7	4	60.0	2
Machinery and equipment	13.6	3	54.2	4	142.8	4

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

[For explanation of terms, see appendix A]

Industry and employment size class	E[1]	All establishments (no.)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)	End-of-year inventories (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

Covered by administrative records[2]	E0	348	1.4	20.9	0.7	1.4	8.2	78.3	29.8	108.1	2.8	17.4

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)				
2831	**Biological products:**										
	Entire industry	310	15.7	210.2	8.8	17.3	90.5	563.4	350.6	898.5	35.4

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. Industry-Product Analysis — Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

1977 product code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product† specialization ratio Col. B / Col. Table 5c. Industry-Product Analysis — Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

	As reported in Current Industrial Reports MA-28G, Pharmaceutical Preparations, Except Biologicals	(NA)	1,284.6	1,059.5	33.4	175.5	16.3	948.1
	Anti-infective agents, excluding corticoid-anti-infective combinations (see code 28341 15):							
28348 11	Amebacides and trichomonacides	(NA)	29.0	23.7	4.6	.7	-	8.8
28348 15	Anthelmintics	(NA)						6.1
	Systemic antibiotic preparations, total	(NA)	919.3	(g)	-	(X)	(f)	647.2
28348 21	Broad and medium spectrum (single or in combinations with other antibiotics, except penicillins)	(NA)	611.0	607.0	-	(X)	4.0	415.1

See footnotes at end of table.

Table 6a. **Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972** — Con.

(Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation, see appendix A, Value of shipments)

1977 product code	Product	Number of companies with shipments of $100,000 or more	1977 value of product shipments[1] (million dollars)					1972 value of product shipments[8] (million dollars)
			Total	Prescription legend[4]	Over-the-counter professional[5]	Proprietary[6]	Bulk[7]	
2834- --	PHARMACEUTICAL PREPARATIONS--Con.							
28348 --	Pharmaceutical preparations affecting parasitic and infective diseases, for human use--Con.							
	As reported in Current Industrial Reports MA-28G, Pharmaceutical Preparations, Except Biologicals--Con.							
	Anti-infective agents, excluding corticoid-anti-infective combinations (see code 28341 15)--Con.							
	Systemic antibiotic preparations--Con.							
	Penicillins (single):							
28348 23	Injectable	(NA)	104.4	(g)	-	(X)	(e)	47.5
28348 25	Other forms	(NA)	182.8	(g)	-	(X)	(c)	163.1
28348 27	Penicillin-streptomycin and/or dihydrostreptomycin combinations	(NA)	2.0	2.0	-	(X)	-	2.2
28348 29	Streptomycin and/or dihydrostreptomycin (single and combinations, except penicillin combinations)	(NA)						3.4
28348 31	Antibiotics in combination with sulfonamides	(NA)	19.2	19.2	-	(X)	-	2.7
28348 39	Other systemic antibiotic preparations	(NA)						13.2
28348 41	Topical antibiotic preparations	(NA)	22.8	15.3	3.3	4.2	-	16.0
	Tuberculostatic agents:							
28348 51	Izoniazid (isonicotinic acid hydrazide) preparations	(NA)	.8	.8	-	-	-	1.2
28348 55	Other antituberculars	(NA)	13.7	13.7	-	-	-	12.3
28348 61	Antimalarials (plasmodicides)	(NA)	5.8	(d)	(c)	(a)	(a)	9.4
28348 63	Sulfonamides, except antibiotic-sulfonamide combinations	(NA)	43.7	43.7	-	(X)	-	30.6
28348 65	Antifungal preparations	(NA)	69.5	(g)	(f)	(f)	(a)	44.3
28348 69	Other anti-infective agents	(NA)	7.2	4.5	(c)	(c)	(a)	8.7
	Antibacterials and antiseptics:							
28348 71	General	(NA)	39.7	8.9	5.0	25.9	-	28.3
28348 75	Mouth and throat preparations	(NA)	122.2	(d)	(a)	118.8	(a)	131.8
28348 98	Other pharmaceutical preparations affecting parasitic and infective diseases	(NA)	10.9	(c)	-	(e)	-	1.9
28348 00	Pharmaceutical preparations affecting parasitic and infective diseases, for human use, n.s.k.	(NA)	.1	(a)	(a)	(a)	(X)	1.4
28349 --	Pharmaceutical preparations for veterinary use:							
	As reported in census of manufactures	51	353.3	(X)	(X)	(X)	(X)	240.3
	As reported in Current Industrial Reports MA-28G, Pharmaceutical Preparations, Except Biologicals	(NA)	354.0	171.5	76.7	94.5	11.2	213.6
28349 11	Anesthetics	(NA)	3.5	3.3	(a)	-	(a)	2.1
28349 21	Anthelmintics	(NA)	57.5	22.9	9.1	(g)	(a)	26.6
28349 23	Antibiotics	(NA)	149.0	90.2	31.5	18.6	8.7	84.5
28349 25	Antiseptics, wound dressings, and fungicides	(NA)	8.5	4.0	2.7	(c)	(a)	6.9
28349 31	Hematinics	(NA)	.9	(a)	(a)	.4	-	1.8

28349 35	Hormones	(NA)	14.1	12.7	(a)	(c)	-	6.0
28349 37	Intravenous solutions and electrolytes	(NA)	4.2	1.5	(c)	(b)	-	4.0
28349 41	Nitrofurans	(NA)	(17)	(17)	(17)	(17)	(17)	(17)
28349 43	Nutrients and tonics	(NA)	3.9	(b)	1.6	1.2	(a)	4.1
28349 45	Parasiticides, external	(NA)	35.4	(b)	7.6	26.3	(b)	17.2
28349 47	Sulfonamides	(NA)	12.4	7.4	(c)	2.5	(b)	18.5
28349 51	Tranquilizers and ataractics	(NA)	4.1	2.1	(c)	-	(a)	2.3
28349 55	Vitamins and minerals	(NA)	23.4	(d)	9.1	9.7	(a)	17.5
28349 98	Other pharmaceutical preparations for veterinary use	(NA)	17 36.0	17 20.4	17 8.4	17 (e)	17 (b)	17 21.9
28349 00	Pharmaceutical preparations for veterinary use, n.s.k.	(NA)	17.9	17 (a)	17 (a)	17 (a)	(X)	
28340 00	Pharmaceutical preparations, except biologicals, n.s.k., typically for companies with 5 employees or more (see note)	(NA)	97.2	(X)	(X)	(X)	(X)	59.1
28340 02	Pharmaceutical preparations, except biologicals, n.s.k., typically for companies with less than 5 employees (see note)	(NA)	108.1	(X)	(X)	(X)	(X)	27.5

Footnotes are on next page.

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5-digits) followed by "00" or, in some cases, to appropriate product group code (4 digits) followed by "0 00."

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Other disclosure symbols (in thousands): (a) under $500; (b) $500 to $999; (c) $1,000 to $2,499; (d) $2,500 to $4,999; (e) $5,000 to $9,999; (f) $10,000 to $19,999; (g) over $20,000. (NA) Not available. n.e.c. Not eslewhere classified. n.s.k. Not specified by kind. (X) Not applicable.

[1]Value reported by all producers of product, not just those with shipments of $100,000 or more.

[2]1977 and 1972 totals for product classes 28314, 28315, and 28316 are not completely comparable because of 1977 revision of product class structure for industry 2831. For 1977, product class 28316 was formed from parts of product classes 28314 and 28315. For 1972, amount of product class 28316 included in totals for 28314 and 28315 is not known.

[3]For quantity of production and quantity and value of sales of individual synthetic organic chemicals, see U.S. International Trade Commission Annual Report, Synthetic Organic Chemicals: Production and Sales, for 1977 and 1972.

[4]Products which by federal law are available only by prescription from a licensed physician.

[5]Products sold over-the-counter and primarily promoted to the dental, medical, or veterinary professions.

[6]Products advertised or otherwise promoted to the general public.

[7]Represents dosage from pharmaceutical preparations shipped in bulk.

[8]For 1972, detailed data for ethical and proprietary domestic shipments, and export shipments appear in Volume II, 1972 Census of Manufactures, in table 6a of chapter devoted to this industry.

[9]Total includes $205.3 million of pharmaceutical preparations, not specified by kind, which were reported in census of manufactures (see product codes 28340 00 and 28340 02). Detailed information regarding Prescription Legend, OTC Professional, and Proprietary for this n.s.k. is not available; therefore, detail data does not add to total only at industry level.

[10]Over-the-Counter Professional combined with Prescription Legend for product code 28341 21.

[11]For 1972, product code 28341 31 was combined with product code 28341 39.

[12]For 1977 and 1972, product code 28342 11 was combined with product code 28342 98.

[13]For 1972, product code 28342 41 was combined with product code 28342 98.

[14]For 1972, product codes 28344 65 and 28344 71 were combined with product code 28344 79.

[15]Excludes non-pharmceutical type cough drops, which are classified as primary to Industry 2065, Confectionery Products.

[16]For 1977, product code 28345 85 was combined with product code 28345 98.

[17]For 1977, product code 28349 41 was combined with product code 28349 98; for 1972, product code 28349 41 was combined with product codes 28349 98 and 28349 00.

Table 6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

Product class and geographic area	Value of product shipments	
	1977	1972
28313, ANTITOXINS, ANTIVENINS, SIMILAR DERIVATIVES, HUMAN USE		
United States	26.6	18.3

(NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards.

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

[2]1977 totals for product classes 28314, 28315, and 28316 are not completely comparable to prior years because of 1977 revision to product class structure for industry 2831. For 1977, product class 28316 was formed from parts of product classes 28314 and 28315. Amount of product class 28316 included in totals for 28314 and 28315 is not known for prior years.

Table 7. Materials Consumed by Kind: 1977 and 1972

(Includes cost of materials consumed or put into production by establishments classified only in this industry. For further explanation, see appendix A, Cost of materials)

1977 material code	Material	1977, delivered cost (million dollars)	1972, delivered cost (million dollars)
	INDUSTRY 2831, BIOLOGICAL PRODUCTS		
	Materials, containers, and supplies	309.4	123.3
283318	Antibiotics for human and veterinary use, bulk, excluding antibiotics for animal feeds	2.9	
283317	Sulfa drugs, bulk	2.4	
283301	Vitamins, natural and synthetic, bulk, excluding vitamins for animal feeds	(D)	
019101	Agricultural products, crude, including flowers, grains, seeds, herbs, etc	17.1	
200101	Processed food and kindred products, including lactose, meat packing plant products, yeast, etc	5.8	
283111	Blood derivatives and extenders	115.7	
283121	Acetyl salicylic acid	-	(1)

5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977 13
6a. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1977 and 1972 14
6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972 20
6c. Product Classes—Value Shipped by All Producers: 1963, 1967, 1972 to 1977 21

MATERIAL STATISTICS

7. Materials Consumed by Kind: 1977 and 1972 22

DESCRIPTION OF INDUSTRIES

SOAP, CLEANERS, AND TOILET GOODS

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries.

SIC Code and Title

2841 Soap and Other Detergents
2842 Polishes and Sanitation Goods
2843 Surface Active Agents
2844 Toilet Preparations

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a–5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

INDUSTRY 2841, SOAP AND OTHER DETERGENTS

This industry comprises establishments primarily engaged in the manufacture of soap, synthetic organic detergents, inorganic alkaline detergents, or any combination thereof, and establishments engaged in the production of crude and refined glycerin from vegetable and animal fats and oils. Establishments primarily engaged in the manufacture of shampoos or shaving products, whether from soap or synthetic detergents, are classified in industry 2844, and synthetic glycerin in industry 2869.

The total value of shipments for establishments classified in the Soap and Other Detergents industry amounted to $5,671 million in 1977, an increase of 67 percent from 1972. The value of shipments of products classified as primary to the industry was $5,000 million, an increase of 75 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were household, dry (solid or powder), heavy-duty, synthetic organic detergents (phosphate free), for which shipments increased 578 percent, and household toilet soap, for which shipments increased 81 percent. Value added by manufacture, at $2,868 million in 1977, was 41 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 32.1 thousand employees, an increase of 2 percent from 1972. The leading States in employment were New Jersey, California, Ohio, and Illinois, accounting for 40 percent of the industry's 1977 employment. These same States were in the forefront for 1972 when they accounted for 43 percent of the industry's employment; however, their relative importance has shifted.

Establishments of single-unit companies in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 5 percent of total value of shipments.

INDUSTRY 2842, POLISHES AND SANITATION GOODS

This industry comprises establishments primarily engaged in the manufacture of furniture, metal, and other polishes; waxes and dressings for fabricated leather and other materials; household, institutional, and industrial plant disinfectants and deodorants; household bleaches; dry cleaning preparations; and other sanitation preparations.

The total value of shipments for establishments classified in the Polishes and Sanitation Goods industry amounted to $3,136 million in 1977, an increase of 68 percent from 1972. The value of shipments of products classified as primary to the industry was $2,669 million, an increase of 55 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were specialty cleaning and sanitation preparations,

for which shipments increased 67 percent. Value added by manufacture, at $1,664 million in 1977, was 49 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 22.0 thousand employees, a decrease of 12 percent from 1972. The leading States in employment were Illinois, California, New Jersey, and New York, accounting for 43 percent of the industry's 1977 employment.

Establishments of single-unit companies in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 6 percent of total value of shipments.

INDUSTRY 2843, SURFACE ACTIVE AGENTS

This industry comprises establishments primarily engaged in the manufacture of surface active preparations for use as wetting agents, emulsifiers, and penetrants. Establishments engaged in the manufacture of sulfonated oils and fats and related products are also included in this industry.

The total value of shipments for establishments classified in the surface active agents industry amounted to $944 million in 1977, an increase of 104 percent from 1972. The value of shipments of products classified as primary to the industry was $1,341 million, an increase of 131 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were bulk service active agents, for which shipments increased 194 percent. Value added by manufacture, at $345 million in 1977, was 65 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 6.5 thousand employees, a decrease of 6 percent from 1972. The leading States in employment were New Jersey, Illinois, Pennsylvania, and South Carolina, accounting for approximately 50 percent of the industry's 1977 employment. Data for South Carolina have been withheld to avoid disclosing operations of individual companies.

Establishments of single-unit companies in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 3 percent of total value of shipments.

INDUSTRY 2844, TOILET PREPARATIONS

This industry comprises establishments primarily engaged in the manufacture of perfumes (natural and synthetic), cosmetics, and other toilet preparations. It also includes establishments primarily engaged in blending and compounding perfume bases, and those manufacturing shampoos and shaving products, whether from soap or synthetic detergents. Establishments primarily engaged in the manufacture of synthetic perfume and flavoring are classified in industry 2869, and essential oils in industry 2899.

The total value of shipments for establishments classified in the Toilet Preparations industry amounted to $6,557 million in 1977, an increase of 62 percent from 1972. The value of shipments of products classified as primary to the industry was $6,394 million, an increase of 51 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were perfumes, toilet waters, and colognes, for which shipments increased 62 percent, and hair preparations, including shampoos, for which shipments increased 38 percent. Value added by manufacture, at $4,527 million in 1977, was 60 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 50.9 thousand employees, an increase of 6 percent from 1972. The leading States in employment were New Jersey, New York, California, and Illinois, accounting for 63 percent of the industry's 1977 employment. These same States were in the forefront for 1972 when they accounted for 62 percent of the industry's employment; however their relative importance has shifted.

Establishments of single-unit companies in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 3 percent of total value of shipments.

(D) Withheld to avoid disclosing operations of individual companies. (NA) Not available.

[1] In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the industry chapter.

[2] For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3] Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4] Data for 1967 and 1963 were derived from table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5] Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus these estimates may be of limited reliability.

[6] Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7] Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8] Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

(For explanation of terms, see appendix A)

Year	Payroll per employee (dol.)	Assets per employee (dol.)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

Footnotes are on next page.

Table 2. Industry Statistics by Geographic Area: 1977 and 1972—Con.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not collected. (Z) Less than 50 thousand dollars; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1--10 to 19 percent; E2--20 to 29 percent; E3--30 to 39 percent; E4--40 to 49 percent; E5--50 to 59 percent; E6--60 to 69 percent; E7--70 to 79 percent; E8--80 to 89 percent; E9--90 to 99 percent; E0--100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employement size range is indicated by one of the following symbols: AA--150 to 249 employees; BB--250 to 499 employees; CC--500 to 999 employees; EE--1,000 to 2,499 employees; FF--2,500 employees or more.

Table 3a. Summary Statistics for the Industry: 1977

(For explanation of terms, see appendix A)

Item	Soap and other detergents (SIC 2841)	Polishes and sanitation goods (SIC 2842)	Surface active agents (SIC 2843)	Toilet preparations (SIC 2844)
Primary product specialization ratio[1] ..... percent	84	76	81	95
Coverage ratio[2] ..... do..	89	79	55	87
All establishments ..... number..	635	1,018	175	693
With 1 to 19 employees ..... do..	410	781	91	501
With 20 to 99 employees ..... do..	161	192	70	96
With 100 or more employees ..... do..	64	45	14	96
All employees, average for year ..... 1,000..	32.1	22.0	6.5	50.9
Payroll for year, all employees ..... mil. dol..	521.6	274.1	101.7	627.9
Production workers:				
Average for year ..... 1,000..	20.5	14.1	3.7	32.8
March ..... do..	20.1	13.6	3.6	31.9
May ..... do..	20.4	13.8	3.7	32.1
August ..... do..	20.8	14.3	3.7	34.1
November ..... do..	20.6	14.3	3.8	33.0
Hours ..... millions..	41.0	27.2	7.7	62.9
January to March ..... do..	10.2	6.2	1.9	14.8
April to June ..... do..	10.2	6.8	2.0	15.4
July to September ..... do..	10.4	7.1	1.9	16.2
October to December ..... do..	10.2	7.0	1.9	16.4
Wages ..... mil. dol..	308.1	148.3	47.2	318.9
Cost of materials, etc ..... do..	2,817.9	1,478.5	602.6	2,059.4
Materials, parts, containers, etc., consumed ..... do..	2,519.9	1,173.6	542.0	1,708.2
Resales ..... do..	219.9	262.3	33.0	249.5
Fuels consumed ..... do..	43.2	7.7	18.4	9.6
Purchased electric energy ..... do..	23.4	10.2	7.8	17.1
Contract work ..... do..	11.5	24.7	1.4	75.0
Value of shipments, including resales ..... do..	5,671.4	3,136.2	943.5	6,557.2
Value of resales ..... do..	336.7	324.7	32.4	653.0
Value added by manufacture ..... do..	2,867.5	1,663.7	345.0	4,526.7
Manufacturers' inventories:				
Beginning of year ..... do..	616.7	263.1	106.7	712.0
Finished products ..... do..	310.4	132.4	58.4	304.6
Work in process ..... do..	70.0	15.2	6.0	51.1
Materials, supplies, fuel, etc ..... do..	236.3	115.6	42.3	356.2
End of year ..... do..	643.4	273.5	116.2	760.3
Finished products ..... do..	319.4	144.0	62.9	322.5
Work in process ..... do..	75.0	10.5	5.7	62.1
Materials, supplies, fuel, etc ..... do..	249.0	119.0	47.6	375.7
Capital expenditures for plant and equipment ..... do..	140.2	59.7	42.1	110.9
New capital expenditures ..... do..	134.9	51.8	40.9	105.6
New buildings and structures ..... do..	15.9	12.7	8.1	29.0
New machinery and equipment ..... do..	119.0	39.1	32.8	76.6
Used capital expenditures ..... do..	5.3	8.0	1.2	5.3

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not collected. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.
[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.
[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977

(For explanation of terms, see appendix A. For description of annual survey of manufactures (ASM), see appendix B)

Item	Soap and other detergents (SIC 2841)		Polishes and sanitation goods (SIC 2842)		Surface active agents (SIC 2843)		Toilet preparations (SIC 2844)	
	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)
Purchased services:								
Cost of purchased services for repair of--								
Buildings and other structures	54.8	1	3.7	12	1.2	14	3.3	7
Response coverage ratio[2] (percent)	75.6	(X)	60.6	(X)	60.3	(X)	88.0	(X)
Machinery	50.3	1	8.7	8	8.8	6	(9.4)	14
Response coverage ratio[2] (percent)	62.1	(X)	68.1	(X)	60.8	(X)	54.3	(X)
Cost of purchased communication services	63.9	1	6.0	9	(2.4)	20	11.6	5
Response coverage ratio[2] (percent)	68.2	(X)	70.8	(X)	62.7	(X)	79.7	(X)
Rental payments	16.7	7	14.9	8	4.6	14	28.8	4
Buildings and other structures	8.6	11	8.4	9	(1.7)	19	16.8	4
Machinery and equipment	8.0	8	(6.5)	15	(2.9)	17	12.0	7
Supplemental labor costs	117.9	1	45.5	4	15.4	8	119.5	1
Legal costs	38.8	2	20.4	3	6.3	9	53.5	2
Voluntary costs	79.1	2	25.1	5	9.1	8	66.0	2
Gross value of depreciable assets:								
Buildings and other structures:								
Beginning of year	336.5	2	167.2	4	66.2	6	340.6	2
New capital expenditures	17.4	14	12.2	10	12.4	12	30.2	8
Used capital expenditures	(5.2)	85	3.0	2	(.8)	47	2.9	2
Retirements	4.1	9	2.0	4	(1.9)	37	2.5	2
End of year	355.0	3	180.3	4	77.6	5	371.2	2
Machinery and equipment:								
Beginning of year	984.4	2	265.1	4	220.4	4	492.2	2
New capital expenditures	125.5	6	42.2	11	33.8	8	76.7	4
Automobiles, trucks, etc., for highway use[3]	(2.1)	(A)	(5.3)	(A)	(.6)	(A)	(1.0)	(A)
Computers and peripheral data processing equipment[3]	(.2)	(A)	(.6)	(A)	(.2)	(A)	(3.0)	(A)
All other[3]	(102.3)	20	(34.8)	63	(27.3)	73	(66.9)	30
New machinery and equipment, n.s.k.[4]	(21.0)	95	(1.5)	(A)	(5.7)	(A)	(5.8)	(A)
Used capital expenditures	4.0	4	4.2	6	(.1)	20	2.3	8
Retirements	26.3	2	13.9	14	(5.0)	21	18.4	1
End of year	1,088.1	1	297.6	5	249.3	4	552.8	2
Total gross value of depreciable assets:								
Beginning of year	1,321.0	1	432.3	3	286.6	4	832.8	2
New capital expenditures	143.0	7	54.4	10	46.2	9	106.9	4
Used capital expenditures	(9.6)	46	7.1	4	(1.0)	40	5.2	4
Retirements	30.3	2	15.8	12	(6.9)	24	20.9	1
End of year	1,443.2	1	478.0	3	326.9	4	924.0	2
Depreciation charges during 1977	73.7	2	29.7	6	22.4	3	(53.8)	2
Buildings and other structures	11.3	4	6.6	5	3.3	7	12.6	2
Machinery and equipment	62.4	2	23.1	7	19.1	4	41.2	3

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

(For explanation of terms, see appendix A)

Industry and employment size class[1]	All establishments (no.)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)	End-of-year inventories (million dollars)
		Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

(D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available.
(Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1--10 to 19 percent; E2--20 to 29 percent; E3--30 to 39 percent; E4--40 to 49 percent; E5--50 to 59 percent; E6--60 to 69 percent; E7--70 to 79 percent; E8--80 to 89 percent; E9--90 to 99 percent; E0--100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied to other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

(Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary; excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A)

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified.
(S) Withheld because estimate did not meet publication standards. (X) Not collected. (Z) Less than 50 thousand dollars or hours; under 50 employees.

Table 5b. Industry-Product Analysis—Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. Extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

1977 product code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. Table 5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977

(Millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product group that have at least $2 million in shipments from establishments classified in one of the industries included in this chapter are shown. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made in industries not included in this chapter, the value of such shipments is shown in the "All other industries" column. The specified "All other industries" are listed at the end of the table if they account for more than $5 million of the products primary to this chapter. For explanation of terms, see appendix A)

See footnotes at end of table.

Table 6a. **Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972** - Con.

(Includes value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation see appendix A, Value of shipments)

1977 product code	Product	1977		1972, value of product shipments (million dollars)
		Number of companies with shipments of $100,000 or more	Value of product shipments[1] (million dollars)	
2844- --	TOILET PREPARATIONS--Con.			
28445 --	Other cosmetics and toilet preparations--Con.			
	Manicuring preparations--Con.			
28445 33	Nail lacquer and enamel removers	9	23.1	26.9
28445 39	Other manicuring preparations	7	22.8	
	Powder:			
28445 41	Talcum and toilet powder	26	233.7	121.1
28445 43	Face powder	22	62.7	41.3
28445 45	Liquid and compact, for wet application	8	31.4	20.6
28445 48	Other powder, including foot powder (cream, sachet, and paste)	11	13.2	16.0
28445 55	Premoistened towelettes, including wipes for babies	5	22.2	([10])
28445 61	Bath salts, tablets, oils, and bubble baths	27	120.1	155.4
28445 91	Depilatories	5	10.9	[10]65.9
28445 98	Other cosmetics and toiletries	17	116.1	
28445 00	Other cosmetics and toilet preparations, n.s.k.	(NA)	46.5	46.8
28440 00	Toilet preparations, n.s.k., typically for establishments with 5 employees or more (see note)	(NA)	152.0	65.7
28440 02	Toilet preparations, n.s.k., typically for establishments with less than 5 employees (see note)	(NA)	144.6	30.3

Note: In 1977 Census of Manufactures, shipments data for establishments of small companies, typically those with fewer than 5 employees, were estimated from administrative records data rather than collected from respondents. These shipments figures (discussed in appendix A) are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded to appropriate product class (5 digits) followed by "00," or in some cases to appropriate industry (4 digits) followed by "0 00."

(D) Withheld to avoid disclosing operations of individual companies. [r]Revised. (S) Withheld because estimate did not meet publication standards. (X) Not collected. (NA) Not available. n.s.k. Not specified by kind.

[1]Quantity and value reported by all producers of product, not just those with shipments of $100,000 or more.

[2]For some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[3]Definitions of specified products:

Alkaline detergents--Mixtures designed primarily for cleaning hard surfaces such as dishes, floors, walls, counters, vehicles, appliances, etc.

Soap--Products, including combinations of synthetic organic surface active agents alkaline detergents, containing more than 25 percent anhydrous soap.

Synthetic organic detergents--Mixtures containing one or more of the following compounds: Soap, alkaline detergents, synthetic organic surface active agents, sequestrants, etc., designed primarily for laundry use or for hand dishwashing.

Heavy-duty phosphate-based detergents--Detergent products for laundry applications with a substantial phosphate builder.

Heavy-duty phosphate-free detergents--Detergent products for laundry applications containing alkaline compounds, but excluding phosphate builders.

Light-duty detergents--Detergent products for hand dishwashing and for fine fabrics with little or no phosphate builder.

Presoaks--Products containing essentially one or more of the following ingredients: Alkaline compounds, synthetic organic surface active agents, soap, and soil releasing agents such as (but not confined to) protease, amylase, and liposes (enzymes).

[4]For 1972, product codes 28413 51 and 28413 98 were combined to avoid disclosing operations of individual companies.

[5]Data on quantities of glycerine (synthetic and natural) produced are shown in Current Industrial Reports M20K, Fats and Oils--Production, Consumption, and Factory and Warehouse Stocks.

[6]For synthetic glycerin, quantities produced and quantities and values shipped are shown in U.S. International Trade Commission's annual report, Synthetic Organic Chemicals, United States Production and Sales.

[7]For quantity of production and quantity and value of sales of synthetic organic chemicals included in this grouping, see U.S. Tariff Commission's Annual Report, "Synthetic Organic Chemicals, United States Production and Sales," for 1977 and 1972.

[8]For 1972, product code 28443 64 was included with product code 28443 98.

[9]For 1972, product code 28444 51 was included with product code 28444 98.

[10]For 1972, product code 28445 55 was included with product code 28445 98.

Table 6b. Product Classes — Value of Shipments by All Producers by Geographic Area: 1977 and 1972

(Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

rRevised. (S) Withheld because estimate did not meet publication standards. (NA) Not available. n.s.k. Not specified by kind.

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (S) Withheld because estimate did not meet publication standards. (X) Not collected. (NA) Not available. n.s.k. Not specified by kind.

[1]For some establishments, data have been estimated from central unit values, which are based on quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published quantity figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[2]For 1972, material code was included with material code 970099.

[3]Total cost of materials of establishments that did not report detailed materials data, including establishments that were not mailed a form.

[4]Detailed materials consumed data are not available for 1972.

DESCRIPTION OF INDUSTRIES

PAINTS AND ALLIED PRODUCTS

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2851 Paints and Allied Products

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

INDUSTRY 2851, PAINTS AND ALLIED PRODUCTS

This industry comprises establishments primarily engaged in the manufacture of paints (in paste and ready mixed form); varnishes; lacquers; enamels and shellac; putties; wood fillers and sealers; paint and varnish removers; paint brush cleaners and allied paint products. Establishments primarily engaged in the manufacture of carbon black are classified in Industry 2895, Carbon Black; bone black, lamp black and inorganic pigments in Industry 2816, Inorganic Pigments; organic color pigments in Industry 2865, Cyclic Crudes, and Cyclic Intermediates, Dyes and Organic Pigments; synthetic resins in Industry 2821, Plastic Materials and Resins; printing ink in Industry 2893, Printing Inks; caulking compounds and sealants in Industry 2891, Adhesives and Sealants; and artists paints in Industry 3952, Lead Pencils, Crayons, and Artists' Materials.

The total value of shipments for establishments classified in the Paints and Allied Products industry amounted to $6,630 million in 1977, an increase of 73 percent from 1972. The value of shipments of products classified as primary to the industry was $6,123 million, an increase of 74 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were architectural coatings, for which shipments increased 71 percent, and product finishes for original equipment manufacturers, for which shipments increased 86 percent. Value added by manufacture, at $2,821 million in 1977, was 57 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 61.4 thousand employees, a decrease of 7 percent from 1972. The leading States in employment were Illinois, California, Ohio, and New Jersey, accounting for approximately 45 percent of the industry's 1977 employment. These same States were in the forefront for 1972 when they accounted for approximately 45 percent of the industry's employment.

The establishments in this industry with less than 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 6 percent of total value of shipments.

Table 1a. Historical Statistics for the Industry: 1977 and Earlier Years

(For explanation of terms, see appendix A)

Year[1]	Companies[2] (no.)	All establishments: Total (no.)	All establishments: With 20 employees or more (no.)	All employees: Number (1,000)	All employees: Payroll (mil. dol.)	Production workers: Number (1,000)	Production workers: Hours (mil.)	Production workers: Wages (mil. dol.)	Value added by manufacture (mil. dol.)	Cost of materials (mil. dol.)	Value of shipments (mil. dol.)	Expenditures and assets: New capital expenditures (mil. dol.)	Expenditures and assets: Gross value of fixed assets (mil. dol.)	End-of-year inventories (mil. dol.)	Ratios: Specialization (percent)	Ratios: Coverage (percent)
	INDUSTRY 2851, PAINTS AND ALLIED PRODUCTS[3]															
1977 Census..	1 288	1 579	653	61.4	882.6	33.0	66.2	394.1	2 821.3	3 848.9	6 629.7	167.4	(NA)	937.6	96	97

1974 ASM.....	(NA)	(NA)	(NA)	64.9	741.9	35.0	69.5	337.1	2 227.6	2 890.5	5 007.0	119.1	1 085.0	841.2	(NA)	(NA)
1973 ASM.....	(NA)	(NA)	(NA)	69.3	718.4	39.1	75.4	329.0	1 959.8	2 330.4	4 268.3	72.5	1 019.2	624.9	(NA)	(NA)
1972 Census..	1 317	1 599	687	65.9	647.2	36.2	73.2	295.1	1 791.7	2 058.4	3 821.8	81.5	1 031.9	542.8	95	96

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. [r]Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4]Data for 1967 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5]Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus these estimates may be of limited reliability.

[6]Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[9]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[10]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 1b. **Selected Operating Ratios for the Industry: 1977 and Earlier Years**

(For explanation of terms, see appendix A)

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. Summary Statistics for the Industry: 1977

[For explanation of terms, see appendix A]

Item	Unit of measure	Paints and allied products (SIC 2851)
Primary product specialization ratio[1]	percent	96
Coverage ratio[2]	do	97
All establishments	number	1 579
With 1 to 19 employees	do	926
With 20 to 99 employees	do	508
With 100 employees or more	do	145
All employees, average for year	1,000	61.4
Payroll for year, all employees	mil. dol.	882.6
Production workers:		
Average for year	1,000	33.0
March	do	32.0
May	do	33.3
August	do	34.1
November	do	32.4
Hours	millions	66.2
January to March	do	15.7
April to June	do	17.0
July to September	do	17.2
October to December	do	16.3
Wages	mil. dol.	394.1
Cost of materials, etc.	do	3 848.9
Materials, parts, containers, etc., consumed	do	3 443.2
Resales	do	336.4
Fuels consumed	do	28.9
Purchased electric energy	do	31.3
Contract work	do	9.1
Value of shipments, including resales	do	6 629.7
Value of resales	do	436.2
Value added by manufacture	do	2 821.3
Manufacturers' inventories:		
Beginning of year	do	864.2
Finished products	do	474.8
Work in process	do	48.0
Materials, supplies, fuel, etc.	do	341.3
End of year	do	937.6
Finished products	do	513.8
Work in process	do	49.6
Materials, supplies, fuel, etc.	do	374.1
Capital expenditures for plant and equipment	do	178.2
New capital expenditures	do	167.4
New buildings and other structures	do	52.5
New machinery and equipment	do	114.9
Used capital expenditures	do	10.7

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977

(For explanation of terms, see appendix A. For description of annual survey of manufactures (ASM), see appendix B)

Item	Paints and allied products (SIC 2851)	
	Amount (million dollars)	Standard error of estimate[1] (percent)
Purchased services:		
Cost of purchased services for repair of--		
Buildings and other structures	7.0	6
Response coverage ratio[2] (percent)	50.0	(X)
Machinery	21.7	7
Response coverage ratio[2] (percent)	49.8	(X)
Cost of purchased communication services	15.8	8
Response coverage ratio[2] (percent)	48.5	(X)
Rental payments	34.9	6
Buildings and other structures	18.1	9
Machinery and equipment	16.9	6
Supplemental labor costs	159.0	1
Legal costs	65.3	2
Voluntary costs	93.7	2
Gross value of depreciable assets:		
Buildings and other structures:		
Beginning or year	516.6	3
New capital expenditures	50.0	4
Used capital expenditures	(6.1)	18
Retirements	22.9	6
End of year	549.9	3
Machinery and equipment:		
Beginning of year	717.0	2
New capital expenditures	129.6	6
Automobiles, trucks, etc., for highway use[3]	(4.8)	(A)
Computers and peripheral data processing equipment[3]	(3.5)	(A)
All other[3]	(87.5)	27
New machinery and equipment, n.s.k.[4]	(33.8)	40
Used capital expenditures	5.8	9
Retirements	34.6	3
End of year	817.9	2
Total gross value of depreciable assets:		
Beginning of year	1,233.7	2
New capital expenditures	179.6	4
Used capital expenditures	11.9	11
Retirements	57.4	4
End of year	1,367.8	2
Depreciation charges during 1977	129.4	3
Buildings and other structures	36.6	3
Machinery and equipment	92.8	3

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

[For explanation of terms, see appendix A]

Industry and employment size class	E[1]	All establishments (no.)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)	End-of-year inventories (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)					
INDUSTRY 2851, PAINTS AND ALLIED PRODUCTS												
Total	-	**1 579**	**61.4**	**882.6**	**33.0**	**66.2**	**394.1**	**2 821.3**	**3 848.9**	**6 629.7**	**167.4**	**937.6**
Establishments with an average of—												
1 to 4 employees	E7	408	0.7	10.1	0.5	0.8	4.5	27.3	40.9	69.1	(41.4)	9.5
5 to 9 employees	E6	247	1.7	23.4	0.9	1.9	10.5	61.8	96.9	157.9	(D)	21.2
10 to 19 employees	E1	271	3.9	53.3	2.1	4.2	22.8	140.5	212.3	350.3	(D)	47.8
20 to 49 employees	-	330	10.2	139.6	5.4	10.7	57.3	396.6	569.4	958.9	18.6	137.7
50 to 99 employees	-	178	12.4	171.9	6.5	12.9	72.3	514.4	739.8	1 250.1	18.6	185.3
100 to 249 employees	-	107	16.5	229.3	9.0	18.4	106.4	777.6	1 064.7	1 837.2	54.0	252.1
250 to 499 employees	-	29	9.8	154.5	5.5	11.0	73.6	582.0	729.0	1 300.1	22.7	171.5
500 to 999 employees	-	9	6.1	100.5	3.1	6.3	46.6	321.2	395.9	706.0	12.0	112.6
Covered by administrative records[2]	E0	516	2.0	26.9	1.1	2.1	11.7	68.2	99.2	167.4	3.2	23.6

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. Industry-Product Analysis — Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

1977 product code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B&C (percent)	Total made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)
		A	B	C	D	E	F	G	H	I
2851	Paints and allied products.....1977..	6,629.7	5,911.8	256.1	461.8	96	6,123.0	5,911.8	211.2	97
	1972..	3,821.8	3,392.6	174.9	254.3	95	3,520.2	3,392.6	127.6	96
	1967..	2,911.4	2,598.5	133.0	179.8	95	2,703.8	2,598.5	105.4	96

Table 5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

1977 product code	Product group, product class, and miscellaneous receipts	All industries	Paints and allied products (SIC 2851)	Other industries
	Total	(X)	6,629.7	(X)
	Primary products	(X)	5,911.8	(X)
	Secondary products	(X)	256.1	(X)

	Aerosol paints made from purchased paint:						
28519 43	Interior paints		13	(S)	84.7	(S)	64.5
28519 45	Exterior paints	Million gal...	16	6.7	38.8		
28519 51	Organosols and plastisols, other than coatings	.....	13	(X)	20.9		
28519 75	Paint and varnish driers	.....	4	(X)	9.8	(X)	23.3
28519 79	Miscellaneous related paint products, e.g., pigment dispersions, ink vehicles, bleached shellacs, etc	.....	70	(X)	195.8	(X)	169.0
28519 00	Miscellaneous paint products, n.s.k.	.....	(NA)	(X)	18.7	(X)	22.5
28510 00	Paints and allied products, n.s.k., typically for companies with 5 employees or more (see note)	.....	(NA)	(X)	363.7	(X)	268.0
28510 02	Paints and allied products, n.s.k., typically for companies with less than 5 employees (see note)	.....	(NA)	(X)	167.4	(X)	64.1

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00", or in some cases, to appropriate product group code (4 digits) followed by "0 00."

(NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable.

[1]Quantity and value reported by all producers of product, not just those with shipments of $100,000 or more.

[2]For some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated equals or exceeds 10 percent of published figure: * indicates 19 to 20 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[3]1977 and 1972 product detail have been aligned with new product class descriptions reported in Current Industrial Reports M-28F, Paint, Varnish, and Lacquer. 1977 product classes 28511, 28512, and 28513 are comparable with 1972 product classes 28511-28517, except for n.s.k. data (see footnotes 4, 7, and 8). For 1972 product class and product descriptions, see 1972 Census of Manufactures Volume II, Industry Statistics, part 2.

[4]Includes n.s.k. data for 1972 product classes 28511, 28512, 28513, 28514, and 28515.

[5]Data for these product codes were not collected for 1972, but were included in product codes 28511 57 and 28511 59.

[6]10 to 30 percent of quantity was estimated.

[7]Includes n.s.k. data for 1972 product classes 28516 and 28517.

[8]Total excludes n.s.k. data for 1972 (see footnotes 4 and 7).

Table 6b. Product Classes — Value of Shipments by All Producers by Geographic Area: 1977 and 1972

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

n.s.k. Not specified by kind.
[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.
[2]For 1967 and 1963, individual product codes included in this class differ significantly from posterior years. Products shifting into or out of this product class represent more than 15 percent of total value at 1972 U.S. levels.

Table 7. Materials Consumed by Kind: 1977 and 1972

(Includes quantity and cost of materials consumed or put into production by establishments classified only in this industry. For further explanation, see appendix A, Cost of materials)

1977 material code	Material	Unit of measure	1977		1972

5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977 14
6a. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1977 and 1972 16
6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972 20
6c. Product Classes—Value Shipped by All Producers: 1963, 1967, 1972 to 1977 22

MATERIAL AND SPECIAL STATISTICS

7. Materials Consumed by Kind: 1977 and 1972 23
8. Employees Engaged in Construction: 1977 27

DESCRIPTION OF INDUSTRIES

INDUSTRIAL ORGANIC CHEMICALS

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code	Title
2861	Gum and Wood Chemicals
2865	Cyclic Crudes and Intermediates
2869	Industrial Organic Chemicals, N.E.C.

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

Industries 2865, Cyclic Crudes and Intermediates, and 2869, Industrial Organic Chemicals, N.E.C., include establishments primarily engaged in the manufacture of basic industrial organic chemicals. The U.S. International Trade Commission (ITC) collects comparable data for these products on a much more detailed basis in the annual report, Synthetic Organic Chemicals: United States Production and Sales.

In order to avoid duplicating the reports furnished to the ITC for synthetic organic chemicals, establishments reporting these products to the ITC were requested to report dollar values by product classes to the Bureau of the Census, including the value of those synthetic organic chemicals shipped as interplant transfers. As indicated in table A below, the dollar values reported to the Census Bureau differ from those reported to the ITC.

In general, data reported to the Census Bureau are for the value of the product as shipped, whether it is a chemical compound or a finished product (preparation or mixture). Sales figures reported to the ITC represent the value of the organic chemical compound whether it is shipped as such or incorporated in another product. Also, reports to the Census Bureau are based on plant reports and the dollar shipment figures represent the valuation (f.o.b. plant) of all goods physically shipped from the producing site. Thus, the Census Bureau data include products shipped on consignment and interplant transfers (separate measures are shown in table 6A), while the ITC data represent sales on a company basis by primary producers only when accompanied by passage of title. Thus, the commercial shipment figures reported by the Census Bureau most nearly correspond to the information in the ITC report.

INDUSTRY 2861, GUM AND WOOD CHEMICALS

This industry comprises establishments primarily engaged in the manufacture of hardwood and softwood distillation products, wood and gum naval stores, charcoal, natural dye-stuffs, and natural tanning materials. Establishments primarily engaged in the manufacture of synthetic tanning materials are classified in industry 2869, synthetic dye in industry 2865, and synthetic organic chemicals in industries 2833, 2843, 2865, 2869, and 2873. For a detailed list of products of industry 2861 refer to table 6a, product codes 28611 13 to 28612 98.

The total value of shipments for establishments classified in the Gum and Wood Chemicals industry amounted to $391 million in 1977, an increase of 18 percent from 1972. The value of shipments of products classified as primary to the industry was $436 million, an increase of 45 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $185 million in 1977, was 19 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 4.8 thousand employees, a decrease of 19 percent from 1972. The leading States in employment were Georgia, Florida, and Missouri, accounting for approximately 50 percent of the industry's 1977 employment. Data for these States were withheld to avoid disclosing operations of individual companies.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative

records of other agencies or developed from industry averages. These establishments accounted for 4 percent of total value of shipments.

INDUSTRY 2865, CYCLIC CRUDES AND INTERMEDIATES

This industry comprises establishments primarily engaged in the manufacture of coal tar crudes, synthetic organic intermediates, dyes, color lakes and toners, and coal tar crudes. Important products of this industry include (1) derivatives of benzene, toluene, napthalene, anthracene, pyridine, carbazole, and other cyclic chemical products; (2) synthetic organic dyes; (3) synthetic organic pigments; and (4) cyclic (coal tar) crudes, such as light oils and light oil products, coal tar acids, and products of medium and heavy oil such as creosote oil, naphthalene, anthracene, and their higher homologues, and tar. Establishments primarily engaged in the manufacture of coal tar crudes in chemical recovery ovens are classified in industry 3312; and petroleum refineries, which produce such products, in industry 2911.

No attempt was made by the Bureau of the Census to secure commodity detail for intermediates, dyes, or lakes and toners, since this information is compiled and published by the U.S. International Trade Commission (ITC) in Synthetic Organic Chemicals, United States Production and Sales. Likewise, no attempt was made by the Census Bureau to secure commodity detail for the tar crudes manufactured by tar distillers since this information is also published in the ITC report.

Direct comparisons between the product-class data reported to the Census Bureau and the product information reported to the ITC should be used carefully, since the statistics published by the ITC do not show all products produced by tar distillers as distinguished from products produced by petroleum refineries or others. However, in order to provide the data user with as much information as possible, table A presents value of shipments (including interplant transfers) and commercial shipments as published by the Census Bureau, and value of sales as published by the ITC, for 1977 and 1972.

For the value of the product groupings comprising industry 2865, see table 6A, product codes 28651 11 to 28655 11.

The total value of shipments for establishments classified in the Cyclic Crudes and Intermediates industry amounted to $5,637 million in 1977, an increase of 175 percent from 1972. The value of shipments of products classified as primary to the industry was $5,514 million, an increase of 136 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were cyclic (coal tar) intermediates, for which shipments increased 166 percent. Value added by manufacture, at $2,214 million in 1977, was 138 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 35.7 thousand employees, an increase of 27 percent from 1972. The leading States in employment were New Jersey, West Virginia, New York, and

Table A. Shipments and Interplant Transfers of Synthetic Organic Chemicals: 1977 and 1972

1977 product code	Product class and product	Reported by Census Bureau				Reported by U.S. International Trade Commission: Sales[1] (mil. dol.)	
		Shipments, including interplant transfers (mil. dol.)		Commercial shipments only (mil. dol.)			
		1977	1972	1977	1972	1977	1972
28651 --	Cyclic intermediates	4,084.4	1,538.0	3,103.3	1,151.7	2,596.6	1,433.9
28652 --	Synthetic organic dyes	722.1	473.6	712.5	464.5	690.0	479.7

28694 --	Pesticides and other organic agricultural chemicals	1,474.0	489.3	1,268.5	434.1	2,808.3	1,091.7
28696 --	Miscellaneous end-use chemcials and chemical products, excluding urea	15,495.2	5,900.2	12,213.2	4,524.4	10,463.3	4,680.2
28697 --	Miscellaneous cyclic and acyclic chemicals and chemical products						

(D) Withheld to avoid disclosing operations of individual companies.
[1] U.S. International Trade Commission in annual reports, Synthetic Organic Chemicals, United States Production and Sales, for 1977 and 1972.
[2] For 1977, excludes $29.3 million in "Synthetic Organic Chemicals, n.e.c., n.s.k.;" for 1972, excludes $8.8 million.

Texas, accounting for approximately 55 percent of the industry's 1977 employment. Data for West Virginia have been withheld to avoid disclosing operations of individual companies.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 2869, INDUSTRIAL ORGANIC CHEMICALS, N.E.C.

This industry comprises establishments primarily engaged in the manufacture of industrial organic chemicals, not elsewhere classified. Important products of this industry include (1) noncyclic organic chemicals such as acetic, chloroacetic, adipic, formic, oxalic and tartaric acids and their metallic salts; chloral, formaldehyde, and methylamine; (2) solvents such as amyl, butyl, and ethyl alcohols; methanol; amyl, butyl and ethyl acetates; ethel ether, ethylene glycol ether and diethylene glycol ether; acetone, carbon disulfide and chlorinated solvents such as carbon tetrachloride, perchloroethylene and tricholoethylene; (3) polyhydric alcohols such as ethylene glycol, sorbitol, pentaerythritol, and synthetic glycerin; (4) synthetic perfume and flavoring materials such as coumarin, methyl salicylate, saccharin, citral, citronellal, synthetic geraniol, ionone, terpeineol, and synthetic vanillin; (5) rubber processing chemicals such as accelerators and antioxidants, both cyclic and acyclic; (6) placticizers, both cyclic and acyclic, such as esters of phosphoric acid, phthalic anhydride, adipic acid, lauric acid, oleic acid, sebacic acid, and stearic acid; (7) synthetic tanning agents such as naphthalene sulfonic acid condensate; (8) chemical warfare gases; and (9) esters, amines, etc., of polyhydric alcohols and fatty and other acids.

Establishments primarily engaged in the manufacture of plastics materials and nonvulcanizable elastomers are classified in industry 2821; synthetic rubber in industry 2822; essential oils in industry 2899; wood distillation products, naval stores, and natural dyeing and tanning materials in industry 2861; rayon and other synthetic fibers in industries 2823 and 2824; specialty cleaning, polishing, and sanitation preparations in industry 2842; paints in industry 2851; urea in industry 2873; organic pigments in industry 2865; and inorganic pigments in industry 2816. Distilleries engaged in the manufacture of grain alcohol for beverage purposes are classified in industry 2085.

No attempt was made by the Bureau of the Census to secure commodity detail for synthetic organic chemicals, since this information is compiled and published by the U.S. International Trade Commission (ITC) in Synthetic Organic Chemicals, United States Production and Sales. Direct comparisons between the product-class data reported to the Census Bureau and the product information reported to the ITC should be used carefully, since the statistics published by the ITC do not show all products produced by chemical plants as distinguished from products produced by petroleum refineries or others. However, in order to provide the data user with as much information as possible, table A presents value of shipments (including interplant transfers) and commercial shipments as published by the Census Bureau, and value of sales as published by the ITC, for 1977 and 1972. For the value of product groupings comprising industry 2869, see table 6a, product codes 28693 13 to 28697 13.

The total value of shipments for establishments classified in the Industrial Organic Chemicals, N.E.C. industry amounted to $24,233 million in 1977, an increase of 163 percent from 1972. The value of shipments of products classified as primary to the industry was $19,378 million, an increase of 158 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $10,476 million in 1977, was 100 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 112.3 thousand employees, an increase of 10 percent from 1972. The leading States in employment were Texas, Louisiana, West Virginia, and New Jersey, accounting for approximately 55 percent of the industry's 1977 employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for less than 1 percent of total value of shipments.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. r Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4]Data for 1967 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5]Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus these estimates may be of limited reliability.

[6]Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[9]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[10]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. Summary Statistics for the Industry: 1977

[For explanation of terms, see appendix A]

Item	Unit of measure	Gum and wood chemicals (SIC 2861)	Cyclic crudes and intermediates (SIC 2865)	Industrial organic chemicals, n.e.c. (SIC 2869)
Primary product specialization ratio[1]	percent	76	68	69
Coverage ratio[2]	do	67	67	84
All establishments	number	119	191	569
With 1 to 19 employees	do	82	64	223
With 20 to 99 employees	do	24	58	164
With 100 employees or more	do	13	69	182
All employees, average for year	1,000	4.8	35.7	112.3
Payroll for year, all employees	mil. dol.	54.0	631.5	2 108.7
Production workers:				
Average for year	1,000	3.8	23.4	70.7
March	do	3.6	23.5	69.7
May	do	3.9	23.7	70.2
August	do	3.9	23.3	71.5
November	do	3.7	23.1	71.1
Hours	millions	7.8	46.6	145.7
January to March	do	1.8	11.9	35.9
April to June	do	2.0	11.9	36.5
July to September	do	2.0	11.4	36.7
October to December	do	1.9	11.4	36.6
Wages	mil. dol.	38.9	369.8	1 216.5
Cost of materials, etc.	do	205.3	3 453.6	13 948.8
Materials, parts, containers, etc., consumed	do	179.6	2 925.0	11 405.5
Resales	do	1.6	113.6	420.5
Fuels consumed	do	18.9	271.8	1 393.9
Purchased electric energy	do	4.7	113.1	452.8
Contract work	do	0.5	30.1	276.0
Value of shipments, including resales	do	391.3	5 637.0	24 232.8
Value of resales	do	3.7	127.2	496.1
Value added by manufacture	do	185.0	2 214.4	10 475.7
Manufacturers' inventories:				
Beginning of year	do	63.6	784.2	2 591.5
Finished products	do	40.6	350.9	1 247.3
Work in process	do	2.3	165.7	474.7
Materials, supplies, fuel, etc.	do	20.7	267.7	869.4
End of year	do	65.7	844.4	2 942.7
Finished products	do	40.4	391.7	1 419.7
Work in process	do	1.6	155.8	494.1
Materials, supplies, fuel, etc.	do	23.8	296.9	1 028.9
Capital expenditures for plant and equipment	do	34.7	448.6	3 189.5
New capital expenditures	do	27.0	443.1	3 162.6
New buildings and other structures	do	10.8	52.6	447.7
New machinery and equipment	do	16.2	390.5	2 714.9
Used capital expenditures	do	7.7	5.5	26.9

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977

(For explanation of terms, see appendix A. For description of annual survey of manufactures (ASM), see appendix B)

Item	Gum and wood chemicals (SIC 2861)		Cyclic crudes and intermediates (SIC 2865)		Industrial organic chemicals, n.e.c. (SIC 2869)	
	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)
Purchased services:						
Cost of purchased services for repair of--						
Buildings and other structures	(1.0)	15	10.0	3	37.2	5
Response coverage ratio[2] (percent)	82	(X)	78	(X)	65	(X)
Machinery	(7.6)	27	49.4	4	321.7	1
Response coverage ratio[2] (percent)	98	(X)	87	(X)	66	(X)
Cost of purchased communication services	(0.5)	55	5.1	5	26.5	14
Response coverage ratio[2] (percent)	78	(X)	85	(X)	67	(X)
Rental payments	1.4	6	19.1	1	85.9	1
Buildings and other structures	(Z)	(A)	5.2	1	14.8	4
Machinery and equipment	1.3	6	13.9	1	71.2	1
Supplemental labor costs	10.7	2	141.3	1	471.8	1
Legal costs	4.2	2	47.0	1	132.1	1
Voluntary costs	6.5	3	94.3	1	339.7	1
Gross value of depreciable assets:						
Buildings and other structures:						
Beginning or year	28.2	5	593.0	2	2,173.0	1
New capital expenditures	10.2	6	53.0	5	442.0	1
Used capital expenditures	2.0	1	2.1	1	7.1	2
Retirements	-	(X)	22.5	6	36.4	1
End of year	40.4	5	625.6	2	2,585.7	1
Machinery and equipment:						
Beginning of year	146.9	4	3,289.0	1	14,308.0	1
New capital expenditures	14.4	1.0	388.0	1	2,413.6	1
Automobiles, trucks, etc., for highway use[3]	(0.2)	(A)	(1.4)	(A)	(5.9)	(A)
Computers and peripheral data processing equipment[3]	(0.1)	(A)	(0.5)	(A)	(4.5)	(A)
All other[3]	(12.3)	(A)	331.7	6	2,127.6	1
New machinery and equipment, n.s.k.[4]	(1.7)	(A)	(54.5)	37	275.6	7
Used capital expenditures	6.2	6	3.4	11	19.1	1
Retirements	(0.7)	28	128.0	1	312.9	1
End of year	166.8	4	3,552.4	1	16,427.7	1
Total gross value of depreciable assets:						
Beginning of year	175.1	4	3,882.0	1	16,481.0	1
New capital expenditures	24.6	8	441.0	1	2,855.6	1
Used capital expenditures	8.2	4	5.5	7	26.2	1
Retirements	(0.7)	29	150.5	1	349.3	1
End of year	207.2	4	4,177.9	1	19,013.4	.1
Depreciation charges during 1977	11.5	4	276.7	1	1,174.5	1
Buildings and other structures	1.8	3	31.9	5	139.1	1
Machinery and equipment	9.7	4	244.8	1	1,035.4	1

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

[For explanation of terms, see appendix A]

Industry and employment size class	E[1]	All establishments (no.)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)	End-of-year inventories (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. Industry-Product Analysis—Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

1977 product code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. Table 5c. Industry-Product Analysis — Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

28695 37	Reagent and high purity grades of organic chemicals refined from purchased technical grades		(X)	(X)	(X)	23.0	22.0	1.0
	Natural organic chemicals, n.e.c.:							
28695 53	Derivatives of fatty substances, including salts, alcohols and esters, except plasticizers and surface active agents		(X)	(X)	(X)	60.4	(D)	(D)
28695 55	Other natural organic chemicals, n.e.c.		(X)	(X)	(X)	78.8	(D)	(D)
28695 98	Other industrial organic chemicals, n.e.c.		(X)					
28695 00	Ethyl alcohol and other industrial organic chemicals, n.e.c., n.s.k.		(X)	(X)	(X)	5.6	(X)	(X)
28690 00	Industrial organic chemicals, n.e.c., n.s.k., typically for establishments with 5 employees or more (see note)		(X)	(X)	(X)	r102.6	(X)	(X)
28690 02	Industrial organic chemicals, n.e.c., n.s.k., typically for establishments with less than 5 employees (see note)		(X)	(X)	(X)	14.7	(X)	(X)

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00" or, in some cases to appropriate product group code (4 digits) followed by "0 00."

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. r Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable.

[1]Quantity and value reported by all producers of product, not just those with shipments of $100,000 or more.

[2]For some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[3]Excludes sulfate wood turpentine.

[4]Excludes pinene reported as such.

[5]Excludes synthetic acetic acid and synthetic methanol, which data are included in product code 28697 13.

[6]For 1972, product code 28612 98 was not collected; quantity and value are implicitly included in product codes 28612 91, 28612 94, and 28612 96.

[7]Data for refined tall oil fatty acids containing 90 percent free fatty acids or more, excluding resin acids, are reported in Industry 2899, Chemical Preparation, N.E.C.

[8]Additional product detail for many synthetic organic chemicals in this industry is shown in U.S. International Trade Commission's Annual Report, Synthetic Organic Chemcials: U.S. Production and Sales.

Footnotes continued on next page.

[9] Includes products grouped by U.S. International Trade Commission in annual report, Synthetic Organic Chemicals: U.S. Production and Sales, Section III, Cyclic Intermediates. Also included are cumene, cyclohexane, ethybenzene, stryene, m-xylene, o-xylene and p-xylene, as grouped in Section II, Primary Products from Petroleum and Natural Gas for Chemical Conversion.

[10] Represents value of shipments reported by tar distillers, but excludes shipment values for tar, tar crudes, and tar pitches reported by establishments classified in Industry 3312, Blast Furnaces and Steel Mills, and Industry 2911, Petroleum Refining.

[11] For additional quantity information, see U.S. Treasury Department, Internal Revenue Service publication, Alcohol and Tobacco, for 1977 and 1972.

[12] Excludes shipments reported as rubbing alcohol (primary to Industry 2834, Pharmaceutical Preparations) and as antifreeze (primary to Industry 2899, Chemical Preparations, N.E.C.).

[13] 1977 product codes 28696 11 and 28697 13 were formed from a regrouping of 1972 product codes 28691 11 and 28692 13; former two and latter two codes are comparable in total only. Change was made to maintain comparability with sections of U.S. International Trade Commission Report, Synthetic Organic Chemicals: U.S. Production and Sales, which were similarly revised in 1976. See sections XIV and XV of 1976 report for a discussion of this change.

Table 6b. Product Classes — Value of Shipments by All Producers by Geographic Area: 1977 and 1972

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. [r] Revised.

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

[2]Industry 2869, prior to 1972, includes values for urea. Due to revisions to Standard Industrial Classification product classes, urea became product code 28732 15 in 1972.

[3]Withheld because estimated figure is negative. This is consequence of using difference method of estimation (see Estimating Procedure in appendix B) and of improved establishment reporting that resulted in changing classification of shipments from n.s.k. code for 1972 Census to specified 5-digit product classes for this year. Four-digit total is best estimate, even though smaller than sum of 5-digit values.

Table 7. Materials Consumed by Kind: 1977 and 1972

(Includes quantity and cost of materials consumed or put into production by establishments classified only in this industry. For further explanation, see appendix A, Cost of materials)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable.

[1]For some establishments, data have been estimated from central unit values, which are based on quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[2]Detailed materials consumed data was not collected for 1972.

[3]Total cost of materials of establishments that did not report detailed materials data, including establishments that were not mailed a form.

[4]For 1972, material codes 281946, 287410, 281996, 281301, 286519, 286501, 286502, 286509, 291167, 282104, 265001, and 340001 were included with material code 970099.

[5]For industry 2869, supplemental data for code 970099 are presented in 1977 Census of Manufactures subject series report, Selected Materials Consumed.

[6]From 1972 Census of Manufactures Supplemental Inquiry: Consumption of Materials, Parts, Containers, and Supplies During 1972 (Form MA-131).

[7]For 1972, material codes 286501, 286502, 286509, 286553, 291167, and 333348 were included with material code 970099.

[8]For 1972, liquefied refinery gases used for raw material or chemical foodstock were collected as follows:

1972 material code	Material	Basis	Unit of measure	Total consumption of materials (quantity)	Consumption of materials received from other establishments: Quantity	Consumption of materials received from other establishments: Delivered cost (million dollars)	Materials made and consumed in same plant (quantity)
	Liquefied petroleum and refinery gases for chemical feedstock:

Table 8. **Employees Engaged in Construction: 1977**

Industry	Total		Establishments reporting construction employees				Response coverage ratio C/A
			Total		Engaged in construction		
	Employees (1,000)	Payroll (millions)	Employees (1,000)	Payroll (millions)	Employees (1,000)	Payroll (millions)	
	A	B	C	D	E	F	G
2865, Cyclic crudes and intermediates.....	35.7	631.5	2.0	25.0	.1	1.2	.06
2869, Industrial organic chemicals, n.e.c.....	112.3	2,108.7	9.8	203.0	.5	10.0	.09

Note: Establishments in selected industries were instructed to report number of employees, included in total employment, that were engaged in construction of major additions to the plant and utilized as a separate work force. Workers engaged in regular maintenance and repair operations were not included. Coverage Ratio (column G) indicates proportion of industry employment represented by establishments that reported construction employees. Coverage Ratio excludes: (a) construction workers not employed by the establishment (e.g., working under contract or provided by another establishment of the company); (b) establishments that reported having no construction employees; (c) establishments that did not respond to the inquiry, and (d) establishments that were not mailed a form, or from which a form had not been received at the time data were tabulated.

6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972 21
6c. Product Classes—Value Shipped by All Producers: 1963, 1967, 1972 to 1977. 22

MATERIAL STATISTICS

7. Materials Consumed by Kind: 1977 and 1972. 23

DESCRIPTION OF INDUSTRIES

AGRICULTURAL CHEMICALS

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code	Title
2873	Nitrogenous Fertilizers
2874	Phosphatic Fertilizers
2875	Fertilizers, Mixing Only
2879	Agricultural Chemicals, N.E.C.

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

INDUSTRY 2873, NITROGENOUS FERTILIZERS

This industry comprises establishments primarily engaged in the manufacture of nitrogenous fertilizer materials or mixed fertilizers from nitrogenous materials produced in the same establishment. Included are ammonia fertilizer compounds and anhydrous ammonia, nitric acid, ammonium nitrate, ammonium sulfate and nitrogen solutions, urea, and natural organic fertilizers (except compost) and mixtures. Establishments primarily engaged in the manufacture of industrial inorganic chemicals, n.e.c., are classified in industry 2819 and industrial organic chemicals, n.e.c., in industry 2869.

The total value of shipments for establishments classified in the Nitrogenous Fertilizers industry amounted to $2,603 million in 1977, an increase of 222 percent from 1972. The value of shipments of products classified as primary to the industry was $2,857 million, an increase of 205 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $1,205 million in 1977, was 169 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 12.1 thousand employees, an increase of 29 percent from 1972. The leading States in employment were Louisiana, California, Ohio, and Mississippi, accounting for approximately 35 percent of the industry's 1977 employment. Data for Mississippi have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

The 1977 census obtained data on shipments of synthetic ammonia, nitric acid, and ammonium compounds only at the product class level. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of these products are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-28A, Inorganic Chemicals. Some of these data are also shown in table 6a.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 2874, PHOSPHATIC FERTILIZERS

This industry comprises establishments primarily engaged in the manufacture of phosphatic fertilizer materials or mixed fertilizers from phosphatic materials produced in the same establishment. Included are phosphoric acid; normal, enriched, and concentrated superphosphates; ammonium phosphates; nitrophosphates; and calcium metaphosphates. Establishments primarily engaged in the manufacture of industrial inorganic chemicals, n.e.c., are classified in industry 2819.

The total value of shipments for establishments classified in the Phosphatic Fertilizers industry amounted to $2,862 million in 1977, an increase of 127 percent from 1972. The value of shipments of products classified as primary to the industry was $2,553 million, an increase of 143 percent from 1972. (See the Introduction for a discussion of the difference

between value of shipments for the industry and value of product shipments.) The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $818 million in 1977, was 92 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 14.4 thousand employees, a decrease of 3 percent from 1972. The leading States in employment were Florida, Idaho, Louisiana, and Texas, accounting for approximately 65 percent of the industry's 1977 employment. Data for Idaho have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

The 1977 census obtained data on shipments of phosphoric acid only at the product class level. This is the source of the data in table 6a described "As reported in census of manufactures." Detailed figures on the shipments of phosphoric acid are reported annually in the Census Bureau's Current Industrial Reports (CIR) MA-28A, Inorganic Chemicals. Some of these data are also shown in table 6a.

No establishments in this industry were excluded from the mail portion of the census. The data for a small number of establishments whose reports were not received at the time the data were tabulated were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for less than 1 percent of total value of shipments.

INDUSTRY 2875, FERTILIZERS, MIXING ONLY

This industry comprises establishments primarily engaged in mixing fertilizers from purchased fertilizer materials.

The total value of shipments for establishments classified in the Fertilizers, Mixing Only industry amounted to $1,867 million in 1977, an increase of 133 percent from 1972. The value of shipments of products classified as primary to the industry was $1,481 million, an increase of 127 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $489 million in 1977, was 85 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 12.4 thousand employees, an increase of 9 percent from 1972. The leading States in employment were Ohio, Florida, North Carolina, and Pennsylvania, accounting for approximately 35 percent of the industry's 1977 employment. This represents a shift from 1972 when Florida, Ohio, North Carolina, and Illinois accounted for approximately 35 percent of the industry's employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 5 percent of total value of shipments.

INDUSTRY 2879, AGRICULTURAL CHEMICALS, N.E.C.

This industry comprises establishments primarily engaged in the formulation and preparation of ready-to-use agricultural and household pest-control chemicals, including insecticides, fungicides, and herbicides from technical chemicals or concentrates; and the production of concentrates which require further processing before use as agricultural pesticides. This industry also includes establishments primarily engaged in manufacturing or formulating agricultural chemicals, not elsewhere classified, such as minor or trace elements and soil conditioners. Establishments primarily engaged in the manufacture of basic or technical agricultural pest-control chemicals including insecticides, fungicides, and herbicides such as lead and calcium arsenates and copper sulfate are classified in industry group 281; DDT, BHC, 2,4-D carbamates, etc., in industry group 286; and agricultural lime products in major group 32.

The total value of shipments for establishments classified in the Agricultural Chemicals, N.E.C. industry amounted to $2,780 million in 1977, an increase of 142 percent from 1972. The value of shipments of products classified as primary to the industry was $2,704 million, an increase of 126 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were herbicidal preparations, for which shipments increased 172 percent. Value added by manufacture, at $1,299 million in 1977, was 117 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 15.0 thousand employees, an increase of 23 percent from 1972. The leading States in employment were Texas, Missouri, Alabama, and California, accounting for approximately 50 percent of the industry's 1977 employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 4 percent of total value of shipments.

Table 1a. Historical Statisitcs for the Industry: 1977 and Earlier Years

(For explanation of terms, see appendix A)

Year[1]	Companies[2] (no.)	All establishments: Total (no.)	All establishments: With 20 employees or more (no.)	All employees: Number (1,000)	All employees: Payroll (mil. dol.) - Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. N.E.C. Not elsewhere classified. [r]Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimated based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4]Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus, these estimates may be of limited reliability.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

(For explanation of terms, see appendix A)

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. Summary Statistics for the Industry: 1977

[For explanation of terms, see appendix A]

Item	Unit of measure	Nitrogenous fertilizers (SIC 2873)	Phosphatic fertilizers (SIC 2874)	Fertilizers, mixing only (SIC 2875)	Agricultural chemicals, n.e.c. (SIC 2879)
Primary product specialization ratio[1]	percent	84	93	95	83
Coverage ratio[2]	do	72	91	98	77
All establishments	number	152	91	673	409
With 1 to 19 employees	do	64	22	469	288
With 20 to 99 employees	do	46	34	195	93
With 100 employees or more	do	42	35	9	28
All employees, average for year	1,000	12.1	14.4	12.4	15.0
Payroll for year, all employees	mil. dol.	207.9	212.8	139.1	224.1
Production workers:					
Average for year	1,000	7.9	10.1	8.1	9.3
March	do	7.9	10.5	9.3	9.4
May	do	7.9	10.4	9.1	9.6
August	do	7.8	9.7	6.8	8.7
November	do	7.8	9.7	7.1	9.2
Hours	millions	17.1	21.7	16.0	17.9
January to March	do	4.1	5.5	4.4	4.5
April to June	do	4.4	5.6	4.7	4.7
July to September	do	4.3	5.3	3.4	4.3
October to December	do	4.3	5.3	3.6	4.4
Wages	mil. dol.	128.4	139.2	68.9	118.2
Cost of materials, etc.	do	1 447.3	1 917.6	1 373.0	1 496.2
Materials, parts, containers, etc., consumed	do	893.5	1 611.0	1 070.8	1 210.6
Resales	do	109.2	160.7	281.2	191.9
Fuels consumed	do	313.7	60.0	8.6	44.6
Purchased electric energy	do	102.6	77.2	8.0	20.9
Contract work	do	28.4	8.7	4.3	28.2
Value of shipments, including resales	do	2 603.4	2 681.7	1 866.6	2 780.4
Value of resales	do	139.9	180.0	333.2	270.8
Value added by manufacture	do	1 204.7	817.7	488.9	1 299.3
Manufacturers' inventories:					
Beginning of year	do	296.9	353.9	303.3	440.2
Finished products	do	170.9	200.4	189.8	223.4
Work in process	do	12.2	18.0	21.6	52.3
Materials, supplies, fuel, etc.	do	113.8	135.5	92.0	164.6
End of year	do	378.0	419.7	306.5	460.6
Finished products	do	218.5	252.5	186.3	228.3
Work in process	do	13.3	19.4	20.4	62.5
Materials, supplies, fuel, etc.	do	146.2	147.8	99.8	169.9
Capital expenditures for plant and equipment	do	782.5	113.4	43.6	220.9
New capital expenditures	do	734.4	111.8	41.9	219.2
New buildings and other structures	do	34.7	13.8	9.3	41.1
New machinery and equipment	do	699.6	97.9	32.6	178.0
Used capital expenditures	do	48.1	1.6	1.6	1.7

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977

(For explanation of terms, see appendix A. For description of annual survey of manufactures (ASM), see appendix B)

Item	Nitrogenous fertilizers (SIC 2873)		Phosphatic fertilizers (SIC 2874)		Fertilizers, mixed only (SIC 2875)		Agricultural chemicals, n.e.c. (SIC 2879)	
	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)
Purchased services:								
Cost of purchased services for repair of--								
Buildings and other structures	3.3	8	4.4	3	3.5	9	4.2	5
Response coverage ratio[2] (percent)	66	(X)	65	(X)	63	(X)	78	(X)
Machinery	49.6	1	38.6	2	10.3	14	11.2	6

Retirements	31.1	2	20.0	2	27.6	5	18.3	7
End of year	3,030.5	1	1,562.0	1	251.6	6	957.2	2
Total gross value of depreciable assets:								
Beginning of year	2,519.8	1	1,713.8	1	377.9	4	1,022.1	1
New capital expenditures	796.1	2	111.8	3	(42.6)	16	219.3	4
Used capital expenditures	48.2	1	1.7	7	(4.1)	39	1.2	4
Retirements	48.3	9	21.9	2	37.4	5	21.3	9
End of year	3,315.8	1	1,805.3	1	387.2	4	1,221.3	1
Depreciation charges during 1977	168.1	1	122.7	1	30.6	9	82.6	2
Buildings and other structures	13.9	12	12.8	1	9.3	12	11.4	2
Machinery and equipment	154.1	2	109.9	1	21.3	11	71.2	3

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditure, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

[For explanation of terms, see appendix A]

Industry and employment size class	E[1]	All establishments (no.)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)	End-of-year inventories (million dollars)

Covered by administrative records[2]	E0	152	0.5	6.9	0.3	0.5	3.5	33.9	30.0	63.9	4.0	9.2

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. Industry-Product Analysis—Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

1977 product code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. Table 5c. Industry-Product Analysis — Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

Footnotes are on next page.

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in the code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00" or, in some cases, to appropriate product group code (4 digits) followed by "0 00."

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable.

[1]For 1977, quantity and value reported by all producers of product, not just those with shipments of $100,000 or more.

[2]For some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[3]1972 data include all revised figures published in CIR.

[4]Includes unspecified amounts of nitric acid produced but not withdrawn from the system.

[5]Excludes data for by-product ammonia liquor and ammonium sulfate published by U.S. Bureau of Mines. 1977 by-product quantities are not available; 1972 quantity of ammonia was 13,000 short tons and quantity of ammonium sulfate 561,000 short tons.

[6]Represents total amount of original solution produced, including amounts used for fertilizer, explosives, and other uses, and amounts consumed in manufacturing other products such as nitrogen solutions (code 28731 55).

[7]Excludes amounts converted to solid ammonium nitrate.

[8]For quantity of production and quantity and value of sales of urea produced for use in feed compounds, liquid fertilizers, solid fertilizers and plastics, see U.S. International Trade Commission annual report, Synthetic Organic Chemicals: U.S. Production and Sales, for 1977 and 1972.

[9]For 1972, product codes 28731 41 and 28731 59 were included with product code 28731 59.

[10]Data on quantity of production, shipments, plant consumption, and stocks are published in Current Industrial Reports M28B, Inorganic Fertilizer Materials and Related Products.

[11]For 1977, product detail has been substantially revised to reflect current technology and requirements for data. 1972 data are not comparable and so are presented on 1972 basis.

[12]1977 product code.

[13]1972 product code.

[14]For 1977, product detail for industry 2879 was revised to reflect industry technology and demands for data. Comparability between 1977 and 1972 product codes is as follows:

1972 to 1977				1977 to 1972			
Product code		Product code		Product code		Product code

[15]For 1977, product code 28796 31 was included with product code 28796 79 to avoid disclosing figures of individual companies.

[16]For 1977, product codes 28791 00 and 28793 00 were included with product code 28790 00.

Table 6b. Product Classes — Value of Shipments by All Producers by Geographic Area: 1977 and 1972

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

Product class and geographic area	Value of product shipments	
	1977	1972
28731, SYNTHETIC AMMONIA, NITRIC ACID, AND AMMONIUM COMPOUNDS		
United States	2,300.8	766.2

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards.

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

[2]Withheld because estimated figure is negative. This is consequence of using difference method of estimation (see Estimating Procedures in appendix B) and of improved establishment reporting that resulted in changing classification of shipments from n.s.k. code for 1972 Census to specified 5-digit product classes for this year. Four-digit total is best estimate, even though smaller than sum of 5-digit values.

Table 7. Materials Consumed by Kind: 1977 and 1972

(Includes quantity and cost of materials consumed or put into production by establishments classified only in this industry. For further explanation, see appendix A, Cost of materials)

1977 material code	Material	Basis	Unit of measure	Total consumption of materials	Consumption of materials received from other establishments: Quantity[1]	Consumption of materials received from other establishments: Delivered cost (million dollars)	Materials made and consumed in same plant

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable.

[1]For some establishments, data have been estimated from central unit values, which are based on the quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[2]Total cost of materials of establishments that did not report detailed materials data, including establishments what were not mailed a form.

[3]For 1972, material code 131152 was included with material code 970099.

[4]For 1972, sodium nitrate was published separately, with quantity of 14.8 thousand short tons and value of $.8 million.

[5]For 1972, material codes 281933 and 147701 were included with material code 970099.

[6]For 1977, material code 147501 was combined with material code 970099 to avoid disclosing operations of individual companies.

[7]For 1972, detailed materials data are not available.

Miscellaneous Chemical Products

Description of Industries 2

TABLES

INDUSTRY STATISTICS

1a. Historical Statistics: 1977 and Earlier Years 5
1b. Selected Operating Ratios: 1977 and Earlier Years 7
1c. Historical Statistics for Industry 2892, Explosives: 1977 and 1972 8
2. Geographic Area: 1977 and 1972 9
3a. Summary Statistics: 1977 11
3b. Supplemental Statistics Based on Sample Estimates: 1977 12
4. Employment Size of Establishment: 1977 13
5a. Industry and Primary Product Class Specialization: 1977 14

PRODUCT STATISTICS

5b. Industry-Product Analysis—Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967 15
5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977 16
6a. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1977 and 1972 18
6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972 . . . 23
6c. Product Classes—Value Shipped by All Producers: 1963, 1967, 1972 to 1977 25

MATERIAL STATISTICS

7. Materials Consumed by Kind: 1977 and 1972 26

DESCRIPTION OF INDUSTRIES

MISCELLANEOUS CHEMICAL PRODUCTS

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title	
2891	Adhesives and Sealants
2892	Explosives
2893	Printing Ink
2895	Carbon Black
2899	Chemical Preparations, N.E.C.

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

INDUSTRY 2891, ADHESIVES AND SEALANTS

This industry comprises establishments primarily engaged in the manufacture of industrial and household adhesives, glues, caulking compounds, sealants, and cements produced from vegetable, animal, and synthetic materials. Establishments primarily engaged in the manufacture of plastics and resin materials, including resins for protective coatings, are classified in Industry 2821, Plastics and Resin Materials. Establishments primarily engaged in the manufacture of putties, wood fillers, and sealers are classified in Industry 2851, Paint and Allied Products.

The total value of shipments for establishments classified in the Adhesives and Sealants industry amounted to $1,808 million in 1977, an increase of 95 percent from 1972. The value of shipments of products classified as primary to the industry was $1,873 million, an increase of 96 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $748 million in 1977, was 75 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 16.6 thousand employees, an increase of 11 percent from 1972. The leading States in employment were Ohio, California, Illinois, and New Jersey, accounting for approximately 45 percent of the industry's 1977 employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 5 percent of total value of shipments.

INDUSTRY 2892, EXPLOSIVES

This industry comprises establishments primarily engaged in the manufacture of high explosives, blasting accessories, and related products. Establishments primarily engaged in the manufacture of ammunition are classified in Industries 3482, Small Arms Ammunition and 3483, Ammunition, Except for Small Arms, N.E.C. Establishments primarily engaged in the manufacture of fireworks are classified in Industry 2899, Chemicals and Chemical Preparations, N.E.C.

Statistics for the Explosives industry include selected data reported by government-owned, contractor-operated (GOCO) establishments. Data for all materials consumed except fuels and electric energy, as well as data for fixed assets, capital expenditures, and inventories, are excluded from this report for the GOCO plants; value of shipments and value added by manufacture have been estimated from averages reported for commercial establishments in prior years. These establishments represent 34 percent of the industry employment in 1977, compared with 58 percent in 1972.

The total value of shipments for establishments classified in the Explosives industry amounted to $666 million in 1977, an increase of 65 percent from 1972. The value of shipments of products classified as primary to the industry was $436 million, an increase of 83 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The change reflected a general trend in the shipments of most of the prod-

ucts of the industry. Value added by manufacture, at 411 million in 1977, was 46 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 12.3 thousand employees, a decrease of 34 percent from 1972. The leading States in employment were Virginia, Tennessee, Pennsylvania, and New Jersey, accounting for approximately 55 percent of the industry's 1977 employment. Data for Virginia, Tennessee, and New Jersey have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 2893, PRINTING INK

This industry comprises establishments primarily engaged in the manufacture of lithographic, letterpress, gravure, flexographic, screen process, and similar printing inks. Establishments primarily engaged in the manufacture of writing, stamp pad, and related inks, and household tints and dyes are classified in Industry 2899, Miscellaneous Chemical Preparations, N.E.C.

The total value of shipments for establishments classified in the Printing Ink industry amounted to $945 million in 1977, an increase of 86 percent from 1972. The value of shipments of products classified as primary to the industry was $904 million, an increase of 82 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were flexographic inks, for which shipments increased 114 percent, and lithographic and offset inks for which shipments increased 100 percent. Shipments of flexographic inks also increased as a percent of total value of product shipments, from 15 percent in 1972 to 17 percent in 1977. This reflects the growing demand for flexible packaging products. In addition lithographic inks increased as a percent of total product shipments, from 30 percent in 1972 to 34 percent in 1977, reflecting the continuing shift from the letterpress to the lithographic printing process. Value added by manufacture, at 368 million in 1977, was 59 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 10.1 thousand employees, an increase of 5 percent from 1972. The leading States in employment were Illinois, New Jersey, California, and Ohio, accounting for approximately 55 percent of the industry's 1977 employment. Data for New Jersey have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 10 percent of total value of shipments.

INDUSTRY 2895, CARBON BLACK

This industry comprises establishments primarily engaged in the manufacture of carbon black by the furnace and channel processes. Establishments primarily engaged in the manufacture of lamp black and bone black are classified in Industry 2816, Inorganic Pigments.

Consumption of feedstocks by carbon black manufactures shifted substantially between 1972 and 1977. Natural gas as a raw material declined 43 percent from the 1972 level to 25.2 billion cubic feet in 1977, while fuel oil (including both fuel oil and other liquid hydrocarbons used as carbon black feedstocks) increased 13 percent to 15.6 million barrels in 1977. This reflects the sixfold increase in the unit cost of natural gas, compared with a threefold increase in the unit cost of fuel oil.

The total value of shipments for establishments classified in the Carbon Black industry amounted to $468 million in 1977, an increase 106 percent from 1972. The value of shipments of products classified as primary to the industry was $466 million, an increase of 105 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) Value added by manufacture, at $170 million in 1977, was 24 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 2.5 thousand employees, a decrease of 14 percent from 1972. The leading States in employment were Louisiana and Texas, accounting for approximately 80 percent of the industry's 1977 employment.

No establishments in this industry were excluded from the mail portion of the census. There were no establishments for which administrative records were used.

INDUSTRY 2899, CHEMICAL PREPARATIONS, N.E.C.

This industry comprises establishments primarily engaged in the manufacture of miscellaneous chemical preparations, not elsewhere classified, such as salt evaporated from seawater or brine, fatty acids, essential oils, gelatin (except vegetable), sizes, bluing, laundry sours, writing and stamp pad inks; and industrial compounds, such as boiler and heat insulating compounds, metal, oil and water treating compounds, waterproofing compounds, and chemical supplies for foundries. Establishments primarily engaged in the manufacture of vegetable gelatin (agar-agar) are classified in industry 2833, and dessert prepara-

tions based on gelatin in industry 2099. Establishments primarily engaged in mining, crushing, and screening rock salt are classified in industry 1476, and establishments primarily engaged in extracting brine in industry 1479.

The total value of shipments for establishments classified in the Chemical Preparations, N.E.C. industry amounted to $3,951 million in 1977, an increase of 79 percent from 1972. The value of shipments of products classified as primary to the industry was $4,244 million, an increase of 90 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were fatty acids (produced for sale as such), for which shipments increased 127 percent, and evaporated salt, for which shipments increased 84 percent. Value added by manufacture, at $1,842 million in 1977, was 64 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 35.3 thousand employees, a decrease of 5 percent from 1972. The leading States in employment were Ohio, New Jersey, Texas, and Illinois, accounting for approximately 40 percent of the industry's 1977 employment. Data for Illinois have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 5 percent of total value of shipments.

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. r Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4]Data for 1967 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5]Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus these estimates may be of limited reliability.

[6]Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[9]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[10]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

(NA) Not available. (S) Withheld because estimate did not meet publication standards.

[1]Explosives (total) includes, in addition to privately-owned establishments, government-owned, contractor-operated plants. See industry 2892, privately owned and operated establishments, below.

[2]Data include value added for government-owned, contractor-operated plants which was estimated based upon averages reported for commercial establishments in prior years.

[3]Data exclude government-owned materials furnished to government-owned, contractor-operated plants and include fuel and electricity purchased by or for these establishments.

[4]Data include a calculated value of shipments for government-owned, contractor-operated plants comprised of adjusted value added (estimated as described in footnote 2) plus the cost of fuels and electric energy.

[5]Total excludes expenditures, inventories, and fixed assets of government-owned, contractor-operated plants.

[6]Includes expenditures for plants under construction but not in operation.

[7]Government-owned, privately-operated establishments did not enter into calculation of "primary product specialization ratio" or "coverage ratio," as all dollar receipts for these establishments were included in "miscellaneous receipts."

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. Summary Statistics for the Industry: 1977

[For explanation of terms, see appendix A]

Item	Unit of measure	Adhesives and sealants (SIC 2891)	Explosives (SIC 2892)	Printing ink (SIC 2893)	Carbon black (SIC 2895)	Chemical preparations, n.e.c. (SIC 2899)

New machinery and equipment	do	29.5	18.8	12.8	21.2	132.9
Used capital expenditures	do	2.2	0.7	1.3	-	5.2

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977

(For explanation of terms, see appendix A. For description of annual survey of manufactures (ASM), see appendix B)

Item	Adhesives and sealants (SIC 2891)		Explosives (SIC 2892)		Printing ink (SIC 2893)		Carbon black (SIC 2895)		Chemical preparations, n.e.c. (SIC 2899)	
	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)
Purchased services:										
Cost of purchased services for repair of--										
Buildings and other structures	(1.8)	23	(1.3)	51	(3.0)	(A)	1.6	1	5.5	7

Retirements	14.6	7	9.1	5	14.3	1	2.2	1	24.5	4
End of year	403.2	4	183.5	3	173.5	4	328.9	1	1,300.5	2
Depreciation charges during 1977	29.9	3	13.8	8	10.2	4	16.6	1	(85.3)	21
Buildings and other structures	7.2	4	5.1	8	2.5	7	2.5	1	15.0	4
Machinery and equipment	22.7	4	8.7	8	7.7	5	14.0	1	(70.3)	25

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

[For explanation of terms, see appendix A]

Industry and employment size class	E[1]	All establishments (no.) - Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. **Industry-Product Analysis — Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967**

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

1977 product code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B&C (percent)	Total made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified.

[1]Government-owned, privately-operated establishments did not enter into calculation of "primary product specialization ratio" or "coverage ratio," as all dollar receipts for these establishments were included in "miscellaneous receipts."

[2]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

Table 5c. Industry-Product Analysis — Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

Table 5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977—Con.

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

See footnotes at end of table.

Table 6a. Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972 — Con.

(Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation, see appendix A, Value of shipments)

1977 product code	Product	Unit of measure	1977				1972		
			Number of companies with shipments of $100,000 or more	Quantity of production for all purposes[2]	Product shipments[1]		Quantity of production for all purposes	Product shipments	
					Quantity[2]	Value (million dollars)		Quantity	Value (million dollars)
	CHEMICAL PREPARATIONS, N.E.C.--Con.								
	Essential oils, fireworks and pyrotechnics, sizes, and chemical preparations, n.e.c.--Con.								
	Chemical preparations, n.e.c.--Con.								
	Sizes:								
28995 63	Rosin sizes	Million lb.	6	488.3	511.8	113.3	766.9	741.6	96.1
28995 65	Dextrin sizes		2						
28995 67	Other sizes	Million lb.	2						
28995 72	Inks (writing and stamp pad ink, including indelible ink and marking fluid, but excluding drawing inks)	Million gal.	21	(S)	(S)	16.1	(S)	(S)	17.4
	Water-treating compounds:								
28995 73	Swimming pool chemical preparations		20	(X)	(X)	77.1	(X)	(X)	14.3
28995 77	Boiler compounds	Million lb.	38	362.2	360.5	218.0	(X)	311.1	109.6
28995 79	Other water softening compounds	Million lb.	28	349.1	352.2	200.9	(S)	228.7	73.4
28995 81	Waterproofing compounds (electrical, leather, masonry, textile, etc.)		24	(X)	(X)	68.9	(X)	(S)	44.4
28995 83	Embalming chemicals	Million lb.	8	(S)	(S)	8.7	(X)	(X)	3.8
28995 87	Vitreous enamel (frit)		9	207.8	206.1	67.2	235.9	230.6	45.6
28995 91	Plating compounds	Million lb.	21	(S)	(S)	219.8	(S)	(S)	101.5
28995 93	Lighter fluids (cigarette, charcoal, etc.)	Gallons	9	(S)	(S)	26.4	(S)	(S)	25.4
28995 95	Waxes (animal, vegetable, mineral, and synthetic, including blends), excluding pure petroleum waxes		13	(X)	(X)	27.4	(X)	(X)	10.5
28995 98	Other industrial chemical specialties, including fluxes and plastic wood preparations.		161	(X)	(X)	682.2	(X)	(X) [12] [14]404.7	
28995 00	Essential oils, fireworks and pyrotechnics, sizes, and chemical preparations, n.e.c., n.s.k.		(NA)	(X)	(X)	147.8	(X)	(X)	74.1
28990 00	Chemical preparations, n.e.c., n.s.k., typically for establishments with 5 employees or more (see note)		(NA)	(X)	(X)	239.9	(X)	(X)	132.5
28990 02	Chemical preparations, n.e.c., n.s.k., typically for establishments with less than 5 employees (see note)		(NA)	(X)	(X)	120.2	(X)	(X)	97.3

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00" or, in some cases, to appropriate product group code (4 digits) followed by "0 00."

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable.

[1] Quantity and value reported by all producers of product, not just those with shipments of $100,000 or more.

[2] For some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[3] For 1972, product code 28913 00 was included with product code 28914 00 and, thus, is not included in product class 28913 total.

[4] For 1972, product code 28915 00 was included with product code 28518 00 of Industry 2851, Paints and Allied Products, and, thus, is not included in product class 28915 total.

[5] Value of product shipments includes only shipments from privately owned and operated plants; value of shipments from government-owned, contractor-operated plants is included in value of shipments figure in table 1 as miscellaneous receipts.

[6] For 1972, product code 28921 13 was included with 28921 27.

[7] No carbon black produced or shipped by establishments classified in other industries.

[8] For more detail, see "Carbon Black, 1977," published by Energy Information Administration, U.S. Department of Energy.

[9] Data include between 50 and 100 thousand short tons of evaporated salt valued at less than $10 million and shipped by establishments classified in mineral industries. For annual information on evaporated salt, rock salt, and salt in brine, see U.S. Bureau of Mines "Minerals Yearbook".

[10] For 1977, product code 28994 51 was combined with product code 28994 98 to avoid disclosing operations of individual companies.

[11] For 1977, product code 28995 12 was combined with product code 28995 18 to avoid disclosing operations of individual companies.

[12] For 1972, product code 28995 31 was included with product code 28995 98.

[13] Excludes unspecified amount of permanent-type antifreeze preparations classified in product code 28697 13, Miscellaneous Cyclic and Acyclic Chemicals.

[14] For 1972, product code 28995 53 was combined with product code 28995 98.

Table 6b. **Product Classes — Value of Shipments by All Producers by Geographic Area: 1977 and 1972**

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

28991	Salt	246.2	207.8	183.9	160.4	151.3	133.9	111.6	98.4
28992	Fatty acids	353.2	277.4	232.9	338.7	229.4	155.3	111.1	88.1
28994	Gelatin, except ready-to-eat desserts	175.3	147.3	144.3	148.8	75.5	68.2	66.2	55.4
28995	Essential oils, fireworks, sizes, and other chemical preparations, n.e.c.	3,109.0	2,760.2	2,339.2	2,132.6	1,758.5	1,641.0	[4]1,146.1	[4] [5]841.0
28990	Chemical preparations, n.e.c., n.s.k.	360.1	(78.0)	(61.8)	(171.8)	216.6	229.8	124.6	41.2

- Represents zero. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards.

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

[2]Product group revised in 1972. 1967 data revised to agree with change; 1963 not revised. For 1967, products shifting into or out of product class represent approximately 14 percent of total shipments at U.S. level.

[3]Withheld because estimated figure is negative. This is consequence of using difference method of estimation (see Estimating Procedures in appendix B) and of improved establishment reporting that resulted in changing classification of shipments from n.s.k. code for 1972 Census to specified 5-digit product classes for this year. Four-digit total is best estimate, even though smaller than sum of 5-digit values.

[4]For 1967 and 1963, total shipments did not include values for product code 28995 83, Embalming Chemicals, which was part of product code 39943 98.

[5]For 1963, totals excluded values for sizes, product codes 28995 63 and 28995 65.

Table 7. Materials Consumed by Kind: 1977 and 1972

(Includes quantity and cost of materials consumed or put into production by establishments classified only in this industry. For further explanation, see appendix A, Cost of materials)

1977 material code	Material	Unit of measure	1977 Quantity[1]	1977 Delivered cost (million dollars)	1972 Quantity	1972 Delivered cost[2] (million dollars)

	(Data not collected)[8]					

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. N.E.C. Not elsewhere classified.
n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable.

[1]For some establishments, data have been estimated from central unit values, which are based on quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[2]From 1972 Census of Manufactures Supplemental Inquiry: Consumption of Materials, Parts, Containers, and Supplies During 1972 (Form MA-131).

[3]Total includes a minimal proportion (2-3 percent) of synthetic resins, n.s.k.

[4]Total cost of materials of establishments that did not report detailed materials data, including establishments that were not mailed a form.

[5]Total cost of materials purchased and consumed by privately owned and operated plants only; excludes data on materials purchased and consumed by government-owned, contractor-operated plants.

[6]For 1972, these materials codes were included with material code 970099.

[7]In addition to residual and distillate fuel oil, includes other liquid hydrocarbons used as carbon black feed stocks.

[8]Supplemental data for industry 2899 are presented in the 1977 Census of Manufactures subject series report, "Selected Materials Consumed."

Description of Industries 2

TABLES

INDUSTRY STATISTICS

1a. Historical Statistics: 1977 and Earlier Years 5
1b. Selected Operating Ratios: 1977 and Earlier Years 7
2. Geographic Area: 1977 and 1972 9
3a. Summary Statistics: 1977 12
3b. Supplemental Statistics Based on Sample Estimates: 1977 13
4. Employment Size of Establishment: 1977 14
5a. Industry and Primary Product Class Specialization: 1977 15

PRODUCT STATISTICS

5b. Industry-Product Analysis—Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967 16
5c. Industry-Product Analysis—Shipments by Product Class and Industry: 1977 17
6a. Products and Product Classes—Quantity and Value of Shipments by All Producers: 1977 and 1972 19
6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972 23
6c. Product Classes—Value Shipped by All Producers: 1963, 1967, 1972 to 1977 25

MATERIAL AND SPECIAL STATISTICS

7a. Materials Consumed by Kind: 1977 and 1972 26
7b. Fuels Produced and Consumed by Industry 2911, Petroleum Refining: 1958 Through 1977 28
8. Employees Engaged in Construction: 1977 28

DESCRIPTION OF INDUSTRIES

PETROLEUM AND COAL PRODUCTS

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code	Title
2911	Petroleum Refining
2951	Paving Mixtures and Blocks
2952	Asphalt Felts and Coatings
2992	Lubricating Oils and Greases
2999	Petroleum and Coal Products, N.E.C.

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

INDUSTRY 2911, PETROLEUM REFINING

This industry comprises establishments primarily engaged in the manufacture of gasoline, kerosene, distillate and residual fuel oils, lubricants, and other products from crude petroleum and its fractionation products through straight distillation of crude oil, redistillation of unfinished petroleum derivatives, and cracking or other processes. Establishments primarily engaged in producing natural gasoline from natural gas are classified in mining industries. Establishments primarily engaged in the manufacture of lubricating oils and greases by blending and compounding purchased materials and those primarily re-refining used lubricating oils are included in industry 2992.

Lubricating oils, lubricating oil base stocks, and lubricating greases are not only produced by petroleum refineries, but are also produced from purchased materials by plants blending and compounding lubricants, and are classified in Industry 2992, Lubricating Oils and Greases. Plants classified in industries 2911 and 2992 shipped substantially all of the lubricating oils and greases, valued at $3,233 million, with industry 2911 accounting for 53 percent.

Oils are frequently transferred from one refinery to another for further processing and blending. This introduces some duplication in the value of products shipped by the Petroleum Refining industry, as shown in tables 1, 2, 3, 4, and 5. To eliminate duplication in the statistics for individual products, figures were collected on the amount of oil received by refineries during the year. Net (unduplicated) shipments were calculated for the United States, as a whole, by subtracting "receipts" from the quantity shipped (see table 6a). These net shipments represent the quantity of petroleum products made available for consumption by the Petroleum Refining and Lubricating Oils and Greases industries.

Industry 2911 also includes establishments primarily engaged in the production of petroleum-based chemicals (petrochemicals). Detailed product statistics for liquefied refinery gases used as chemical raw material were not collected since these data are reported to the U.S. International Trade Commission and published in the report, Synthetic Organic Chemicals, United States Production and Sales.

Unlike most manufacturing industries where the receipts for contract work are reported as such, plants in industry 2911 processing oil on a contract basis for other companies were requested to report the commercial cost of all materials received and the market values, f.o.b. plant, for the products shipped.

Petroleum product statistics shown in this report are not directly comparable with the Bureau of Mines figures published in the Minerals Yearbook. The census of manufactures collects data on shipments, whereas the Bureau of Mines figures are in terms of "output" (production).

Data showing net shipments of gas liquids and related products covered in the 1977 Economic Censuses appear in the reports for the 1977 Census of Mineral Industries. Table 7a contains data showing the consumption of selected materials. Other data relating to "inputs" of materials appear as "receipts" in table 6a.

The total value of shipments for establishments classified in the Petroleum Refining industry amounted to $91,689 million in 1977, an increase of 254 percent from 1972. The value of shipments of petroleum products shipped by establishments classified in the Petroleum Refining industry was $88,590 million, an increase of 249 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were gasoline, for which shipments increased 221 percent, and light fuel oil, for which shipments increased 290 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added, by manufacture,

at $14,424 million in 1977, was 214 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 102.5 thousand employees, an increase of 2 percent from 1972. The leading States in employment were Texas, California, Louisiana, and Pennsylvania, accounting for approximately 63 percent of the industry's 1977 employment. These same States were in the forefront for 1972 when they accounted for approximately 60 percent of the industry's employment.

The cost of materials for the Petroleum Refining industry reflects the adjustment to the cost of crude petroleum imposed through the entitlements program (administered by the Economic Regulatory Administration, U.S. Department of Energy). This adjustment was included directly in the reported cost of domestic and foreign crude petroleum by most establishments. The adjustment amounts to a cash transfer from refiners to refiners, and therefore cancels out when the data are aggregated. However, distortions may exist in the regional statistics and in the separate cost figures (quantities are not affected) for domestic and foreign crude petroleum consumed, reported in tables 3a and 7a.

No establishments in this industry were excluded from the mail portion of the census. The data for a small number of establishments whose reports were not received at the time the data were tabulated were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for less than 1 percent of total value of shipments.

INDUSTRY 2951, PAVING MIXTURES AND BLOCKS

This industry comprises establishments primarily engaged in the manufacture of asphalt and tar paving mixtures; and paving blocks made of asphalt, creosoted wood, and various compositions of asphalt or tar with other materials. Establishments primarily engaged in the manufacture of brick, concrete, granite, and stone paving blocks are classified in major group 32. For a detailed list of products of industry 2951, refer to table 6a, product codes 29510 11 to 29510 98.

The total value of shipments for establishments classified in the Paving Mixtures and Blocks industry amounted to $1,578 million in 1977, an increase of 71 percent from 1972. The value of shipments of products classified as primary to the industry was $1,519 million, an increase of 70 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $508 million in 1977, was 26 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 12.9 thousand employees, a decrease of 7 percent from 1972. The leading States in employment were New York, Ohio, Pennsylvania, and California, accounting for approximately 35 percent of the industry's 1977 employment. Data for New York have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 6 percent of total value of shipments.

INDUSTRY 2952, ASPHALT FELTS AND COATINGS

This industry comprises establishments primarily engaged in the manufacture of asphalt and other saturated felts in roll or shingle form, either smooth or faced with grit; and roofing cements and coatings. Establishments primarily engaged in the manufacture of paint are classified in industry 2851, and linoleum and tile cement in industry 2891. For a detailed list of products of industry 2952, refer to table 6a, product codes 29521 11 to 29523 98.

The total value of shipments for establishments classified in the Asphalt Felts and Coatings industry amounted to $2,078 million in 1977, an increase of 106 percent from 1972. The value of shipments of products classified as primary to the industry was $1,829 million, an increase of 103 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $764 million in 1977, was 72 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 19.5 thousand employees, an increase of 25 percent from 1972. The leading States in employment were Ohio, Illinois, Texas, and California, accounting for approximately 45 percent of the industry's 1977 employment. These same States were in the forefront for 1972 when they accounted for approximately 47 percent of the industry's employment, although there has been some shift in the relative importance of individual States.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 2 percent of total value of shipments.

INDUSTRY 2992, LUBRICATING OILS AND GREASES

This industry comprises establishments primarily engaged in blending, compounding, and re-refining lubricating oils and

greases from purchased mineral, animal, and vegetable materials. Lubricating oils, lubricating oil base stocks, and lubricating greases produced by petroleum refineries are classified in industry 2911. Plants classified in industries 2911 and 2992 shipped substantially all of the lubricating oils and greases, valued at $3,233 million, with industry 2992 accounting for 44 percent.

The total value of shipments for establishments classified in the Lubricating Oils and Greases industry amounted to $1,645 million in 1977, an increase of 134 percent from 1972. The value of shipments of petroleum products shipped by establishments not classified as in the Petroleum Refining industry was $1,514 million, an increase of 185 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) Value added by manufacture, at $525 million in 1977, was 77 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 10.3 thousand employees, an increase of 27 percent from 1972. The leading States in employment were Pennsylvania, California, Illinois, and Ohio, accounting for approximately 50 percent of the industry's 1977 employment. Data for Pennsylvania and California have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 4 percent of total value of shipments.

INDUSTRY 2999, PETROLEUM AND COAL PRODUCTS, N.E.C.

This industry comprises establishments primarily engaged in the manufacture of fuel briquettes, boulets, packaged fuel, powdered fuel, and other products of petroleum and coal, not elsewhere classified.

The total value of shipments for establishments classified in the Petroleum and Coal Products, N.E.C. industry amounted to $463 million in 1977, an increase of 237 percent from 1972. The value of shipments of products classified as primary to the industry was $495 million, an increase of 255 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) Value added by manufacture, at $157 million in 1977, was 179 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 1.6 thousand employees, an increase of 45 percent from 1972. The leading States in employment were California, Illinois, Ohio, and Texas, accounting for approximately 60 percent of the industry's 1977 employment. Data for Ohio and Texas have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

The figures for fuel briquettes and packaged fuel appearing in this report exclude the quantities and amounts shipped by establishments producing wood charcoal briquettes (industry 2861) as well as establishments classified in nonmanufacturing industries. They therefore differ from the figures published by the Bureau of Mines, U.S. Department of Interior, in the Minerals Yearbook which include data for nonmanufacturing establishments, such as retail or wholesale coal yards, and public utilities which produce some fuel briquettes as a secondary activity. The census figures for fuel briquettes also include information for briquettes made from charcoal and sawdust (data which are omitted by the Bureau of Mines).

Establishments of single-unit companies in this industry with up to 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 6 percent of total value of shipments.

Table 1a. Historical Statistics for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year[1]	Companies[2] (no.)	All establishments: Total (no.)	All establishments: With 20 employees or more (no.) - Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. r Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4]Data for 1967 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5]Data either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data; thus these estimates may be of limited reliability.

[6]Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[9]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[10]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

[For explanation of terms, see appendix A]

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. **Summary Statistics for the Industry: 1977**

[For explanation of terms, see appendix A]

Item	Unit of measure	Petroleum refining (SIC 2911)	Paving mixtures and blocks (SIC 2951)	Asphalt felts and coatings (SIC 2952)	Lubricating oils and greases (SIC 2992)	Petroleum and coal products, n.e.c. (SIC 2999)
Primary product specialization ratio[1]	percent	99	95	91	94	97
Coverage ratio[2]	do	97	93	97	44	87
All establishments	number	349	1 023	275	490	70
With 1 to 19 employees	do	70	858	111	347	47
With 20 to 99 employees	do	97	152	99	128	20
With 100 employees or more	do	182	13	65	15	3
All employees, average for year	1,000	102.5	12.9	19.5	10.3	1.6
Payroll for year, all employees	mil. dol.	2 055.3	190.6	271.7	157.1	22.5
Production workers:						
Average for year	1,000	70.8	9.7	14.3	5.4	1.1
March	do	69.4	6.5	13.2	5.1	1.1
May	do	71.2	10.3	14.3	5.3	1.1

Materials, supplies, fuel, etc.	do	1 079.0	29.9	61.2	82.4	41.5
End of year	do	5 196.2	62.8	157.2	180.8	59.3
Finished products	do	2 600.1	23.3	81.3	80.3	11.1
Work in process	do	1 382.1	2.0	7.4	11.3	0.3
Materials, supplies, fuel, etc.	do	1 213.9	37.4	68.5	89.1	47.9
Capital expenditures for plant and equipment	do	2 184.9	66.5	56.0	27.0	15.5
New capital expenditures	do	2 108.6	57.3	55.2	25.6	14.5
New buildings and other structures	do	589.2	8.4	13.0	5.7	1.5
New machinery and equipment	do	1 519.5	48.9	42.2	19.9	13.0
Used capital expenditures	do	76.3	9.2	0.8	1.4	0.9

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.

[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.

[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977

(For explanation of terms, see appendix A. For description of annual survey of manufactures (ASM), see appendix B)

Item	Petroleum refining (SIC 2911)		Paving mixtures and blocks (SIC 2951)		Asphalt felts and coatings (SIC 2952)		Lubricating oils and greases (SIC 2992)		Petroleum and coal products, n.e.c. (SIC 2999)	
	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)	Amount (million dollars)	Standard error of estimate[1] (percent)
Purchased services:										
Cost of purchased services for repair of--

All other[3]	1,215.9	2	(30.3)	(66)	(38.0)	(53)	(13.5)	(A)	(11.1)	(A)
New machinery and equipment, n.s.k.[4]	280.7	7	(10.4)	(A)	(5.6)	(A)	(3.7)	(A)	(1.8)	(A)
Used capital expenditures	50.4	2	(7.0)	21	(0.7)	59	0.3	8	0.7	11
Retirements	149.6	1	13.2	13	9.7	3	(11.3)	38	0.7	5
End of year	14,614.4	1	529.0	2	373.6	4	205.2	5	138.2	8
Total gross value of depreciable assets:										
Beginning of year	22,162.6	1	599.5	2	465.6	3	304.9	5	144.8	7
New capital expenditures	2,100.0	1	(54.7)	1.8	57.1	4	24.3	9	14.6	9
Used capital expenditures	76.3	1	(8.0)	21	(8.9)	95	(4.8)	73	0.7	11
Retirements	262.5	1	(18.2)	15	12.3	7	(15.3)	28	1.1	7
End of year	24,076.4	1	644.1	2	519.3	3	318.7	6	159.0	7
Depreciation charges during 1977	956.5	1	48.3	2	36.5	5	18.4	13	8.5	9
Buildings and other structures	378.6	1	5.5	14	5.8	5	4.4	8	0.6	13
Machinery and equipment	577.9	1	42.8	2	30.7	6	(14.0)	16	7.8	9

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operation of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

Table 4. Industry Statistics by Employment Size of Establishment: 1977

[For explanation of terms, see appendix A]

Industry and employment size class	E[1]	All establishments (no.)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)	End-of-year inventories (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. Industry-Product Analysis — Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

1977 product code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B&C (percent)	Total made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)

n.e.c. Not elsewhere classified.

[1]Includes lubricating oils and greases which are also primary to Industry 2992, Lubricating Oils and Greases.

[2]1977 coverage ratio computed on basis of including both industries to which lubricating oils and greases are primary would total 97 percent: 53 percent by industry 2911 and 44 percent by industry 2992. Remaining 3 percent was shipped by establishments in other industries. Computed on basis of excluding industry 2911, 1977 ratio for industry 2992 is 94 percent.

[3]Included in figures for this industry are lubricating oils and greases which are also primary to Industry 2911, Petroleum Refining.

Table 5c. Industry-Product Analysis — Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

Table 6a. **Products and Product Classes — Quantity and Value of Shipments by All Producers: 1977 and 1972** – Con.

(Includes quantity and value of products of this industry produced by (1) establishments classified in this industry (primary) and (2) establishments classified in other industries (secondary). Transfers of the products of this industry from one establishment of a company to another establishment of the same company (interplant transfers) are also included. For further explanation, see appendix A, Value of shipments)

1977 product code	Product	Unit of measure	1977			1972	
			Number of companies with shipments of $100,000 or more	Product shipments[1]		Product shipments	
				Quantity	Value (million dollars)	Quantity	Value (million dollars)
	PETROLEUM AND COAL PRODUCTS, N.E.C.						
2999- --	Total	.....	(NA)	(X)	494.6	(X)	139.2
29990 --	Petroleum and coal products, n.e.c:						
29990 15	Packaged fuel and fuel briquettes, except wood charcoal briquettes	S. tons.....	4	104.3	16.8	(S)	9.9
29990 91	Calcined petroleum coke	S. tons.....	14	4,498.7	381.8	(X)	120.0
29990 98	Other petroleum and coal products	.....	28	(X)	42.0		
29990 00	Petroleum and coal products, n.e.c., n.s.k., typically for establishments with 10 employees or more (see note)	.....	(NA)	(X)	42.1	(X)	8.1
29990 02	Petroleum and coal products, n.e.c., n.s.k., typically for establishments with less than 10 employees (see note)	.....	(NA)	(X)	12.0	(X)	1.2

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00" or, in some cases, to appropriate product group code (4 digits) followed by "0 00."

- Represents zero. (NA) Not available. N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable.

[1]Quantity and value reported by all producers of product, not just those with shipments of $100,000 or more.

[2]Reporting companies were requested to report quantities of refined petroleum products received in refineries for further processing and to classify items in the same manner as they were billed by shipper, regardless of how refinery (or blending and compounding establishment) would otherwise classify them.

[3]For some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[4]Represents difference between total shipments (quantity) and receipts (quantity).

[5]Includes all finished gasolines, finished base stocks, and blending agents such as alkylate, polymers (dimer, codimer, etc.), hydropolymers (hydrodimer, hydrocodimer, etc.), cumene, isopetane, isohexane, neohexane, iso-octane, motor benzol (benzene), and other blending agents derived from petroleum. Excludes natural gasoline derived from natural gas.

[6]Detailed statistics for liquefied refinery gases used as chemical raw material are published by U.S. International Trade Commission in "Synthetic Organic Chemicals, U.S. Production and Sales."

[7]Although respondents were requested to report receipts in same manner as billed by shipper, data indicate that items billed as other oils by shipper were sometimes reported as unfinished oils or lubricating oil petroleum base stocks by refinery (or blending and compounding plant) receiving these oils.

[8]Includes such products as cracking stock, unfinished gasoline requiring further distillation, naphtha stocks, slops, wax distillate, and other unfinished petroleum oils. Excludes lubricating oil base stocks, natural gasoline, and cycle condensates.

[9]Net shipments were negative; see footnotes 2, 4, and 7.

[10]Includes light, medium, heavy neutral, and residual stocks.

[11]Includes asphalt and fluxes for paving, roofing, waterproofing, briquetting, mastic, pipe coating, and molding composition; cutback asphalt, emulsified asphalt, and fluxes produced in petroleum refineries; and other asphaltic products, except road oil and fuel oil for heating purposes.

[12]Represents residual asphaltic oil used for surface treatment of roads and highways.

[13]Includes petroleum ether, rubber solvent, mineral spirits (petroleum spirits), varnish makers' and painters' naphtha, high-solvency naphtha, benzol diluent, lacquer diluent, cleaners' naphtha, Stoddard solvent, extraction solvents, and other petroleum distillates shipped as solvents.

[14]Represents amorphous paraffin of melting point not under 145°.

[15]Includes oils for lubricating purposes and such nonlubrication purposes as transformer oil, hydraulic oil, processing oil, quenching oil, and liquid rust preventative.

[16]Includes greases for aviation, automotive, industrial, and railroad uses; launching grease, cutting, drawing, and grinding compounds and paste. Also includes paste rust-preventative compounds and thread compounds.

Table 6b. Product Classes — Value of Shipments by All Producers by Geographic Area: 1977 and 1972

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

29521	Asphalt and tar saturated felts and boards, nonbuilding	99.5	(51.0)	(37.2)	29.4	40.6	34.2	27.5	21.1
29522	Roofing asphalts, pitches, coatings, and cements	263.4	289.1	268.1	258.8	182.6	155.3	101.4	94.4
29523	Prepared asphalt and tar roofing and siding products	1,405.3	1,327.9	1,139.6	1,052.0	828.4	690.6	375.2	338.6
29520	Asphalt felts and coatings, n.s.k	60.5	(31.7)	(18.0)	(17.8)	(6.9)	22.1	15.3	5.4
29920	Lubricating oils and greases, not made in refinery	1,514.4	1,216.5	1,059.0	1,005.3	718.3	642.0	443.4	425.6
29990	Petroleum and coal products, n.e.c	494.6	350.6	253.4	204.1	156.7	139.2	79.6	69.3

n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

Table 7a. Materials Consumed by Kind: 1977 and 1972

(Includes quantity and cost of materials consumed or put into production by establishments classified only in this industry. For further explanation, see appendix A, Cost of materials)

1977 material code	Material	Unit of measure	1977 Quantity[1]	1977 Delivered cost (million dollars)	1972 Quantity	1972 Delivered cost (million dollars)
	INDUSTRY 2911, PETROLEUM REFINING					
	Materials, containers, and supplies		(X)	72,062.0	(X)	19,610.8
	Crude petroleum, including field condensate	Million bbl.	5,108.5	60,121.4	4,269.6	15,557.8
131111	Domestic		2,798.5	30,387.8	3,419.9	12,445.9
131112	Foreign		2,310.0	29,733.6	849.7	3,111.9

970099	All other materials and components, parts, containers, and supplies		(X)	139.5	(X)	53.6
971000	Materials, containers, and supplies, n.s.k.[3]		(X)	169.8	(X)	60.8
	INDUSTRY 2999, PETROLEUM AND COAL PRODUCTS, N.E.C.					
	(Data were not collected)					

N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or less than half the unit of measure specified.

[1]For some establishments, data have been estimated from central unit values, which are based on quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[2]For 1972, natural gas liquids were collected in the following format:

a. Natural gasoline, mixed and crude, including drip gasoline: Quantity was 99.2 million bbl, delivered cost was $337.4 million.

b. Liquefied petroleum gases from natural gas, including feedstocks: Quantity was 226.7 million bbl, delivered cost was $653.8 million.

[3]Total cost of materials of establishments that did not report detailed materials data, including establishments that were not mailed a form.

Table 7b. Fuels Produced and Consumed by Industry 2911, Petroleum Refining: 1958 Through 1977

1977 material code	Fuel		Unit of measure	Quantity	Sales value, f.o.b. plant[1] (million dollars)
291104	Still gas	1977	Mil. cu. ft.	840,559	1,802.5
		1972		(NA)	(NA)
		1967		(NA)	(NA)
		1963		754,154	199.4
		1958	Mil. cu. ft.	671,699	205.8
291151	Residual fuels, including acid sludge	1977	1,000 bbl.	48,042	515.5
		1972		(NA)	(NA)
		1967		(NA)	(NA)
		1963		42,278	75.4
		1958		43,147	95.8
960015	All other fuels (gasoline, distillate oils, liquefied refinery gases, etc.)	1977		73,490	1,303.1
		1972		(NA)	(NA)
		1967		(NA)	(NA)
		1963		30,640	39.7
		1958	1,000 bbl.	17,415	25.0

(NA) Not available.
[1]Manufacturers were instructed to estimate sales value, f.o.b. plant, for fuels produced and consumed in same establishment.

Table 8. Employees Engaged in Construction: 1977

Industry	Total		Establishments reporting construction employees				Response coverage ratio C/A
			Total		Engaged in construction		
	Employees (1,000)	Payroll (millions)	Employees (1,000)	Payroll (millions)	Employees (1,000)	Payroll (millions)	
	A	B	C	D	E	F	G
2911, Petroleum refining	102.5	2,055.3	24.7	514.7	.9	15.8	.24

Note: Establishments in selected industries were instructed to report number of employees, included in total employment, that were engaged in construction of major additions to the plant and utilized as a separate work force. Workers engaged in regular maintenance and repair operations were not included. Coverage Ratio (column G) indicates proportion of industry employment represented by establishments that reported construction employees. Coverage Ratio excludes: (a) construction workers not employed by the establishment (e.g., working under contract or provided by another establishment of the company); (b) establishments that reported having no construction employees; (c) establishments that did not respond to the inquiry, and (d) establishments that were not mailed a form, or from which a form had not been received at the time data were tabulated.

6b. Product Classes—Value of Shipments by All Producers by Geographic Area: 1977 and 1972 31
6c. Product Classes—Value Shipped by All Producers: 1963, 1967, 1972 to 1977. 37

MATERIAL STATISTICS

7. Materials Consumed by Kind: 1977 and 1972. 38

DESCRIPTION OF INDUSTRIES

RUBBER AND MISCELLANEOUS PLASTICS PRODUCTS

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries

SIC Code	Title
3011	Tires and Inner Tubes
3021	Rubber and Plastics Footwear
3031	Reclaimed Rubber
3041	Rubber and Plastics Hose and Belting
3069	Fabricated Rubber Products, N.E.C.
3079	Miscellaneous Plastics Products

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

INDUSTRY 3011, TIRES AND INNER TUBES

This industry comprises establishments primarily engaged in the manufacture of pneumatic casings, inner tubes, and solid and cushion tires for all types of vehicles, airplanes, farm equipment, and children's vehicles; tiring; and camelback and tire repair and retreading materials. Establishments primarily engaged in retreading tires are classified in service industry 7534, Tire Retreading and Repair Shops.

The total value of shipments for establishments classified in the Tires and Inner Tubes industry amounted to $8,971 million in 1977, an increase of 56 percent from 1972. The value of shipments of products classified as primary to the industry was $8,128 million, an increase of 68 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were passenger car tires for which shipments increased 60 percent, and truck and bus tires, for which shipments increased 78 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $4,347 million in 1977, was 42 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 114.0 thousand employees, an increase of 6 percent from 1972. The leading States in employment were Ohio, Alabama, Tennessee, and Pennsylvania, accounting for 41 percent of the industry's 1977 employment.

Establishments of single-unit companies in this industry with up to 20 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 3021, RUBBER AND PLASTICS FOOTWEAR

This industry comprises establishments primarily engaged in the manufacture of all rubber and plastics footwear, waterproof fabric upper footwear, and other fabric upper footwear having rubber or plastic soles vulcanized to the uppers. Establishments primarily engaged in manufacturing rubber, composition, and fiber heels, soles, soling strips, and related shoemaking and repairing materials are classified in industry 3069; and plastic soles and soling strips in industry 3079.

The total value of shipments for establishments classified in the Rubber and Plastics Footwear industry amounted to $517 million in 1977, decrease of 16 percent from 1972. The value of shipments of products classified as primary to the industry was $405 million, decrease of 18 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) Value added by manufacture, at $272 million in 1977, was 26 percent below value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 19.8 thousand employees, a decrease of 60 percent from 1972. The leading States in employment were Connecticut, Georgia, Florida, and Maryland, accounting for approximately 45 percent of the industry's 1977 employment. Data for these States have been withheld to avoid

disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

Establishments of single-unit companies in this industry with up to 20 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 3031, RECLAIMED RUBBER

This industry comprises establishments primarily engaged in reclaiming rubber from scrap rubber tires, tubes, and miscellaneous waste rubber articles by processes which result in devulcanized, depolymerized, or regenerated replasticized products containing added ingredients. These products are sold for use as a raw material in the manufacture of rubber goods with or without admixture with crude rubber or synthetic rubber. Establishments primarily engaged in the assembly and wholesale sale of scrap rubber are classified in trade industries.

The total value of shipments for establishments classified in the Reclaimed Rubber industry amounted to $43 million in 1977, an increade of 44 percent from 1972. The value of shipments of products classified as primary to the industry was $62 million, an increase of 18 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) Value added by manufacture, at $25 million in 1977, was 62 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 0.9 thousand employees, the same as in 1972.

Establishments of single-unit companies in this industry with up to 20 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 5 percent of total value of shipments.

INDUSTRY 3041, RUBBER AND PLASTICS HOSE AND BELTING

This industry comprises establishments primarily engaged in the manufacture of rubber and plastics hose and belting, including garden hose. Establishments primarily engaged in the manufacture of rubber tubing are classified in industry 3069, plastic tubing in industry 3079, and flexible metallic hose in industry 3599, Machinery, Except Electrical, N.E.C.

The total value of shipments for establishments classified in the Rubber and Plastics Hose and Belting industry amounted to $1,766 million in 1977, an increase of 73 percent from 1972. The value of shipments of products classified as primary to the industry was $1,541 million, an increase of 74 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $974 million in 1977, was 57 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 34.4 thousand employees, an increase of 8 percent from 1972. The leading States in employment were Ohio, Colorado, Nebraska, and New Jersey, accounting for approximately 55 percent of the industry's 1977 employment. Data for Ohio, Colorado, and Nebraska have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

Establishments of single-unit companies in this industry with up to 20 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 1 percent of total value of shipments.

INDUSTRY 3069, FABRICATED RUBBER PRODUCTS N.E.C.

This industry comprises establishments primarily engaged in the manufacture of industrial and mechanical rubber goods, rubberized fabrics and vulcanized rubber clothing, and miscellaneous rubber specialties and sundries. Establishments primarily engaged in rebuilding and retreading tires are classified in service industry 7534, Tire Retreading and Repair Shops.

The total value of shipments for establishments classified in the Fabricated Rubber Products, N.E.C. industry amounted to $4,565 million in 1977, an increase of 61 percent from 1972. The value of shipments of products classified as primary to the industry was $4,223 million, an increase of 66 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were Automotive molded rubber mechanical goods, for which shipments increased 99 percent, and rubber compounds and mixtures, for which shipments increased 32 percent. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $2,352 million in 1977, was 50 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 98.5 thousand employees, a decrease of 1 percent from 1972. The leading States in employment were Ohio, Indiana, California, and Massachusetts, accounting for 47 percent of the industry's 1977 employment.

Establishments of single-unit companies in this industry with up to 20 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the

time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 3 percent of total value of shipments.

INDUSTRY 3079, MISCELLANEOUS PLASTICS PRODUCTS

This industry comprises establishments primarily engaged in molding primary plastics for the trade and fabricating miscellaneous finished plastics products. Establishments primarily engaged in the manufacture of fabricated plastics products or plastics film, sheet, rod, nontextile monofilaments and regenerated cellulose products, and vulcanized fiber are classified in this industry, whether from purchased resins or from resins produced in the same plant. This industry also includes establishments primary engaged in compounding purchased resins. Establishments primarily engaged in manufacture of artificial leather are classified in industry 2295, Coated Fabrics, Not Rubberized.

The total value of shipments for establishments classified in the Miscellaneous Plastics Products industry amounted to $23,688 million in 1977, an increase of 121 percent from 1972. The value of shipments of products classified as primary to the industry was $23,879 million, an increase of 115 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for a significant portion of this change were unsupported plastics film, sheeting, rods, tubes, and other shapes for which shipments increased 93 percent. Value added by manufacture, at $11,763 million in 1977, was 96 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 453.7 thousand employees, an increase of 31 percent from 1972. The leading States in employment were California, Ohio, Illinois, and New Jersey, accounting for approximately 35 percent of the industry's 1977 employment. Data for California have been withheld to avoid disclosing operations of individual companies. However, establishments counts and employment size ranges are provided.

Establishments of single-unit companies in this industry with up to 20 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 2 percent of total value of shipments.

Table 1a. Historical Statistics for the Industry: 1977 and Earlier Years

(For explanation of terms, see appendix A)

Year[1]	Companies[2] (no.)	All establishments: Total (no.)	All establishments: With 20 employees or more (no.)	All employees: Number (1,000)	All employees: Payroll (mil. dol.) - Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. [r]Revised. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results fo a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963,Census of Manufactures, vol. II, table 1 of the Industry chapter.

[2]For the census, a company is defined as a business organization consisting of one establishment or more under common ownership or control.

[3]Industry was defined or redefined for 1972 Census of Manufactures, so data are available only for years shown.

[4]Data for 1967 and 1963 were derived from Table 8, General Statistics for Establishments by Industry Specialization and Primary Product Class Specialization, in vol. II of the 1967 and 1963 Censuses of Manufactures. Separate data for other years are not available.

[5]Data either have associated standard errors exceeding 15 percent or are not consistant with other census series and related data; thus these estimates may be of limited reliability.

[6]Estimate for new capital expenditures has associated standard error of 15 percent or more and may be of limited reliability. Estimates for other data items are of acceptable reliability.

[7]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.

[8]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.

[9]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[10]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 1b. Selected Operating Ratios for the Industry: 1977 and Earlier Years

(For explanation of terms, see appendix A)

Year	Payroll per employee (dollars)	Assets per employee (dollars)	Production workers as percent of total employment (percent)	Annual hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials as percent of value of shipments (percent)	Cost of materials and payroll as percent of value of shipments (percent)	Assets as percent of value of shipments (percent)	Value added per employee (dollars)	Payroll as percent of value added (percent)	Value added per production worker hour (dollars)

Hawaii	-	8	3	AA	(D)	(D)	(D)	(D)	(D)	(D)	(D)	(D)	(NA)	(NA)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Statistics for some producing States are withheld to avoid disclosing figures for individual companies. However, for such States with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.
[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3a. Summary Statistics for the Industry: 1977

[For explanation of terms, see appendix A]

Item	Unit of measure	Tires and inner tubes (SIC 3011)	Rubber and plastics footwear (SIC 3021)	Reclaimed rubber (SIC 3031)	Rubber and plastics hose and belting (SIC 3041)	Fabricated rubber products, n.e.c. (SIC 3069)	Miscellaneous plastics products (SIC 3079)
Primary product specialization ratio[1]	percent	96	93	100	88	88	94
Coverage ratio[2]	do	99	99	62	92	90	91
All establishments	number	200	84	21	146	1 280	10 212
With 1 to 19 employees	do	74	34	12	43	659	5 827
With 20 to 99 employees	do	32	16	6	40	384	3 262
With 100 employees or more	do	94	34	3	63	237	1 123
All employees, average for year	1,000	114.0	19.8	0.9	34.4	98.5	453.7
Payroll for year, all employees	mil. dol.	1 832.4	159.1	11.8	457.4	1 164.0	4 911.7

Used capital expenditures	do	17.7	0.7	0.1	1.8	13.1	85.0

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.
[1]Represents ratio of primary product shipments to total product shipments (primary and secondary, excluding miscellaneous receipts) for establishments classified in industry.
[2]Represents ratio of primary products shipped by establishments classified in industry to total shipments of such products by all manufacturing establishments, wherever classified.
[3]Relationships are not meaningful because of predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.
[4]Minimum percentage; exact percentage withheld to avoid disclosing operations of individual companies.
[5]Data for value of shipments represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.
[6]Data for value of shipments represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.
[7]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 3b. Supplemental Industry Statistics Based on Sample Estimates: 1977

(For explanation of terms, see appendix A. For description of annual survey of manufactures (ASM), see appendix B)

Item	Tires and innertubes (SIC 3011)		Rubber and plastics footwear (SIC 3021)		Reclaimed rubber (SIC 3031)

End of year	779.5	2	(1,601.7)	80	9,013.8	1
Depreciation charges during 1977	38.6	2	118.2	5	700.3	2
Buildings and other structures	6.3	4	20.9	11	95.8	2
Machinery and equipment	32.3	2	97.2	4	604.5	2

Note: Data for total new capital expenditures, new building expenditures, new machinery expenditures, and total used expenditures are shown in table 3a, as well as in this table. The figures in table 3a are census universe totals and may differ from the annual survey of manufactures (ASM) sample estimates shown in this table. The figures in this table represent the best estimates of year-to-year change as measured by the continuing ASM sample. However, they are subject to sampling error and, hence, as estimates of level, are not as reliable as the universe figures shown in table 3a.

- Represents zero. (A) Indicates standard errors of 100 percent or more. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (X) Not applicable. (Z) Less than 50 thousand dollars.

[1]For a description of the standard error of estimate, see the section "Qualifications of the Data" in appendix B. Figures in parentheses have standard errors of 15 percent or more.

[2]This is a measure of the extent to which respondents reported for each item. It is derived for each item by calculating the ratio of the weighted employment (establishment data multiplied by sample weight; see appendix B) for those sample establishments that reported the specific inquiry to the weighted total employment for all sample establishments classified in the industry.

[3]The standard errors for the detailed categories of new machinery and equipment expenditures were not directly calculated. However, the actual figure is not expected to exceed the estimated figure shown.

[4]This category represents the total machinery and equipment expenditures for establishments that did not break down their expenditures for the three specific categories.

2,500 employees or more	-	2	(D)	(D)	(D)	(D)	(D)	(D)	(D)	(D)	(D)	(D)
Covered by administrative records[2]	E9	3 466	13.0	137.1	11.0	20.0	90.8	308.7	327.1	635.8	28.1	76.0

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. Data for this item are included in figures in parentheses above. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

[2]Report forms were not mailed to small single-unit companies with up to 20 employees (cutoff varied by industry). Payroll and sales data for 1977 were obtained from administrative records supplied by other agencies of the Federal Government. These data were then used in conjunction with industry averages to estimate the balance of items shown. Data are also included in respective size classes shown.

[3]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[4]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

[5]Four-digit industry totals for all items including establishment counts are not equal to sum of 6-digit subindustry figures due to difficulties in classifying a few establishments at subindustry level.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)

See footnotes at end of table.

Table 5a. Industry Statistics by Industry and Primary Product Class Specialization: 1977—Con.

[Table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. Measures of plant specialization shown are (1) industry specialization: ratio of primary product shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment; and (2) product class specialization: ratio of largest primary product class shipments to total product shipments (primary plus secondary, excluding miscellaneous receipts) for the establishment. See appendix for method of computing ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for various reasons; e.g., to avoid disclosing operations of individual companies. For explanation of terms, see appendix A]

Industry or product class code	Industry or product class by percent of specialization	All establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	New capital expenditures (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Hours (millions)	Wages (million dollars)

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. n.e.c. Not elsewhere classified. (S) Withheld because estimate did not meet publication standards. (X) Not applicable. (Z) Less than 50 thousand dollars or hours; under 50 employees.

[1]Data in value of shipments column represent value of production rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in finished products inventories between beginning and end of year.

[2]Data in value of shipments column represent value of work done rather than value of shipments. Consequently, formula for computing value added by manufacture was modified to exclude any change in inventories between beginning and end of year.

Table 5b. Industry-Product Analysis — Value of Shipments for an Industry and Primary Product Shipments, and Specialization and Coverage Ratios: 1977, 1972, and 1967

(An establishment is assigned to an industry based on shipment values of products representing largest amount considered primary to an industry. Frequently, establishment shipments comprise mixtures of products assigned to an industry (primary), those considered primary to other industries (secondary), and receipts for activities such as merchandising or contract work. Columns A-D show this product pattern for an industry, and column E shows primary product specialization ratio. The extent to which an industry's primary products are shipped by establishments classified in and out of an industry is shown in columns F-H and coverage ratio is shown in column I. For explanation of terms, see appendix A)

1977 product code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. Table 5c. Industry-Product Analysis — Shipments by Product Class and Industry: 1977

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

2293-	Paddings and upholstery filling	(X)	-	-	-	-	8.2	(D)	(X)
2294-	Processed textile waste	(X)	-	-	-	-	-	(D)	(X)
2295-	Coated fabrics, not rubberized	(X)	-	-	-	3.0	(D)	(D)	(X)
2381-	Fabric dress and work gloves	(X)	-	-	-	-	(D)	3.7	(X)

See footnotes at end of table.

Table 5c. **Industry-Product Analysis — Shipments by Product Class and Industry: 1977** — Con.

(Millions of dollars. Table shows where products of an industry (referred to as primary and listed in table 6a) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Only those product groups that have at least $2 million in shipments from establishments classified in one of industries included in this chapter are shown. Read across to determine where products of industries in this chapter are produced. To extent that some of primary products are made in industries not included in this chapter, value of such shipments is shown in "Other industries" column. Specified "Other industries" are listed at end of table if they account for more than $5 million of products primary to this chapter. For explanation of terms, see appendix A)

3079H 57	Picnic jugs, cooler chests, and ice buckets	(NA)	[13]96.2	45.7
3079H 61	Hardware	(NA)	18.8	21.8
3079H 63	Hospitalware	(NA)	81.9	(NA)
3079H 67	Laboratoryware	(NA)	56.8	(NA)
3079H 71	Individual packaging boxes and cases for consumer products	(NA)	[13]50.5	(NA)
3079H 73	Other consumer and commercial products, n.e.c.	(NA)	720.5	338.9
3079H 00	Consumer, institutional, and commercial fabricated plastics products, n.s.k.	(NA)	1,243.2	(NA)
30790 00	Miscellaneous plastics products, n.s.k., typically for establishments with 20 employees or more (see note)	(NA)	2,321.7	920.8
30790 02	Miscellaneous plastics products, n.s.k., typically for establishments with less than 20 employees (see note)	(NA)	635.8	274.8

Note: In 1977 Census of Manufactures, shipments data for establishments of small single-unit companies with up to 20 employees were estimated from administrative records data rather than data actually collected from respondents. Employment cutoff used for administrative records for each industry and shipments figures are included in code ending with "002." In both 1977 and 1972 Censuses of Manufactures, products not completely identified on standard forms were coded in appropriate product class (5 digits) followed by "00" or, in some cases, to appropriate product group code (4 digits) followed by "0 00."

- Represents zero. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable.

[1]Quantity and value reported by all producers of product, not just those with shipments of $100,000 or more.

[2]For some establishments, data have been estimated from central unit values, which are based on quantity-value relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figures: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[3]For 1972, product code 30113 09 was included with product codes 30111 12 and 30111 15.

[4]For 1977, product codes 30113 11 and 30113 17 were combined with product code 30113 35 to avoid disclosing operations of individual companies.

[5]For 1972, product code 30113 35 was combined with product code 30113 00 to avoid disclosing operations of individual companies.

[6]For 1977, product codes 30114 24 and 30114 27 were combined with product code 30114 26 to avoid disclosing operations of individual companies.

[7]For 1972, product code 30114 24 was combined with product codes 30114 26 and 30114 27 to avoid disclosing operations of individual companies.

[8]For 1972, product code 30693 17 was included with product code 30693 68.

[9]For 1972, product code 3069B 12 was included with product code 3069B 19.

[10]For 1977, product codes 30697 11 and 30697 31 were included with product code 30697 78.

[11]Value reported by all producers of product, not just those with shipments of $100,000 or more.

[12]For 1977, product codes 30796 27 and 30796 71 are combined with 30796 98 to avoid disclosing operations of individual companies.

[13]10 to 25 percent is estimated.

[14]Over 50 percent is estimated.

Table 6b. Product Classes — Value of Shipments by All Producers by Geographic Area: 1977 and 1972

(Millions of dollars. Product classes covered are those that are economically significant and whose production is geographically dispersed, provided dispersion is not approximated by data in table 2. Also, product classes are not shown if they are miscellaneous or "not specified by type" classes. Statistics for some States are withheld because they are either less than $2 million in product class shipments or they disclose operations of individual companies in 1977)

Product class and geographic area	Value of product shipments	
	1977	1972

- Represents zero. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.

[1]Figures are estimates derived from a representative sample of manufacturing establishments canvassed in annual survey of manufactures and, therefore, may differ from results that would be obtained from a complete canvass of all manufacturing establishments. Standard errors associated with estimates are published in annual survey of manufactures volumes for this period. Figures in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at individual product class level, estimates may be of limited reliability; however, they may be combined with other product class totals into broader aggregates which are of acceptable reliability.

Table 7. Materials Consumed by Kind: 1977 and 1972

(Includes quantity and cost of materials consumed or put into production by establishments classified only in this industry. For further explanation, see appendix A, Cost of materials)

1977 material code	Material	Unit of measure	1977		1972	
			Quantity[1]	Delivered cost (million dollars)	Quantity[1]	Delivered cost (million dollars)
	INDUSTRY 3011, TIRES AND INNER TUBES

970099	All other materials and components, parts, containers, and supplies consumed (see note)	.....	(X)	2,248.0	(X)	93,130.6
971000	Materials, parts, containers, and supplies, n.s.k.[4]	.....	(X)	2,190.0	(X)	778.6

Note: Supplemental data for code 970099 are presented in the 1977 Census of Manufactures subject series Report "Selected Materials Consumed."
- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. N.E.C. Not elsewhere classified. n.s.k. Not specified by kind. (S) Withheld because estimate did not meet publication standards. (X) Not applicable.

[1]For some establishments, data have been estimated from central unit values, which are based on quantity-cost relationships of reported data. The following symbols are used when percentage of each quantity figure estimated in this manner equals or exceeds 10 percent of published figure: * indicates 10 to 19 percent estimated, ** indicates 20 to 29 percent estimated. If 30 percent or more is estimated, figure is replaced by (S).

[2]For 1972, material codes 307903, 229604, 229607, 331003, and 332001 were included with material code 970099.

[3]For 1972, cotton tire fabric was included with material code 229601.

[4]Total cost of materials of establishments that did not report detailed materials data including establishments that were not mailed a form.

[5]For 1977, material codes 306980 and 281600 were included with material code 970099.

[6]For 1972, material code 306980 was included with material code 970099.

[7]For 1972, material code 307903 was included with material code 970099.

[8]For 1972, material codes 331001, 332001, and 307903 were included with material code 970099.

[9]For 1972, material codes 282104 and 307903 were included with material code 970099.

[10]From 1972 Census of Manufactures Supplemental Inquiry: Consumption of Materials, Parts, Containers, and Supplies During 1972 (Form MA-131).

7. Materials Consumed by Kind: 1977 and 1972. 26

DESCRIPTION OF INDUSTRIES

TANNING; INDUSTRIAL LEATHER GOODS; AND SHOES

This report shows 1977 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code	Title
3111	Leather Tanning and Finishing
3131	Boot and Shoe Cut Stock and Findings
3142	House Slippers
3143	Men's Footwear, Except Athletic
3144	Women's Footwear, Except Athletic
3149	Footwear, Except Rubber, N.E.C.

The industry statistics (employment, payroll, cost of materials, value of shipments, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments, but also their activities in the manufacture of secondary products as well as their miscellaneous activities (contract work on materials owned by others, repair work, etc.) This fact should be taken into account in comparing industry statistics (tables 1a-5a) with product statistics (table 6a) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5b, which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Small single-unit companies with up to 20 employees (the cutoff varied by industry), were excluded from the mail portion of the census. For these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated), data on payrolls and receipts were obtained from administrative records of other government agencies. The remaining statistics were developed from industry averages.

Establishment data were tabulated based on industry definitions contained in the 1972 Standard Industrial Classification Manual and its 1977 supplement.

INDUSTRY 3111, LEATHER TANNING AND FINISHING

This industry comprises establishments primarily engaged in tanning, currying, and finishing hides and skins into leather. This industry also includes leather converters, who buy hides and skins and have them processed on a contract basis by others.

The total value of shipments for establishments classified in the Leather Tanning and Finishing industry amounted to $1,456 million in 1977, an increase of 37 percent from 1972. The value of shipments of products classified as primary to the industry was $1,380 million, an increase of 34 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The products accounting for significant portion of this change were upper leather, excluding patent, for which shipments increased 51 percent, and sole leather, for which shipments increased 103 percent. Value added by manufacture, at $535 million in 1977, was 45 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 23.0 thousand employees, a decrease of 11 percent from 1972. The leading States in employment were Wisconsin, Massachusetts, New York, and Maine, accounting for approximately 45 percent of the industry's 1977 employment. This represents a shift from 1972 when Massachusetts, Wisconsin, New York, and New Jersey, account for approximately 45 percent of the industry's employment.

Establishments of single-unit companies in this industry with up to 10 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 6 percent of total value of shipments.

INDUSTRY 3131, BOOT AND SHOE CUT STOCK AND FINDINGS

This industry comprises establishments primarily engaged in the manufacture of leather soles, innersoles, and other boot and shoe cut stock and findings. This industry also includes finished wood heels. Establishments primarily engaged in the manufacture of heels, soling strips, and soles made of rubber, composition, plastic, and fiber are classified in Major Group 30, Rubber and Miscellaneous Plastics Products.

The total value of shipments for establishments classified in the Boot and Shoe Cut Stock and Findings industry amounted to $271 million in 1977, an increase of 31 percent from 1972. The value of shipments of products classified as primary to the industry was $255 million, an increase of 30 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $109 million in 1977, was 27 percent below value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 8.5 thousand employees, a decrease of 2 percent from 1972. The leading States in employment were Massachusetts, Missouri, and Maine, accounting for approximately 75 percent of the industry's 1977 employment. Data for Maine have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 8 percent of total value of shipments.

INDUSTRY 3142, HOUSE SLIPPERS

This industry comprises establishments primarily engaged in the manufacture of house slippers of leather or other materials.

The total value of shipments for establishments classified in the House Slippers industry amounted to $201 million in 1977, an increase of 33 percent from 1972. The value of shipments of products classified as primary to the industry was $190 million, an increase of 19 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) However, the quantity of house slippers was 78 million pairs shipped by all manufacturing establishments during 1977. This is 21 percent below the 1972 shipments figure of 99 million pairs. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $109 million in 1977, was 27 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 8.1 thousand employees, a decrease of 5 percent from 1972. The leading States in employment were New York, New Jersey, Pennsylvania, and Massachusetts, accounting for approximately 60 percent of the industry's 1977 employment.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 3 percent of total value of shipments.

INDUSTRY 3143, MEN'S FOOTWEAR, EXCEPT ATHLETIC

This industry comprises establishments primarily engaged in the manufacture of men's dress and casual shoes and boots and workshoes. Establishments primarily engaged in the manufacture of protective footwear and rubber soles vulcanized to fabric uppers are classified in Industry 3021, Rubber and Plastic Footwear.

The total value of shipments for establishments classified in the Men's Footwear, Except Athletic industry amounted to $1,735 million in 1977, an increase of 35 percent from 1972. The value of shipments of products classified as primary to the industry was $1,592 million, an increase of 35 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) The quantity of men's footwear, except athletic, was 109 million pairs shipped by all manufacturing establishments during 1977. This is 13 percent below the 1972 shipments figure of 126 million pairs. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $872 million in 1977, was 29 percent above value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 55.0 thousand employees, a decrease of 11 percent from 1972. The leading States in employment were Tennessee, Maine, Missouri, and Wisconsin, accounting for approximately 40 percent of the industry's 1977 employment. Data for Missouri have been withheld to avoid disclosing operations of individual companies. However, establishment counts and employment size ranges are provided.

Establishments of single-unit companies in this industry with up to 5 employees were excluded from the mail portion of the census. The data for these establishments (and a small number of larger establishments whose reports were not received at the time the data were tabulated) were obtained from administrative records of other agencies or developed from industry averages. These establishments accounted for 3 percent of total value of shipments.

INDUSTRY 3144, WOMEN'S FOOTWEAR, EXCEPT ATHLETIC

This industry comprises establishments primarily engaged in the manufacture of women's dress and casual shoes and boots. Establishments primarily engaged in the manufacture of men's footwear are classified in industry 3143, and rubber and plastic footwear in Industry 3021, Rubber and Plastic Footwear.

The total value of shipments for establishments classified in the Women's Footwear, Except Athletic industry amounted to $1,361 million in 1977, an increase of 1 percent from 1972. The value of shipments of products classified as primary to the industry was $1,387 million, an increase of 3 percent from 1972. (See the Introduction for a discussion of the difference between value of shipments for the industry and value of product shipments.) However, the quantity of women's footwear, except athletic, was 150 million pairs shipped by all manufacturing establishments during 1977. This is 30 percent below the 1972 shipments figure of 213 million pairs. The change reflected a general trend in the shipments of most of the products of the industry. Value added by manufacture, at $755 million in 1977, was 1 percent below value added in 1972. All dollar figures shown in this report are in current dollars; they are therefore not adjusted for changes in price levels.

In 1977 the industry had 57.6 thousand employees, a decrease of 26 percent from 1972. The leading States in

employment were Maine, New Hampshire, Missouri, and Massachusetts, accounting for approximately 45 percent of the industry's 1977 employment. This represents a shift from 1972 when Pennsylvania, Massachusetts, Maine, and New Hampshire, accounted for approximately 43 percent of the industry's employment.
